REGAL STRAIN WHITE WYANDOTTES

sweep the board at the New York State Fair, 1906. In competition with the winners at Madison Square, 1906, they win as follows:

1st and 3d Cock; 1st, 2d, 3d Cockerel; 1st Hen; 1st and 2d Pullet; 1st Breeding Pen (old); 1st Breeding Pen (young).

This is the only time in the history of the show that any exhibitor ever won 6 firsts in White Wyandottes, and my victory is all the greater owing to the fact that these winners are of my own breeding. A grand lot of stock for sale of the same breeding as the winners. Prices reasonable. Address:

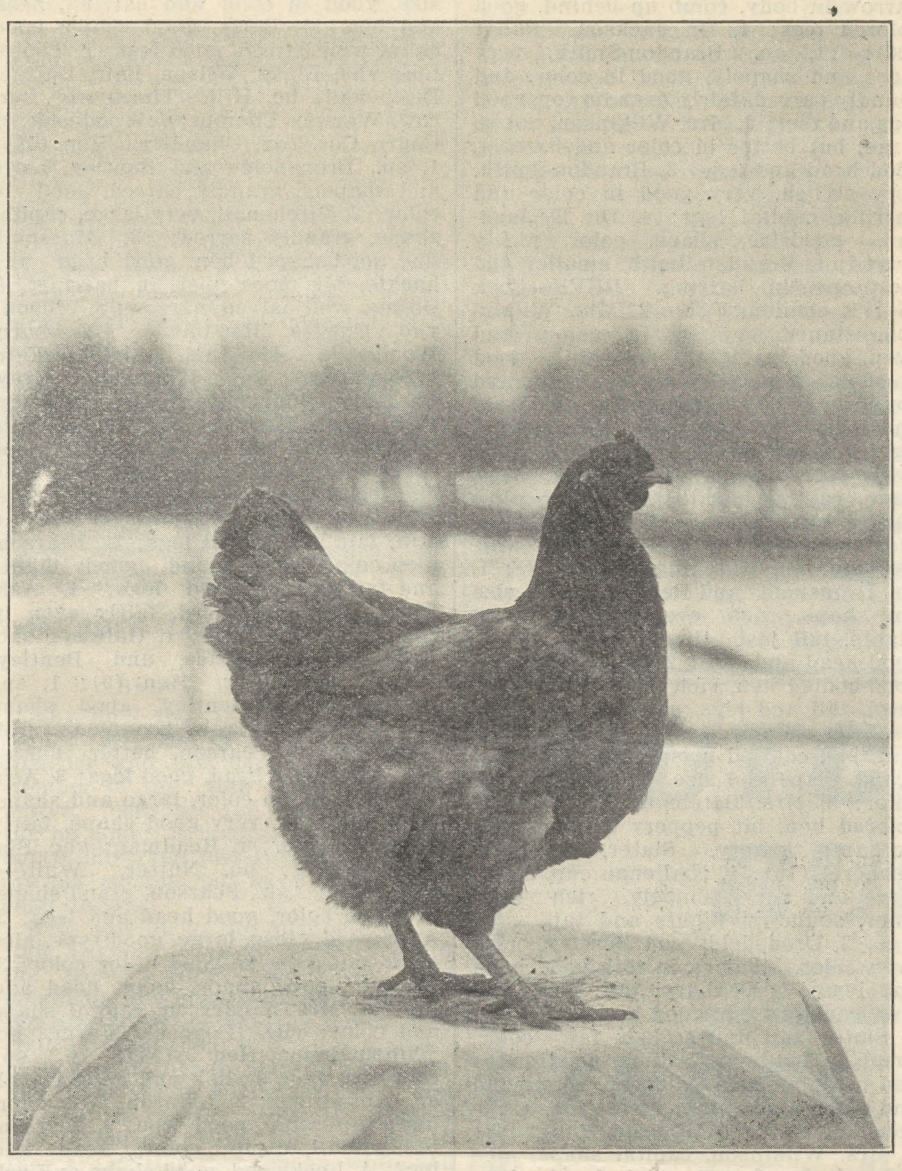
VOLUME XXVI JOHNSTOWN, N. Y., DECEMBER 5, 1906 No. 679

THE BUFF WYANDOTTE

By Henry R. Ingals.

There seems nowadays to be a great craze in the poultry world for new breeds, and anything new is heralded as the best ever and sells for a few years for big prices, and that seems to be what new breeds are made for, to catch those who have failed to breed good specimens of any of the older breeds; they think that something new will sell and so they will be able to dispose of any old thing they may be able to raise.



I think in the end there is more pleasure and more profit in taking up one of the old, well-known breeds and breeding them good. I know one of the very best varieties for the farmer or fancier is the Buff Wyandotte. I have handled many varieties of fowls, but these suit me the best of any I have ever bred.

The Wyandotte is the best general purpose fowl, and when you get the Wyandotte characteristics coupled with buff plumage you have a combination that means fowl for business or a fowl for the fancy. Buff fowls of all varieties are hardy and good winter layers. This is no idle claim. Just try Buffs alongside of Whites and the Buffs will more than hold their own. In setting forth the good qualities of the Buff Wyandottes I am not going to say anything to discount the popular White Wyandotte. There is no more popular fowl in this country than the White Wyandotte, and no one in his right mind will try to do them harm, for it is no use, and if I can convince anyone that the Buff is in every way as worthy of great popularity as the White, that is all I wish to do. I put forth the claim that the Buff is in every way the equal of the White and in some respects its superior, and back it up by experience with both fowls.

I find the Buffs to be hardier than the Whites and they mature quicker, and when it comes to forcing for laying they will stand heavy feeding, while the Whites seem to be more subject to bowel disorders and liver troubles and are much given to laying ill-shaped eggs with flaky and brittle shells. Such eggs never hatch. I have incubated hundreds of White Wyandotte eggs from several strains of stock and they have all shown the same defects. I suppose many think the Whites are easier to breed than the Buffs, but I am not so sure about that. I think it is more difficult to get a pure white bird with yellow legs and beak than it is to get a practically solid buff show bird. A flock of Buffs of course is never uniform in color, but when pens are made up they should be selected so as to have all the same shade in a pen. A flock of Whites will all be white and look more uniform, but what will give a man the genuine hen-fever quicker than a fine breeding pen of Buff Wyandottes? With their bright, clean, buff color, blocky shape and small, close combs, they are one of the handsomest and most attractive fowls bred. Buff birds always look clean, while white birds are sure to get dirty and look soiled, no matter how carefully they are kept. To show a White Wyandotte and have it white one has to resort to much washing and a certain amount of blueing, and some even go farther in order to make the birds white, while a Buff can be taken right up out of the run and put in the show coop and look all right. I have shown Buffs successfully for a number of years and never yet have I fitted a bird to show. Never washed one and many times have not even cleaned their legs. In many cases the birds had never been cooped, but were taken right from the pens and shipped to the show. I have never shown White Wyandottes, although I have some good ones; I never can find time to fix them up fit to show.

We all know that in the White Wyandottes we have one of the best and most popular fowls in the world and probably there is nothing better, but I feel certain that when it comes right down to business the Buff Wyandotte is fully its equal in every way. The latter is hardy, a natural winter layer, makes the best of broilers and mature market poultry and is in every way a very fine variety of fowl for farmer or fancier.

The Buff Wyandotte as a fancy fowl has its faults, one of the principal of which is faulty shape. It seems natural for breeders and judges to consider color before shape, for the fact is that color has been more looked at and worked for than shape. As a result our Buffs are off in shape in many cases. We have many fine shaped birds to be sure, but at the same time we find too many birds that are too long in the shanks and too straight on the back. Such birds, if carrying fine color, will win in the show room over better shaped birds that are not so good in color. Let us work a little more for the true Wyandotte shape. Poor combs are another thing we should try hard to overcome. The Buff Wyandotte seems to be subject to large and coarse combs. White in lobes is much too common, and I for one had rather have poor combs than white lobes on my birds. I consider a male with white in lobes as worthless, no matter how good he may be in other respects, that is, for a breeder. This fault is so common that the only way we can get rid of it is to never use a male that is not sound in lobes.

BUFF ORPINGTON PULLET.

Owned and bred by Gedney Farm, White Plains, New York.

Much has been said and written about how to mate Buffs. Some use double matings, or they call them that, but I never had a pen of breeders that didn't produce equal numbers of good birds of both sexes. I would advise small matings and the use of the very best birds of both sexes in the best breed pen, that is, Standard matings. If you have four crack good females and a star male, mate them together and let it go at that. Get just as close to the best color on both sides of the pen as you can and keep it up and you will not go very far wrong. Dark and light matings are no good or never have been for me; keep away from extremes in color. If you have a fine male that is too dark do not think that if you mate him to light hens you will will get uneven color, mottled birds, meally birds, and not what you expect.

Color is so well established now that breeders can pay more attention to shape and head points. These surely need looking after. Make the matings small and select; try for quality instead of quantity, for five good birds are worth fifty poor ones.

Fellow breeders of Buff Wyandottes, we have one of the very finest varieties of fowl in this country, and they are surely deserving of much greater popularity than they now enjoy. Can we not push them nearer to the front? We have a Buff Wyandotte Club, or did have once, and if we get a move on us we can have a good club again. In 1901-'02 the Buff Wyandotte Club had a large list of hustling members, but at the last club meeting held at Chicago last winter the list of members handed to the new secretary by the old secretary numbered 55, and there was not a cent of money in the treasury.

Something is wrong when in these days of progress such an organization as this dwindles away instead of increasing in size. The reason for the decline of the club is right here: All club specials are offered at one show and have been won by the officers of the club on several occasions.

Now, there is a large per cent of the club members who say the club is run for the benefit of a few. Personally, this makes no difference to me, but there are many who do not look at it as I do and for this reason it is best that the officers do not compete for

club specials during their term of office. A specialty club secretary has much to do and has to do it for nothing, and for the good of the club it is best that he keep out of club shows as an exhibitor; give no one an opportunity to criticise him and find fault with him for using the office for his own honor and profit.

I have shown Buff Wyandottes at many shows and never yet have I had a chance to compete for a club special, for the reason that none was ever offered at the shows where I exhibited. I could see special ribbons and cups and other prizes offered on other breeds by their clubs, but the Buff Wyandotte was not thus favored and advertised by its club.

Now, this is all wrong and the Buff Wyandotte will never be where it belongs until it gets a live club behind it, one that will advertise it at the shows by means of specials, ribbons, medals, cups, etc. Instead of putting the club's money all in one show for the benefit of someone who can afford to get up a big string of birds, let it be offered at a number of the smaller shows, and thus give the smaller breeders a chance for it. This, and this only, will get members and keep them. As it is now it is difficult to raise money for club specials, but much more could be raised among the small breeders if they knew they could get some of the benefit. Club affairs have been carried on too much on the political style; keep politics out of it, let every member work more for the club and breed and less for his own pocket and we will soon have a strong club that will be able to advance the interests of the Buff Wyandotte to such an extent that every breeder will see that it is for his interest to be a member. To encourage the faithful members of the club, it may be well to state that the membership is three times as large as it was one year ago, and that the secretary, W. C. Ellison, deserves the full support of all for his faithful service in the interest of the club, and I hope all who attend the annual meeting at New York in January next will see to it that he is retained in the office.

THE ROCHESTER SHOW.

Editor American Fancier:

The Great Rochester Show, January 22 to 26, promises to be greater than ever in more ways than one. Not only is the old guard there to make it great, but since the reorganization the nominal price of $5.00 per share has been the means of bringing in the multitude of smaller breeders and fanciers, and the interest manifested by these same breeders is a guarantee that Rochester will eclipse this season anything ever attempted in the show line in the Flower City. The list of specials promises to be great, as already enough has been secured to make any previous premium list appear small as compared with what will appear in 1907 issue. Another feature of the Rochester Show is the prompt payment of premiums. Thursday of show week means cash up, and everybody that is there and wants it gets his money. Visiting fanciers appreciate this fact by returning year after year. And speaking of judges, we have them right off the reel! Drevenstedt, Quilhot, and Billy Stanton, a trio hard to equal. The superintendent, Charley Augenstein, is a live wire, and any birds entrusted to his care will receive the best of attention and a safe journey home. Charley is a veteran in the handling of exhibits, having been there many a time. There will be but one show in Rochester this season. For premium list and further information, address F. A. Newman, No. 12 Seldon St., Rochester, N. Y.

G. W. WEBB.

PLYMOUTH ROCKS AND WYANDOTTES AT THE CRYSTAL PALACE SHOW, ENGLAND.

[From the Feathered World.]

ROCK CLUB SHOW (judges,Messrs. Crimes, Fleming, Taylor).—BARRED—Cock (8): 1, sp., Mrs. Wilkinson. grand size, shape and condition, sound in color and barring, good head, hackle, legs and feet, good win; 2, Brandon-Smith, very stylish and good in color, nicely barred all through, good head, best of legs; 3, Dr. Jackson, good in size and shape, capital color, not so evenly barred, bad fitting comb, capital legs; r, G.Jackson; vhc, Wilkinson; hc, Pennington; c, A. Ward; empty, Allonby. Hen: 1, challenge cup, 2-3, Brandon-Smith, winner grand in size and shape, evenly and soundly barred all through, capital head, second very large and grandly barred, not so rich in color, good head and legs, third not so large or good in her black, but very nicely barred; 4, G. Jackson, large, very sound in color and nicely barred, good head and legs; r, Sandercock. Cockerel (25): 1, challenge cup, Slater, large, grand shape and color, very sound in barring, good head, fine hackle, best of legs; 2, Brandon-Smith, very large and shapely, nicely barred to end of tail, good head, best of legs, close up ; 3, Garlick, not so large, capital color, beautifully barred, bit narrow in body, comb up behind, good colored legs; 4, Dr. Jackson. Pullet (26): 1, sp., Brandon-Smith, very large and shapely, good in color, and soundly barred, fairly even on top, good legs and feet; 2, Mrs. Wilkinson, not so large, but better in color and barring, good head and legs; 3, Brandon-Smith, very stylish, very good in color and barring, capital legs; 4, Dr. E. Jackson, goodsize, shape, color, nicely barred; r, Brandon-Smith, smaller and more open in barring. BUFF—Cock (8): 1, challenge cup, 2, Mrs. Wilkinson, winner very rich in color, and even, good in flights and tail, good head and legs, second very large, and sound in color, flights and tail, head and legs; 3, Bateman, even-colored light buff, not yet through mould, good head, pale in legs; 4, Wynne, very large, capital hackle and under-color, darker on wings; 5, Mrs. Sanderson, nice color, not so good in tail; vhc, Holding; hc, Hutchings. Hen (9): 1, sp., Dronsfields and Bentley, goood size and shape, rich even color, sound flights, tail just tipped with black, good head and legs; 2, Gush, low-built, good-bodied hen, rich even color, good head, tail and legs, close up; 3, Chippendale, shapely, even, deep-colored buff, bad colored legs; 4, Hutchings, grand shape and size, not so sound in color; 5, Mrs. Bateman, large, good-colored hen, bit peppery in tail; vhc, Latham; empty, Slater, Duxbury. Cockerel (13): 1, challenge cup, Gush, large and very shapely, rich even color, sound in flights and tail, good legs; 2, Dronsfields and Bentley, rich even color, bit dark in tail, good head and legs; 3, Duxbury, tall bright-colored cock, stylish, good head and legs; 4, Slater, tall and stylish, fair color, rough in feather; 5, Gush, good shape and color, fails in tail; vhc, Hammond and Milner, Bateman, Gush; c, Chippendale; empty, Wilkinson. Pullet (9): 1, Mrs. Wilkinson, capital shape, nice even shade of buff, good head, legs and tail; 2, Clater; 3, Dronfields and Bentley, good in shape, fairly sound in color; 4, Chippendale, tall, good color, not at her best yet; 5, Gush,fairly even in color, sound flights; vhc, Bignell; empty, Bateman. WHITE—Cock (14): 1, chall. cup, Mrs. Wilkinson, the second Manchester—should have won there, very large, pure in color, capital head and legs, wins well; 2, Peapack Farm, large and very pure white, good head and legs; 3, Slater, small, good color, head and legs, looks like the Dairy and Manchester winner; 4, Wilkinson, good legs and shape, very good in color; 5, Puttick, very stylish and good color, wants more substance, good head and legs. Hen (15): 1, sp., N. J. Peapack Farm, grand size and shape, pure in color, capital head and legs, well shown; 2, Dronsfield and Bentley, looks like the Dairy winner, now in good form, not the size and quality of the winner; 3, Slater, stylish, good color, good head, grand legs; 4, Bateman, good size, shape, color, head and legs; 5, Peapack Farm, grand size, shape, color, head, legs and feet; vhc, Gush, Salvation Army Farm; hc, Gush, Clabburn; c Puttick. BLACK—Cock (12): 1, sp., Edwards, capital shape, proper type, rich in his black, good head, capital legs; 2, Holmes, large and fairly good shape, good head and legs; 3, Holmes, tall, good type, fair legs; 4, Edwards, grand type, fair color, good legs; vhc, Odling, Hutchinson; not a sound-colored bird in the class. Hen (15): 1, Holmes, good shape and color, good legs; 2, sp., Dr. E. Jackson, close up, good shape and bright in her black; 3, Garlick, stylish and good; 4, Firth, good shape and color; r, Baines; vhc, Edwards, Holmes. NOVICE, Barred—Cock (35): 1, sp., novice cup, Rees, large and capital shape and color, beautifully barred, good head, fine hackle, good legs, wins well; 2, Airey, very good type, nice color, nicely barred, not so good on shoulder, capital legs; 3, Birdsey, smaller in size, good in color and barring, head and legs; 4, Batty, good shape, good color, well barred, good legs; r, Thornton; vhc, Blake, Wilson, Fair, Dutton, Birchenall; hc, Hill, Thornton, Burrow, Warren, Thompson, Woodcock; c, Court, Charlton, Chandler. Hen (52): 1, sp., Dronsfields and Bentley, large and shapely, grandly barred, good in color; 2, Birchenall, very large, capital shape, grandly barred; 3, Marsnall, fine good-shaped hen, good head and hackle, bit more open in barring; 4, Odling, well barred, narrow; r, Wilson; vhc, Cowles, Readman, Blackburn, Woodcock, Holding, Airey, Fair, Wroughton; hc, Readman, Airey, Chandler, Duncan; c, Court, Birdsey. Buff—Cock (12): 1, chall. cup, Smithson-Duxbury, tall and shapely, good even color, good wing and tail, head and legs; 2, Mrs. Sanderson, good size, style and color, not quite so good in fluff, fair head, good legs; 3 Pearson, nice color, fairly sound, good flights and tail, good colored legs; 4, Ashworth, fine large bird, fairly even in color, nice condition; r, Galway; vhc, Readman, Dronsfields and Bentley, Blake; hc Hunter. Hen (9): 1, sp., Dronsfields and Bentley, good shape and color, bit narrow, good sound tail, nice legs; 2, Pearson, better shape, nice color, fair head, good legs; 3, Ashworth, nice top color, large and shape-up; 4, Bignell, very good shape, fairly sound in color; r, Readman; vhc, Slater, Duxbury; hc, Nutter. White—Cock (10): 1,sp., Pearson, grand shape, size and color, good head and legs; 2, Appleyard, close, large, good type, nice color, not quite so good in leg color; 3, Gardner, good shape, color, head and legs; 4, Mrs. Sanderson, capital shape and color; vhc, Peapack Farm, hc, Whittingham. Hen (14): 1, sp., Gardner, very stylish and good in color, capital legs; 2, Johnson, nice color, loses in feather, good type; 3, Pearson, finely built, capital color, head and legs; 4, Lockwood, good shape and color; vhc, Russell, Odling, Sanderson.

WYANDOTTES (judges, Messrs. Preston and Stainthorp) came up splendidly, and never has there been such a show—close upon 800, and with very few exceptions all good birds. We have had occasion before to grumble at the way they are staged, and we protest against laced birds being penned so high that they cannot be examined; it is not fair to exhibitors nor to a judge to be forced to pull a trolley about to stand on before the birds can be examined. We suggest that the club take steps before another show to have this remedied. The classes were well filled with the exception of partridges, which were disappointing. What is the reason? Have they passed the height of their popularity, or what is it? Whites were grand, and the team penned by Mr. Goode were something to be proud of. Blacks were fair for a start, and might become popular. Novice classes, were full, although we noticed some old-fashioned novices exhibiting. We contend that these classes are for novices pure and simple, and cannot recognize as novices those who have bred Palace winners, although they may not have exhibited them. Taking it all round the judges did their duty well, and are to be complimented on their work. The laced classes were well handled, and we never heard less grumbling. Selling classes were big. SILVER—Cock (21): 1, cup, Bates, good well-laced breast, good bars and top, good head; 2, T. H. Furness, fair breast and top, fails wings; 3, Spencer, good top, fair breast and bars, neat head; 4, Guy,we liked for second place, good breast and top and bars, more like a cockerel, good head; vhc, Bates, Guy, Birchenall; hc, Guy. Hen (6): 1, Heath, well-laced, good color, nice hackle; 2, Bates, good black and white, neat head, well laced; 3, Pickles, large, well laced, grand color, good size and shape; 4, Furness, well laced, good color and shape, fails comb. Cockerel (16): 1, Spencer, good breast, grandly laced on thighs and hocks, nice bars, fair top; 2, Bates, had got torn, and was so disfigured with blood no notes could be taken; 3, Philipson, very good color,good breast and bars, neat head, a good bird; 4, Bates, cobby shape, grand wing and fair top, nice breast, bit spangled on thighs; vhc, Philipson, Bates, Spencer (2), Pickles; hc, Lockwood. Pullet (18): 1, cup, Heath, well laced, good black and white, nice shape, fails tail; 2, Philipson, good color and lacing, nice shape, neat head; 3, Maidment, full of quality, well laced, good color; 4, Spencer, quite young, good color and lacing, will improve; vhc, Heath, Philipson, Procter, Whittaker; hc, Love. GOLD—Cock (15): 1, cup, Furness, very big, good hackle and saddle, fair breast, fails bit on shoulders; 2, Heath, nice breast lacing, fair top and wing, also little dark on shoulders; 3, Spencer, good breast, nice wing and shape, fails little on top; 4, Alston, bright top, fair breast, fails wing, good shape; vhc, Kennedy, Goldsmith, Heathcote, bright good-breasted bird, well shown; empty, Mrs. Smith, Duxbury; pen 2241, Lloyd, wrong class. Hen (9): 1, Furness, shown in grand condition, well laced, good color, only fault dark hackle; 2, Duxbury, good lacing, nice color, good hackle; 3, Bates, very large, well laced, nice color, good head; 4, Heath, nicely laced, good wings and back, fails color breast; vhc, Kennedy, Walker; empty, Furness. Cockerel (23): 1, Brock, very big, grand breast, good top and bars, fails shoulders; 2, Furness, smart, good top, nice bars and legs; 3, Heath, good breast and wing, fair top, neat head; 4, Rogers and Kelynack, well laced, nice color, good hackle, neat head, nice bars; vhc, Bates, good breast and bars, a very smart bird; Goldsmith, Bates, very smart, nice top and breast; Foulkes, nice breasted; c, Brock; pen 2,241, Lloyd, wrong class. Pullet (26): 1, cup, trophy, Heath, smartly-shown pullet, well laced, good color, nice head; 2, T. H. Furness, nice lacing and color, good hackle, fails a bit on breast; 3, P. E. Furness, smart, nice top and wings, nice color, fails little at throat; 4, Bates, good shape and color,very nicely laced; 3, Kennedy; vhc, Heath, Bates, Kennedy; hc, Brock. WHITE—Cock (15): 1, well shown, wins; 2, Goode, good size, nice color and shape, neat head; 3, Goode, very similar, good legs and head; 4, Price, pure color and shape, bit pale legs; vhc, Salvation, Guy; hc, Price; c, Anthony; empty, Crabtree.

shape, neat head, looks a bit creamy; pure color, good legs; 2, Murland, good Hen (16): 1, Goode, large, good shape, 3, Anthony, very good quality and color, large and good shape, might have been highr; 4, Wright, nice shape and color, good head and legs, well shown; vhc, Hicks, Abbott Bros., Anthony; hc, Guy, Bell. Cockerel (24): 1, cup, Goode, very large, grand shape and color, neat head and legs; 2, Goode, grand shape and color, neat head, good legs: a bird we liked; 3, Roydon, bit high on legs, grand color, neat head; 4, Goode, pure color, nice head, bit high and narrow as yet; vhc, Heydon, Roydon, Price, Anthony; hc, Eaton, Heydon, Miss Osborne. Pullet (25): 1, Anthony, large, grand shape and color, wins well; 2, Bells, smart, nice quality and color, neat head, good legs; 3, Murland, nice shape, but small, fair color; 4, Harrington, large, nice color and shape, twisted hackle: we preferred pen 2,356, Goode, for second place, with 2,369, also Goode, for third; vhc, Goode; hc, Keene Bros., Peel. PARTRIDGE—Cock (9): 1, trophy, Wright, large, grand shape, grand hackle and saddle, shown grand bloom; 2, Wood and Son, fails hackle, nice saddle, good breast; 3 Burrow, good shape, fair top, ticked on thighs; 4, Turner, nice top, sound breast; hc, M. M. and L. G. Armstrong; c, Abbott Bros. Hen (17): 1, trophy, Wharton, grandly pencilled from throat to tail, even rich color, fails little in legs; 2, Wright, well pencilled, nice color; 3, Gunn, well pencilled, neat head, fails color to winners; 4, Wharton, softer color, large and fair pencilling; vhc, Goode, Wright, Abbott Bros., Holmes, a real good hen, and might have gone up a bit; hc, Abbott Bros., Lawton, Pinniger; c, Viscount Deerhurst. Cockerel (11): 1, Wharton, well grown, good top color, good striping, sound breast, wins; 2, Armstrong, sound color and good size, nice striping and good head; 3, Clay, pretty bird, good stripe and color, sound breast; 4, Bell, good top, shape, does not stand well, good breast; r, Mrs. Camp, good wing color, nice shape, fair top; vhc, Turner, good color on top, sound breast; hc, Mrs. Lounge. Pullet (11): 1, Wright, rather high in color, well pencilled, and shown in grand trim; 2, Wharton, large, soft color, good legs, well placed; 3, Armstrong, large very clean pencilling, nice color, good legs; 4, Foulis, nice pencilling, bad legs and dull in color; r, Holmes, as good color as any, nice clear pencilling; vhc, Minns, Abbott Bros., hc, pen 2,423, Archer, a real good pullet, and might have been in the money. SILVER PENCILLED—Cock (10): 1, sp., Wharton, large, good style, good top, neat head, good legs and breast; 2, Bromet, good shape, good clear top, sound breast, a good bird; 3, Wharton, large, good shape, sound breast, nice top, in good bloom; 4, Upwood Poultry Farm, good hackle and breast, fair top; r, Eaton, stylish, fair top, good breast, neat bird; vhc, Mrs. Gill, old, large, good shape and fair top, good breast. Hen (13): 1, sp., Wharton, good shape, well pencilled right through, nice color; 2 Eaton, well pencilled, very fair color, big tail; 3, Wharton, rather small, good color and pencilling, nice legs, pretty; 4, Wharton, best color in class, well pencilled, and might have been higher; vhc, hc, Miss Prior, Hunter Bros.; hc, Abbott Bros.; empty, Armstrong. COLUMBIAN—Cock (8): 1, Wright, large and good shape, fair hackle and color; 2, Armstrong, nice shape, neat head, wants striping and bit creamy on top; 3, Acomb, good shape and color, nice striping, fails comb; 4, Furness, small, fails color; empty, Buckland [2], Lowe. Hen (6): 1, Wright, good color and shape, nice hackle; 2, Armstrong, good shape and hackle, neat head, nice color; 3, Orr, nice and stylish, good color and fair hackle; 4, Buckland, good shape, color and hackle, a good bird; empty, Lowe. Cockerel (16): 1, Wright, large, fairly good color, fair hackle, good shape; 2, Armstrong, good color, neat head, good shape, we liked better than winner; 3, Marshall, good shape, fair color, neat head and good legs; 4, Mrs. Gill, any amount of silver, good head, fails color on top; r, vhc, Armstrong; vhc, Lowe. Pullet (15): 1, sp., Wright, pretty color and shape, good hackle; 2, Wright, larger, nice color, hardly so good shape; 3, Buckland, large, nice color, good hackle, neat head, good legs; 4, vhc, Entwistle Bros., 4th smaller, nice shape, fair color; r, Marshall; hc, Armstrong. BLUE LACED—Cock (10): 1, Restall, smart and pretty, good color and style; 2, Bromet, prettily-laced cockerel, sound tail and color, bit high in tail; 3, Thompson, fair color, nice breast, good shape; 4, Mrs. Hughes, fair breast, nice-topped old bird, hardly ready; r, Powell; empty, Ruck and Grant. Hen (13): 1, cup, Restall, finely and evenly laced, fails head, good color; 2, Bromet, pretty open-laced pullet, good flight lacing, fails comb; 3, Revell, nicely laced, bit dark color; 4, Bromet, little too dark in ground, good shape and well laced; vhc, Brown; vhc, Furness; hc, Powell. BLACK—Cock (15): 1, Miss Bury, large, good shape and color, fair legs; 2, Hicks, good color, neat head, little white in tail, fails legs; 3, Dean, good color and legs, white in tail; 4, Dean, small, nice body color, bad legs, we preferred 2,521, Edwards; r, Kirkham. Hen (22): 1, Kirkham, nice shape and color, good legs, neat head; 2, Heydon, good shape and color, nice legs and head; 3, Furness, big size, good shape, nice color, fair legs; 4, Edwards, bonny pullet, neat head, good color and shape; r, Wharton; vhc, Elliott, Kirkham, Dean, Prude; hc, R. W. Mackenzie, Knowles. NOVICE, Silver—Cock (16): 1, Walop, good breast and top, nice bars, wins; 2, Procter, nice breast and bars, fair top; 3, Holt, big, well laced, good bars, and fair color; 4, Sudbourn Hall Poultry Yard, nice breast, fair bars, fails top; r, Duncan; vhc, Ward, Browning; hc, Heritage. Hen (35): 1, sp., M. W. Philipson, large, well laced, good color; 2, Procter, small, nice color and lacing; 3, Thompson, well laced, good black and white, good head and legs; 4, Robb, pretty bird, well laced, good color and shape; vhc, Baily, Roper; hc, Baily 2, Lee, Hunt; c, Procter. Gold—Cock (13): 1, Wilcock, good breast and shape, nice top and bars, wins; 2, Ward, smart, well laced, good color and bars; 3, Procter, good color, well laced, good bars; 4, Smith, good top, nice breast and bars; r, Murland; vhc, Smith, Hyslop; hc, Upwood P. Farm, Pinniger, Hartley. Hen (15): 1, sp., Heys, big stylish pullet, grand color and lacing; 2, Weighell, good lacing, nice sound color, very fit; 3, Pinniger, nice top and wing, fairly good color, fails little in breast; 4, Thompson, good color, well laced, grand shape; vhc, Walop, Woodhouse, Procter; c, Ward, Russell. White—Cock (26): 1, Govey, pure color, good shape, neat head; 2, 3 Simpson, nice color, good cere, good head, old bird; 4, Wellington, good shape, good head and legs, nice color; r, Birchenall; vhc, Hale, Russell, Betts, Stanley, Herwell; hc, Dronsfields and Bentley, Primett. Hen (21): 1, Hale, large, good color and shape, neat head, and good legs; 2, Birchenall, large, good color and shape, nice legs; 3, Bullock, pure color, nice shape, rather small; 4, Miss Babcock, good size and shape, fails color; r, Primett; vhc, Hale, Douglas, Watson, Gathercole, Dronsfields and Bentley; hc, Spensley, Hon. Mrs. Stanley. Partridge—Cock (24): 1, Davis, big size, bright color, good saddle, fair hackle, good breast; 2, Stevens, good top color and breast, good legs and head; 3, Deeley and Challoner, nice hackle, good breast and legs, bit dark on saddle; 4, Mason, nice top, good breast and legs, good size; r, Watson, good breast and shape, fails top; vhc, Lockwood, Miss Dolben; hc, Wray Bros., Mitchell. Hen (39): 1, Brown, large, good shape, well pencilled, good color; 2, McIntosh, well pencilled, good color and shape; 3, Broadley, well pencilled, very good color and shape; 4, Viscount Deerhurst, good shape and size, nice pencilling, good color; r, Deerhurst, large, good color and shape, well pencilled; vhc, Hutchinson, Redfern, Davis, Mosely, Hill, Dudley, Pinniger; hc, Davis [2], Foulis, Cutts, Kirk, Deeley and Challoner, Corner, Lockwood. A. O. V.—Cock (11): 1, Hargraves Ball, beauty for color and shape, wins well; 2, Clarkson, large silver pencil, good top-color, sound breast, bit grey on thighs; 3, Darby, silver pencil, good breast and top, good legs, neat head; 4, Jackson, silver pencil, good top, nice sound breast; r, Challoner; hc, Baker. Hen (10) 1, Myres, good colored silver pencil, well pencilled, nice shape, fair legs; 2, Darby, silver pencil, good color and pencilling, fails legs, neat head; 3, Foulis, nice-colored silver pencil, bit small; 4, Fish, silver pencil, nice lacing, fails color; vhc, Orr, Marshall.

THE BUFF LEGHORNS ARE ON TOP.

By J. C. Eisenman.

Why do I like the S. C. Buff Leghorns? Because of their many good qualities and few defects. A fellow member of the Buff Leghorn club writes, "They are the coming breed." He, no doubt, is honest in his opinion, but is mistaken just the same. They are not coming, but have come and come to stay.

It is now up to the members of the Buff Leghorn Club to push them to the front. How? Convince your neighbors and customers that they are the best of all the chicken family, and don't be slow about it. If he is a neighborly sort of a chap, and can't or won't buy, give him a sitting of eggs and reserve the choice cockerel. Almost any of them will do that and think they are getting them cheap, while you won't lose anything in the transaction, and it is the most convincing argument I know of in favor of the Buff Leghorns. I have yet to meet the man or woman who has once raised them, that would change for any other breed, or drop them for any cause, unless they were going out of the business.

fed is truly something good. I have helped to eat fowls from pea fowl hens down to a young guinea, but would rather have a well-fed young Buff Leghorn than any domestic fowl I have ever tasted.

And the many fine eggs a few of them will furnish for the use of your family, or market, either! Almost any of the popular strains of Buff Leghorns will lay nine months in the year, and average two eggs every three days, and many of them will do even better than this if cared for properly. That is, if comfortably housed and given food that will enable them to produce eggs.

Much has been written in the past about the good qualities of our favorite breed, and no doubt many good things will be said of them in the fu-

Talk about their good qualities!—I don't know which to mention first. The old adage comes to my mind. The proof of the pudding is the eating thereof. That is it; the eating of a Buff Leghorn which has been properly ture.

But how few the defects they have as a class; so far I have learned only two, and they are easily corrected. Some say they are small? So they are, but they are the largest of the Leghorn family. They are not too small to lay an abundance of eggs, and if one is not enough for the family dinner, kill two. Others says they are wild and nervous. I am willing to admit they are nervous, but not wild.

The birds I raise myself are easily kept within a five-foot fence, and any of them will come to meet me when I approach them; while not pets, yet I can handle them in any way I wish. It depends largely on the way they are treated and handled when being fed. I find the brooder raised chicks more quiet and easier to handle than when raised with a hen.

Many mistake their natural activity for nervousness, and if given a chance to work, in their pens or yards, they will be contented, and the only secret there is in keeping them contented is to keep them busy, or give them free range, and then they will keep themselves busy. With a small amount of food morning and evening they will reward their owner, as I said before, with an abundance of fine, large white eggs. They are truly Buff beauties when well kept, and just as fine when dressed, plump as a partridge, and the beautiful yellow skin that most people want to see on a fowl when buying on the market.

So much said for the Buff Leghorn. Now, if you will bear with me yet a little while, I want to say something about the Buff Leghorn breeders. I can't help wanting to inquire how some of our "prominent" Buff Leghorn breeders can afford to sell 15 eggs for $1. Many of them advertise prize winning stock in their pens, and strains of blood which they claim come from some of our very best breeders. There is surely something wrong about this. Either they have not got what they claim, or they are not getting what it is worth. Just think of the time and care it takes to build up a strain of prize winners, and the great number of fowls that are only fairly good, not to say anything about the first cost of the fowls or eggs, or the cost of food in rearing them, and the interest on money invested in the plant, and other articles pertaining thereto, crates and cases, labor in packing, shipping and correspondence, and last but not least, the cost of printer's ink. I don't see how they can break even. I believe in every man getting a fair value for what he has to sell, and it is up to us, as Buff Leghorn breeders and members of the Buff Leghorn Club, to do all we can to advance the interest of the best breed on earth, and at the same time we are entitled to a rasonable profit, which we can honestly acquire by asking a decent price for our stock and eggs.

No one has done so much for the advancement of the Buff Leghorns as our worthy secretary, Hon. Geo. S. Barnes. Each member of the club should do all in his power to assist Brother Barnes in pushing to the front our Buff beauties. The club has issued an interesting book, which will be sent free to any one.

HUTCHING'S BUFFS

NOT ONLY WIN IN AMERICA BUT WIN

THREE RIBBONS

AT THE GREAT

GREAT CRYSTAL PALACE SHOW OF ENGLAND

JUST ASK

R. L. HUTCHINGS,

Breeder of Buff Plymouth Rocks,

RUTHERFORD, N. J.

The dates of the Washington, D. C., Show are January 22 to 26. It will be held at Masonic Hall, corner 9th and F street, under the auspices of the Columbia Poultry and Pigeon Association. The officers of the latter are, President, George E. Howard; vice-president, John R. Risdon; secretary, Calvin Hicks, Rockville, Md.; treasurer, Edward S. Schmid. The best of cooping and a good list of judges are promised.

* * *

The Central New York Poultry Association will hold its first annual show at Maennerchor Hall, Utica, N. Y., January 14 to 19, 1907. Mr. A. Jay Forbes is the secretary.

* * *

Mr. George W. Weed has been added to the list of judges at the Auburn Show. Secretary Scott informs us that the entries will be limited to two thousand birds at the latter, and that judging will begin promptly at noon of Tuesday, the eighth of January.

* * *

The special poultry institute conducted by Director F. E .Dawley, of the New York State Department of Agriculture, on Tuesday and Wednesday, January 8 and 9, at Auburn, N. Y., promises to be an interesting and instructive occasion and a good preliminary meeting to the big American Poultry Association gathering on Thursday of the same week. The program and list of speakers will be found on another page of this issue.

* * *

Wanted: a complete and authentic history of the American Dominique. We believe our old friend, Mr. Jesse G. Darlington, of Philadelphia, Pa., could shed some light on the early history of the first American standard-bred variety of poultry. Dominiques were bred near the Quaker City many years ago, and they were the real Simon-pure article, graceful of carriage, sprightly and active and remarkably useful fowls for the laying and market. Many of the Dominiques of to-day are counterfeits, in fact are nothing more than rose comb Plymouth Rocks.

* * *

Mr. A. J. Geis of Newark, N. J., has removed to Troy, N. Y., where he has accepted the position as auditor of the Hudson Valley Railway Company. Although Mr. Gies is out of the fancy temporarily, he expects to get a small farm near Troy next spring and start in breeding his favorite varieties of Bantams. Mr. Gies was one of the honor men in the recent U. S. Civil Service examination for poultryman of the Department of Agriculture, standing second, and is now number one on the eligible list.

* * *

The seventh annual show of the Rutherford Poultry, Pigeon and Pet Stock Association will be held at the City Hall auditorium, Rutherford, New Jersey, December 20 to 21, 1906. Entries close promptly on December 8. This is one of the leading and best conducted exhibitions held in the State of New Jersey. The officers and members are all fanciers of the very highest character, and when they "get a move on" there is something doing in the lively city located but a few minutes from little old New York. The special premiums are very tempting, many handsome silver cups being offered. Spratts will coop and feed the birds, and that means a first-class job. The judges are such famous specialists as D. A. Nichols, H. W. Smith, C. M. Smith and H. M. Pockman.

* * *

That good all-round judge, Mr. W. J. Stanton, has more engagements this coming season than ever before. His book is full for the months of December and January, in fact he has several shows in one week to handle on more than one occasion.

* * *

Conscientious work backed up by years of experience in handling all kinds of poultry, pigeons, pet stock, dogs and even sheep and swine, have made "Billy" Stanton what he is, viz: One of the very best judges on all varieties of the feathered tribe, as well as of the four-footed domestic live stock.

* * *

The friends of Mr. Richard Oke, and they are legion, will be pleased to learn that he is no longer a bachelor, but is now a happily married man. On November 21, Mr. Oke married Miss Priscilla Micheltree at London, Ontario, Canada. The wedding was one of the events of the year, as both bride and groom are very popular, the families of both being prominent in social and business circles. No better fancier, judge and good fellow exists in the poultry fancy of the United States and Canada than "Dick" Oke. We believe that all fanciers who know him will join us in wishing him and his good wife a long life of happiness and prosperity.

On another page of this issue we give a report of the Plymouth Rock and Wyandotte classes at the Crystal Palace Show of England, which will interest our readers in more ways than one. American birds were sent over to that great function and competed in the classes mentioned above. The report was taken from The Feathered World, England. The same paper, in speaking of the Turkey classes, remarks: "The classes came up very well indeed, except in Whites, and the Bonze were as well up in quality as yet seen at the Palace. The trophy winner is a grand specimen, and he is closely followed by one from New Jersey which does not look much the worse for his journey." In speaking of the awards, the Feathered World says: "Bronze cock (15): 1 and trophy, Abbott Bros., very large body, heavy bone and fine rich sheen; 2, c, Peapack Farm, New Jersey, immense size and wonderful color, with a fine rich metallic sheen and in lovely condition could have won." This is a good argument that the American bird gave the English turk and Peapack Farm should feel proud over this achievement. But the fact that the latter won on White Plymouth Rocks in a manner that should please all fanciers is well stated in the report found in Pigeons and Poultry, viz.: "White Plymouth Rock, cock 2d, Peapack Farm. Good color and shape, rather pale legs. Hen 1st and special, Peapack Farm, tremendous size, pure white color, good shape, wins easily, all the way from America. 5th (Peapack) a good white, grand shape, might have been higher." This is certainly going some and indicates what may happen in other classes at future shows. As Mr. Hutchings remarked when he heard that he won three ribbons on his Buff Rocks at the Palace: "I am happy, and next year will go prepared to give the best of them the battle of their lives." D. Lincoln Orr captured third hen in a strong Columbian Wyandotte class. The American birds arrived back Thursday, November 29, on the steamship Mesaba. The turkeys were especially glad, as it was Thanksgiving day and they had escaped the usual fate of their race. They will talk it over with "Uncle Tom" Rockham and Fred Huyler at Peapack Farm this week.

* * *

It is no small matter to get up a string, or even a few birds, to send across the briny deep. It means plenty of hard work and fine judgment. The American fanciers that did send birds, did it for the love of it and the good that will result from such action. It was a feeler and it panned out well. It will also close up the yaps of the skeptics and calamity howlers, that American birds stand no show in winning in foreign countries. Good birds will win anywhere and even under strange environments and under different standards. Poultry judges are human and liable to make mistakes, but they are honest and every exhibitor may expect his birds to receive fair and just treatment. The cases where doubt as to a judge's integrity and honesty exist are as rare as hen's teeth. It is to the credit of the English and American fancy that dishonest judges cannot exist for any length of time and once a man is found guilty of collusion with an exhibitor it is "all off" with him. We do hope that next season American fanciers will make a determined effort to send their birds, not only to the big Canadian, but to the leading English shows. The boys across the border and on the other side of the Atlantic will come back and we may look forward to the real international shows each year, with pleasure and anticipation.

* * *

It must be awfully nice to advertise "Champions of the World," and not lie about it.

* * *

That our readers may get a fair idea of the great Crystal Palace Show of England where nearly 10,000 pens of poultry and pigeons were on exhibition, we take the following comments from our esteemed contemporary Pigeons and Poultry:

"When these notes appear the first Palace Show under the management of the International committee will have become a thing of the past. It will have come and gone with all its hopes, its pleasures, its anticipations, and all its disappointments. Great Palace shows have been held in the past, but the one under notice has exceeded them all. Not only in being the greatest show the world has ever seen, but by reason of the most excellent manner in which it was managed. Not a few were those who, wedded to old associations, have thought the Palace shows of the past were as well done as one could expect a big show to be done, but the International of 1906 has removed all prejudice that existed in such men's minds. Never at any show, and our experience is wide, have we known such attention to be given to minute details. Why, even the judges were provided with pencils and rubber, and to each judge was given a typed list of instructions for him to hand to his steward.

* * *

"Tradition is woven closely at the Palace, and whilst preserving all that was good, the International committee have removed the objectionable features of the past, and given the Fancy a show managed by fanciers, for fanciers, and in such a manner that even the hyper-critical could not complain. The coming of the International to Sydenham has given the Fancy a great impetus, and huge as was the entry this year, we look forward to seeing 1907, and the years to come, to completely eclipse the mammoth show of this week. In fact, at the Palace during the show one heard expressions over and over again of great satisfaction as to the present, and many prophecies as to the future. Well might it be so, for the management was well nigh perfect, and on all sides one heard nothing but praise and commendation.

* * *

"Messrs. Thornton and Harrower are worthy of the encomiums which were so lavishly bestowed upon them at the judges' luncheon, and they, with Miss Thornton, who is, we should say, deserving of being bracketed with her worthy sire and the genial Pat as joint secretary, gave lavishly of their energy and experience to make the Palace Show of 1906 a record breaker in every respect, and admirably were they backed up by that most excellent of show managers, Mr. A. E. Sparrow. That the committee do not regard office as a sinecure, was to be seen by the large number who gave of their time and labor on each day of the show. To one and all are the thanks of the entire Fancy due in giving it a show which, in entries, in quality of the exhibits, and in management, has

eclipsed and left far behind all previous records.

* * *

"Lord Deerhurst presided at the judges' luncheon, and in a few choice, humorous remarks, proposed "The Judges," Messrs. Allsop and Bloomer responding. Mr. Thornton gave "The Palace Authorities," speaking highly of the manner in which the whole staff, from the manager downwards, had worked to secure the success of the show. Mr. Botham, the assistant manager, in responding, said it was the wish of the Palace Company to do their best for the International committee, and to make the show go through without a hitch. The Palace has passed through troublous times, and it was with the greatest regret that he and others had to think and speak of the unpaid prize money at last year's show. He trusted, however, that the Fancy would extend to the Palace authorities the application of that good old sporting proverb of never hitting a man when he was down. They hoped to pull themselves round, and he could assure them that as long as the Palace stood the staff would not be found wanting in their willingness to do all they possibly could to meet the requirements of the International Show.

* * *

"Col. Sandbach, in proposing the hon. secs., Messrs. Thornton and Harrower, spoke of their extraordinary zeal for work, of their powers of organization, of their grasp of detail, of their tact, and desire to please. Two better men, said he, could not be found for the post. Mr. Thornton in thanking the company for the manner in which the toast had been received, referred to the great assistance Miss Thornton had rendered, and said she was equal to any man in England at show work. He was a good man himself, and could take off his coat, but he was quite outdistanced by his colleague, who would take off his coat and everything else, and not only do a day's work, but a day and night's. Mr. Harrower, in reply, spoke of how they had been handicapped by late entries, and appealed to exhibitors, and especially to the specialist clubs, to help them in this matter. As to the working of the show, it had been run on amateur lines, and at the least expense. It was their intention so to run it, and he asked for the cordial co-operation of the Fancy in making the future of the International even greater than its past.

* * *

"Such a mammoth show entailed the expenditure of much judicial talent, and we should say that never before was such a band of men of skill, knowledg, and experience brought together at any fixture. They were of the country's best, and with what degree of skill and satisfaction to exhibitors they discharged their onerous duties, our very exhaustive report—which has been compiled most carefully by such a band of experts as has never before been heard of in Fancy journalism, over sixty specialist experts having kindly and generously assisted us in the compilation of the International report—will show, and we would take this opportunity of thanking them for their great services rendered to us and our readers for the benefit of the Fancy."

J. H. Drevenstedt

EAGERLY LOOKED FOR.

Editor American Fancier:

Your accounts of the races from the different districts are improving. If you keep it up, The American Fancier will be as eagerly looked for during the racing season as it is during the fall and winter show season.

J. F. KNOX, Race Sec'y.

Buffalo, N. Y., June 22, 1906.

MINNESOTA STATE POULTRY ASSOCIATION.

Twenty-First Annual Show, Minneapolis, Minn., January 15th to 23rd, 1907.

No poultry show in America has done so much to dignify the poultry industry, and bring its importance to the notice of the business interests of the northwest, as the show at Minneapolis for the past five years.

Every detail of the great show has been carried out upon the lines of strictest business integrity, and the show room neatness has been a marvel, wondered at by people attending from every state in the Union; over 20,000 people attended the show last winter.

Every premium, and obligation, has been paid before the close of the show, while the annual banquet at the rooms of the Commercial Club, given free of charge to all visitors, has been a social feature that is doing everything to promote good fellowship, and bring the breeders nearer to one another for an exchange of ideas of mutual benefit.

Secretary Loth expects to eclipse all former attempts this winter. The cash premiums have been doubled in every instance, and a third and fourth cash prize added, making by far the largest cash premiums offered by any association in America, to say nothing of specials, and twenty silver cups by the association, and nearly as many more with ribbons by specialty clubs.

In addition, the association will add fifty per cent. to the regular cash premiums in all classes where the entries reach a certain number.

Owing to a change of arrangements the time for closing the entries has been extended to midnight, Jan. 5th, 1907.

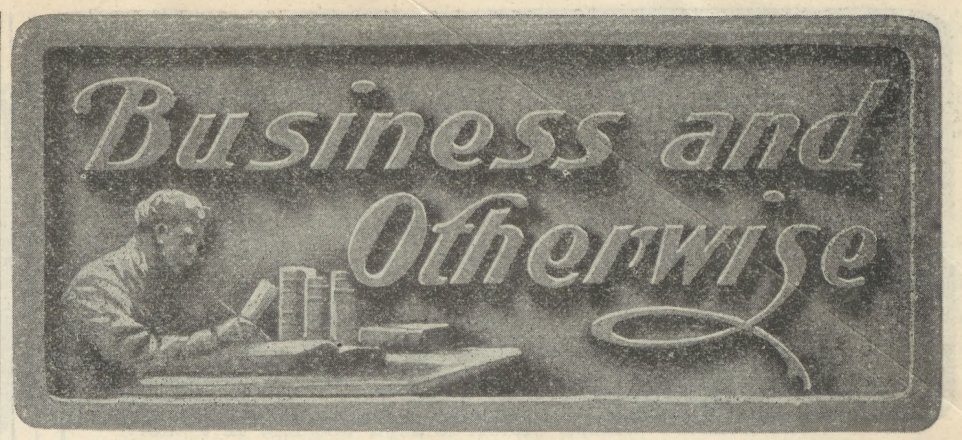
Premium list Dec. 1st.

Write George A. Loth, Sec'y. Box No. 47, Minneapolis, Minn.

AMERICAN ORPINGTON CLUB.

The sixth annual meeting of the American Orpington Club will be held in Madison Square Garden, N. Y., Thursday, Jan. 3, 1907, at 4 o'clock p. m. Every breeder of Orpingtons is cordially invited to be present.

The club offers ten beautiful silver cups for competition by its members at New York, and in addition will give a ribbon trophy for each first won by a member in competition. All applications with $1.00 fee received on or before Jan. 1st, 1907, will be entitled to compete for the club specials.



This, the parent Orpington Club, is in no way antagonistic to the specialty clubs, and every members of a specialty club should belong to the general organization. The club offers ribbons for competition by its members at every show in the U. S. and Canada, and they are well worth winning. We will be glad to welcome you, and full particulars will be sent if you will address,

WM. BARRY OWEN, Sec'y,
Vineyard Haven, Mass.
W. L. DAVIS, President.

BUFF LEGHORN CLUB MEETING.

The annual meeting and election of officers of the above club will be held in Light Guard Armory, Detroit, Mich., Saturday afternoon, Jan. 5, '07, at 2 o'clock. Every member that can is requested to be present.

The club is offering silver cups and ribbons at the leading shows this winter, and the interest in the Buff Leghorn was never greater. They have issued a new catalogue, which will be sent free to anyone asking for the same. Thos. Peer, president, Fairfield, N. J. Geo. S. Barnes, secretary, Battle Creek, Mich.

THE AMERICAN FANCIER

A Weekly Journal Devoted to Poultry, Pigeons and Standardbred Stock.

Entered as second class mail matter at the Post Office at Johnstown, N. Y.

J. H. DREVENSTEDT.....Editor

H. M. POCKMAN.....Associate Editor

SUBSCRIPTIONS.

Subscription, $1.00 per year.
Foreign subscription, $1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE

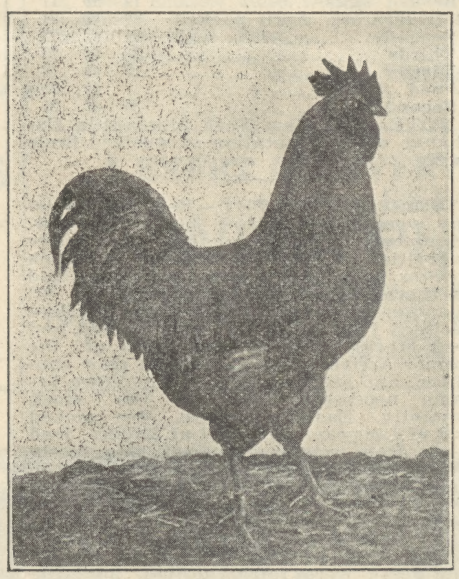
All matter, advertising or otherwise, must reach The American Fancier, Johnstown, N. Y., or 26 Cortlandt Street, New York City, not later than Monday afternoon of the week in which the same is to appear.

ADVERTISERS.

The advertising rate in The American Fancier is one dollar an inch for a single insertion. Rate card giving prices and discounts on quarterly, half yearly and yearly contracts sent on application.

CLASSIFIED AD RATES.

Forty-two words or less one time, fifty cents; three times, $1.00; thirteen times, $4.00; twenty-six times, $6.00; fifty-two times, $12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.



ISSUED BY THE AMERICAN FANCIER PRINTING & PUBLISHING CO.
EVERY WEDNESDAY.

Publication Office,
North Market St., Johnstown, N. Y.

Editorial Office,
Havemeyer Building, 26 Cortlandt St.,
New York City.
Telephone 6252 Cortlandt.

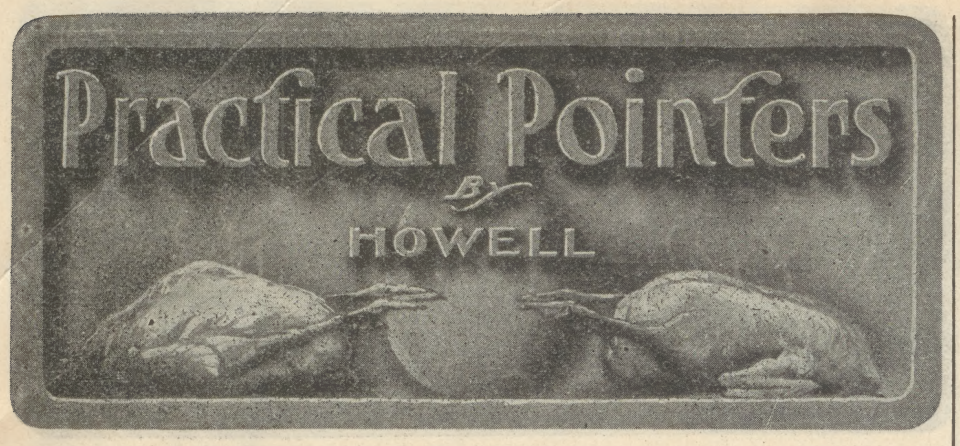
COLORED PICTURE FREE.

On the receipt of fifty cents we will send the American Fancier every week for the period of six months. This covers the coming show season, and as all shows, big and little, are reported each week in the American Fancier, readers will know who is doing the winning and keep posted. In addition to this we will present each new subscriber with a handsome colored picture, suitable for framing, free. This beautiful colored plate was made from a painting by Louis P. Graham of the Champion Buff Plymouth Rock Male in America. It is a work of art and should be in every collection of fine poultry pictures.

Beginning with this issue, the date of publication of the American Fancier will be Wednesday instead of Saturday each week. This change is made in order to get the American Fancier before our readers before Saturday of each week. We are simply following the custom of all other progressive weekly publications in printing and mailing mid-week. Advertisements will close in the future on Friday noon of each week.

Every breeder and exhibitor needs a new edition of the American Standard of Perfection. Price $1.50. Can be obtained from the American Fancier office.

The handsome colored supplement of America's great Buff Rock male, reproduced from Louis P. Graham's beautiful painting, can be had for ten cents. It's worth a handsome frame. Send a dime to the American Fancier office and you will get one by return mail.



We sell all the leading publications devoted to poultry, pigeon and pet stock culture. Send for a list.

Readers will oblige us greatly by sending personal news items of interest to this locality. It will get our readers in all sections acquainted with each other.

Secretaries of poultry and pigeon exhibitions will confer a favor by sending in their reports and awards as promptly as possible. We want the news when it is news.

Try a six line classified advertisement for a year. It costs less than twenty-five cents a week. It's a winner.

The best readers and fanciers are the best buyers. This is the class that patronize the American Fancier.

The readers of this journal are consistent, in so much as our utilitarian efforts are concerned, have never had them commended or condemned.

I believe the ex-president of the A. P. A. residing in this county, did object to a little praise bestowed upon a fellow mortal, but if ever a dish of crow was served regular in monthly installments as an accompaniment to his tabasco, he got his.

I often wonder if the Reliable Poultry Journal still carries the bird on the bill of fare for brother Orr's benefit.

I recently saw it stated by a contributor to an Agricultural Journal, that the Secretary of the American Poultry Association claims he received over two hundred letters from an article he wrote for a certain paper, but did not make a sale.

Now I do not suppose the Hon. Secretary wrote the article for the express purpose of receiving some free advertising, but rather, like the ex-President, with a desire to impart a little knowledge to the fraternity.

As to the statement regarding lack of results therefrom, I did not see the original and give it second handed for what it is worth.

What I started out to say before becoming side-tracked, is I wish some brother would break the silence long enough to tell us what is the matter with our hens.

There is a great deficiency in the egg supply, further, they do not look to be in laying form.

We have always made it a point of giving our personal attention to feeding all the stock and poultry on the place, but for the past month have let the help mix the morning mash and distribute part of it.

No hot water to moisten the mash has been used thus far this season, and these may or may not account for the shortage, although I hear the same complaint from many sources.

Perhaps I have too many irons in the fire, or as another old saying goes, "bit off more than I can chaw."

I do know however, aside from the mash feeding as spoken of above, my stock was never better cared for. The pens were put in shape early, and are well covered with litter, besides free range, they have been constantly supplied with fruit and vegetables, shell and grit, have had small grain in their litter regularly at noon, which just about covers the field as far as care goes.

The new house has been so long in the course of construction, I am afraid the stock will not do well on the cement floor which is drying all too slowly.

Have been thinking of dusting it with lime to absorb as much of the moisture as possible, before the litter is put on it.

A muslin front may prove to be a life saver in this case.

A cousin on an adjoining farm, succeeds well with Leghorns in a style of house that seems to be quite well adapted to egg production. Each house is 40 feet long by 12 feet wide. Each house is subdivided into two pens twelve by twenty, and fifty White Leghorns are placed in each pen, a fair sized yard is attached to each pen and no other liberty is accorded them. Each pen has one glass window and one covered with muslin which swings out and can be opened on sunshine days.

No attention is paid to fancy points. A fifty cent Leghorn looks as well to him as a five dollar one if she lays regularly.

At this writing a fair number of eggs are being gathered daily.

Was amused to read the experience of a certain party in breeding Leghorns.

He states he would raise five hundred, and out of the lot he would have perhaps one with a perfect head and shape, correct plumage, etc., and later, would discover he was "squirrel tailed," which, while it is discouraging, makes the good birds more valuable.

NEW YORK MARKET.

EGGS.—Receipts were 12,515 cases, a large proportion consisting of storage eggs from other markets. Eggs of new laid quality are still in light offering and firm at unchanged prices. Fair to medium grades overstock the market, and irregular prices have to be accepted to keep down accumulations. But few lots will pass the technical inspection required for firsts. Refrigerator eggs in local warehouses are held with confidence, but there is pressure to find an outlet for late receipts on docks. There were no call sales.

NOTE.—The New York Mercantile Exchange official quotation of western firsts is 32c.

DRESSED POULTRY.—Receipts yesterday were in the record breaking class, amounting to 15,883 packages. The heavy quantities of turkeys created a much weaker tone than existed Monday, and as there seemed to be pressure in all quarters to reduce accumulations prices declined fully 1c on both dry packed and feed stock. A large proportion of the former arriver more or less in poor condition, and struck green. It therefore became necessary to move the stock promptly. Eastern turkeys, dry picked and of fancy quality, sold at 22@23c. Iced stock from western sections was freely offered at 18½@19c. Out of town trade was largely supplied on Monday, and bulk of the trading was for local account. Iced fowls were easier at declines of about ½c. Large sizes of roasting chickens were in demand at steady prices. Ducks and geese were fairly active, but the range in prices was wider than the day previous.

I EXERT MY EVERY EFFORT IN BREEDING EXHIBITION

White Plymouth Rocks.

I have raised GOOD ONES, and have in my yards WINNERS at HAGERSTOWN, CLEVELAND, CHICAGO, and of many smaller shows. 677-689

ALEX. ROBINSON, Uhrichsville, Ohio.

The practical end of the pigeon fancy, squab breeding, seems to be very much in evidence at the present time; not only are large numbers of Homers being purchased in this country, but some are sending to the other side for their stock. The expense of importing is, to say the least, rather high and we cannot understand why such expense is necessary, as this country has as good a strain as is necessary to start in such a busin ss. Although flourishing at the present time, we hope it will not gain the same distinction as the Belgian Hare fancy did some years past.

Americans are quick to grasp a paying proposition, but there is a limit for the demand, and we hope the production of squabs will not equal the consumption, because if it does there will be many a squab plant for sale.

* * * * *

Mr. Wm. J. Stanton has declined to judge Carriers at the Garden this coming January. He thought Mr. Williams is well qualified to place these awards; he objects for reasons of his own.

This section at Madison Square Garden has been judged in years past, with the exception of last season, by the late D. E. Newell, and last year at the Garden Mr. Kennedy placed the ribbons. There is always plenty of excitement, a hard class to handle, owned by those who have plenty of German excitement in expressing their opinions after the awards have been placed, but this can't be the reason for Mr. Stanton declining.

* * * * *

Rutherford, N. J., Show entries close Dec. 8th and all interested in an exhibition, the largest in the State of New Jersey, where pigeons are well provided with specials, should make their entry.

* * * * *

Pleasant Valley Poultry and Pigeon Breeders' Association will hold its second annual show Jan'y 23-25, 1907. This exhibition takes place at Millbrook, N. Y.

* * * * *

We hear Providence has a good entry in the pigeon section. As usual at this exhibition, Fantails come up strong. The judges are Wm. J. Stanton and James Glasgow.

* * * * *

Owing to lack of number of round pens, Fantails cannot be penned in this style cage this year.

Fantails should always be penned in this manner, just as much as Pouters and Carriers. The corners of wire pens always crowd the bird's tail, often twisting the tail in a bad manner. In round pens this is overcome.

* * * * *

Turbits seem to be gaining in popularity. A more pleasing bird to the eye doesn't exist. The difficulty in proing ideal specimens should make is a most interesting variety to take up. Birds of quality of this variety do, and will always bring good prices. For the beginner in the fancy, desirous of keeping a variety where skill can produce a specimen worth many times what most varieties would bring, Turbits are that variety.

* * * * *

Grit is one of the most important things in the pigeon loft, and it is also one of the most neglected. It is quite impossible for pigeons to thrive long without it, and this is one of the chief reasons why people do not have the success in rearing birds.

It must be remembered that pigeons don't masticate their food and it is very essential that grit should be before the birds at all times.

* * * * *

The Westchester Poultry, Pigeon and Pet Stock Association will hold its first annual exhibition at White Plains, N. Y. The exact date, although not positive, will probably be the week ending Feb'y 2, 1907. Mr. Herbert R. Foshay will act as superintendent of the Pigeon Department. In selecting Mr. Foshay the association has obtained the services of a fancier well-known in Pigeon circles, and we are sure the Pigeon Department will be equal to any show outside of New York and Boston. Already Mr. Foshay is at work getting together a list of specials to be competed for in his department.

INTERNATIONAL (PALACE).

This record show opened on Nov. 13, and closed last night. Unfortunately, the opening day was foggy, so that the light was bad for judging. Everything was nicely arranged. Every judge was accompanied by a steward, and all the work carried out methodically and quietly. The secretary, Mr. Thornton, and his indefatigable daughter were superintending all the show, ably aided by a host of stewards, marshalled by Mr. Harrower and Mr. Sparrow. Further notes will be found in the "Here and there" columns.

MAGPIES (judge, Mr. F. Warner).—BLACK—Cock (26): 1, Hughes, very nice-shaped head, good length of face, nice eye and coral cere, long fine snaky neck, lustrous color, good style; 2, Bracey, first-rate head, eye, cere and length of face, good neck, may be a shade fuller at back of skull than winner; 3, McCreath, good-shaped head, a bit paler in face and cere, on the long side in feather; r, Webster, nice and fine in head, good neck, hardly so rich in color; vhc, Sutliffe, very similar to reserve; vhc, Bracey, nice head and neck, but a little full in throat; Hughes; hc, Dr. Rutherford, Brook; empty, Frew. Hen (18): 1, Hughes, very nice fine head, good shape, clear white eye, coral cere, nice length of face, A1 rich color, rather dark at tip of beak; 2, McCreath, extra good color, stained beak, nice length of face, good head, shape and style; 3, Bracey, first-rate shape and style, grand head and neck., but longish in feather; vhc, Spence, extra rich color, very nice head, neck and style, a good one; vhc, Cooke, Hooker, two stylish birds, with good heads and necks; hc, Rorrison, Parker, Webster, Dickinson. Bred '06—Cock (30): 1, McCreath, grand color and markings, very fine in head, good shape, eye and cere, nice length of face, reachy, nice neck; 2, Brook, extra nice length of face, good neck and head, fails a little in color to winner, still good all round; 3, Hughes, extra good color, nice head, eye and cere, a trifle full in throat under beak; vhc, Saunders, MacLaren, Goddard, Hughes, Frew, Cooke, an extra good one all round, Rorrison, also silver spoon; hc, Duggleby, Bracey; empty, Hayman, Gunn, also McCreath. Hen (26): 1, two medals, sp., challenge cup, Hughes, extra rich bright color, nice size, shape and style, very fine good-shaped head, grand cere, eye and length of face, almost clear, white beak; 2, McCreath, a little stouter in body, good neck and head, very small cere, good color eye and style; 3, McCreath, very good all round, hardly so reachy; 3, Cooke, a bit full at the back of head and paler in cere; vhc, Bracey, nice length of face, good head, nice and fine, good neck and style: I prefer this to previous; vhc, Duggleby, Stevens, Webster; hc, Sutcliffe Goy, Hughes, Currie, Hooker, Shillingford, Rorrison; empty, Thompson. RED—Either Sex (15): 1, sp., Bulley, very nice fine-shaped head, fine style, good color, A1 fettle; 2, Scott, nice head, eye, cere, and neck, close up; 3, Bracey, extra nice color, long thin neck, good head, not quite so straight in face; r, Bulley, rich color, good head, a little shorter in face, nice body; vhc, Rorrison, nice length of face, good neck and style, fairly good color; vhc, Webster [2], Brook, Hooker, Shillingford. Bred '06—Cock (11): 1, Goddard, very nice rich even color, good-shaped head, nice eye, neck and style; 2, Bulley, good head, neck and style, bit bigger in body, a shade down faced; 3, Bracey, very nice style, neck and reach, a trifle full at back of head; r, Breddy, rather nice in head, neck and color, not as clean as might be; empty, Bullmon, Webster, Brook, Frew. Hen (13): 1, medal and silver spoon, Bracey, nice fine head, good shape, color and length of face, nice long thin neck, stylish; 2, Bracey, nice long thin neck, good color and style, little flat on top of head; 3, Brook, good-shaped head, snaky thin neck, quite equal to second, and I liked the top of the head better; r, spoon, Rorrison, good color, nice head and neck, little down faced; vhc, Shillingford. YELLOW—Cock or hen (17): 1, Bracey, very good-shaped head, nice length of face, good neck, nice color, stylish; 2, Gage, very good rich color, nice head, eye and neck; 3, Shillingford, extra rich even color, fairly good neck, a little full under beak, nice head; vhc, McCreath [2], Bracey [2]; hc, Honeybone, Bracey. Bred '06—Cock (20): 1, Shillingford, nice head, neck, eye and cere, good color, nice all round; 2, Bracey, very similar, close up; 3, McCreath, rich even color, but a bit stouter all round; vhc, Gage, nice color and style, fails a little top of skull; Neave, very similar; hc, Bracey, Hooker, Rorrison. Hen (19): 1, sp., spoon, McCreath, grand head, neck, style and color, not so clean as may be; 2, Shillingford, nice-shaped head, nice eye and cere, hardly so long in face, but well shown; 3, Bracey, very good-shaped head, paler in cere, slightly-stained beak, good style and neck; r, Bracey, very good head, eye and style, thin neck, not long; vhc, Gage, Eames, McCreath, shade flat on top of head, otherwise A1 all round; hc, spoon, Hutchings, Shillingford. BLUE—Cock (15): 1, spoon, Dickinson, good head, eye, cere and neck, longish in feather, good color; 2, Heap, fairly good head, color and style, a little full in throat; 3, Dickinson, good-shaped head, eye and cere, might be longer in face; vhc, spoon, Webster; vhc, McCreath; hc, Bateman, Rose. Hen (18): 1, Watson, very nice-shaped head, good color, clear beak, in grand fettle; 2, McCreath, good eye, cere and top of head, a shade full under beak; 3, McCreath, very good head, nice eye and length of face, stylish; r, Heap, nice and fine in head, stylish; vhc, Capon, a good head, eye and cere; Dickinson, bit full at the back of head, nice color; Hooker, nice fine head; Shillingford; hc, Bulley, Eames, Heap. SILVER—Cock (12): 1, Hooker, nice stamp all round, in A1 fettle; 2, spoon, Eaton, nice head, fair neck, good color; 3, Hooker, good length of face, shade flat on top of skull; r, Read, good head, stouter in neck; vhc, Bulley. Hen (14): 1, spoon, Hooker, very good all round, nice head, eye, cere, style and reach; 2, Hooker, similar and close up, nice and fine in head; 3, Eaton, good head and color, a bit large in cere; r, Parker, good-shaped head, nice eye and cere, fine, but shorter in neck; vhc, Provost, Heap, hc, Rose. DUN (13): 1, sp., Cocke, cock, nice shaped head, but a bit large, nice neck and style, good color; 2, Cooke, smart hen, good long neck, style and head; 3, spoon, Stevens, hen, good head, little throaty; vhc, Watson; hc, Clark. A. O. C.—Cock (11): 1, spoon, Bracey, a pretty cream, nice-shaped head, fair good neck and style; 2, Bulley, smart cream, if anything the best-shaped head; 3, Rose, good head and style, little full under beak; vhc, Eames, Shillingford; hc, Stevens. Hen (7): 1, spoon, Lamb, a very pretty cream, nice neck and style; 2, Bulley, nice cream, well shown, close up; 3, Shillingford, another cream, fair head, good length of face; r, Cooke, a cream, a bit stouter, but paler in cere. MISMARKED or STOCK.—Cock or Hen (20): 1, McCreath, black, slightly mismarked, A1 head, neck and style, rich color; 2, Bracey, slightly mismarked, grand style, head and reach, little paler in cere; 3, Heap, black, very fine in head and neck, a little flat on top of skull, otherwise A1; vhc, Webster; hc, Bracey, Cooke, Shillingford; empty, Headington. SELLING, Black, £2 (16); 1, Harbottle, good head and style; 2, Shillingford, nice head and reach; 3, Rorrison, stylish good color; hc, Webster, Headington, Cook; empty, Hooker. A. O. C.—, 40s. (16): 1, Bracey, a smart yellow; 2, Gage, also yellow, good head and color; 3, Heap; red, little stouter in head and neck; r, Stevens, a smart dun; vhc, Cook, Rorrison; hc, Stevens, Hutchings, Shillingford, Breddy. A. C., 20s. (23): 1, McCreath, fair-headed black; 2, Cooke, black, good head and color; 3, Dickinson, fairly good blue; r, Headington, black, fair head; vhc, Duggleby, Gage, Harbottle; hc, MacLaren, Bracey, Rorrison, Hughes.

FANTAILS (judge, Mr. House) had eleven classes allotted to them, and brought together an excellent collection, quality being of the very best. WHITE, Bred Prior to '05—Cock (13): 1, Gray, small, nice shape, grand style and carriage, good tail, nice trim; 2, Harrower, splendid tail, good shape, style and motion, nice trim; 3, Coupland, small, splendid flat tail, good carriage and motion, nice trim; vhc, Marshall Harvey, Stevenson; hc, Cook Bros.; c, Harrower. Hen (17): 1, sp. No. 13, Harrower, very smart little hen, good tail carriage and motion, nice form; 2, r, Harrower, small and stylish hens, both of excellent quality, and fit; 3, Cook Bros., very small, excellent, nice style and shape, in splendid trim; vhc, Gray, Stevenson; hc, Gray; c, Stevenson. Bred '05—Cock (13): 1, c, Bray, very small, large flat tail, good body and shape, capital carriage and motion; 2, 3, vhc, Stevenson, a really splendid trio, all of the well known Willie style, small, grand tails capital carriage and motion, a very tight run for first place; r, vhc, Marshall Harvey; hc, Harrower; empty, Feuvre, Gray. Hen (18): 1, sp. 17b, 2, 3, Stevenson, a trio of really splendid little hens, excellent quality, being very small, splendid tails, carriage and motion, and capital shape and style, put down in tip-top form; r, vhc, hc, Cook Bros., these are also a really splendid pair, both of nice quality, fit; vhc, Marshall Harvey, Feuvre; hc, c, Gray; passed by judge, Evans. Bred '06—Cock (16): 1, 2, c, Stevenson, very

small, nice quality, grand body and shape, very fit, excellent tails, grand carriage and motion; 3, r, vhc [2], Gray, very nice team, all of which were very fit, small, nice shape, capital tails, nice style and motion; hc, Foster; empty, Feuvre. Hen (18): 1, sp. 17a, hc, Harrower, very smart and stylish little hen, capital, nice carriage and motion, in tip-top form; 2, 3, r, vhc, Stevenson, again very smart set of little hens, splendid tails, grand shape and style, in splendid trim; vhc, Feuvre; hc, Gray; c, Deekes and Deekes. BLUE (19): 1, Harston, very small, grand color, nice head, good shape and feather, capital carriage and motion, in nice form; 2, hc, Brown, nice color, capital body, shape and feather, nice tail, good carriage and motion, in splendid form; 3, Brown, nice color, small, good tail, nice carriage and motion, very fit; r, hc, Gray; vhc, Gordon Bros.; Hancock; hc, Brown; c, Feuvre. BLACK (15): 1, Macaulay, a gem, splendid rich color, nice head, good shape and feather, very small, capital, nice carriage and motion; 2, Moodie, very small, rich color, grand head, shape and feather, good flat tail, nice carriage and motion, well shown; 3, vhc, Kerr, small, nice color, grand shape and style, capital tail, very fit; r, Elsam Bros.; hc, Judson; c, Bird. SADDLE (25): 1, sp., No. 15, Stevenson, here Willie brought a fresh one out of pickle, a late-bred last year's youngster, grand silver saddle, very clean, extra small, good head, body and shape, with a capital tail and nice carriage, very fit; 2, Gray, rich-colored red, nice head, body and shape, good tail, nice carriage and motion; 3, Gray, rich-colored yellow, capital tail, good shape and feather; r, vhc, Feuvre; vhc, Gray, Poupard, Stevenson, Feuvre; hc, Gray, Feuvre; c, Bird. RED or YELLOW (17): 1, 3, vhc, hc, c, Murray, very smart little yellow, rich color, good head, body, feather and shape, capital flat tail, third red, splendid color, large uat tail, good carriage and motion, nice form; 2, r, Ingman, rich-colored good-headed yellow, nice shape and feather, good tail, very fit; hc, Smith. A. O. C. (8): 1, sp., Harrower, splendid silver, nice color, very small, nice body and shape, capital tail, good carriage; 2, vhc, Gray, white frizzle, good style and carriage, good tail and motion; 3, Murray, silver good head, rare shape and feather, capital form; r, Gray; hc, Foster.

THE WASHINGTON SHOW.

The Columbia Poultry and Pigeon Association of Washington, D. C., will hold its first show in the Masonic hall, corner Ninth and E. St., N. W., Jan. 22d to 26th, inclusive, 1907. A very attractive premium list will soon be out, and no fanciers of the feathered tribe can afford to miss this great show. We will have the best of cooping and good judges to place the awards.

The officers are George E. Howard, president; John R. Risdon of Hyattsville, Md., vice president; Calvin Hicks of Rockville, Md., secretary; Washington Waters of Rockville, Md., assistant secretary; Edward S. Schmid, treasurer.

For premium list and entry blanks, address Calvin Hicks, Rockville, Md.

CORRECTION.

Editor American Fancier:

I see by your first page cover of the American Fancier of November 17th that you credit the bird of Mr. Alex. Robinson of Ulrichsville, as being first White Rock cockerel at Hagerstown, 1906. I beg to state that my bird had the honor of winning that coveted honor, and is still owned by me and will be exhibited next week at the Bridgeton, N. J., show, where I hope he will still retain his prestige. Please correct this error for the credit of my bird and myself.

CORNISH INDIAN GAME CLUB.

Editor American Fancier:

Within the year, I think you have twice made inquiry regarding the resting place of the old Cornish Indian Game Club of America, of which, if memory serves me right, Messrs. Sharp, Drevenstdet, Thompson, Templeton and Whiting were secretaries, successively, and in reply to your little editorial note in your issue of Nov. 17th, I desire to say that since I have not heard of an election since he was elected to succeed himself, I presume Mr. C. S. Whiting of Corfu, N. Y., is still secretary and treasurer. About all I can report is not very satisfactory. When Mr. Thompson turned the work over to me, there were something like sixteen or seventeen dollars on hand and twenty members in good standing. During the year, I think I secured forty new members and was able to turn over something like $45 to my successor, Mr. Whiting, and he also received about $40 of the association funds from former Secretary Drevenstedt. Part of these funds were expended for specials at the Pan-American Exposition and possibly for a cup, each, at New York and Chicago the following winter, but the remainder, I may hope, is still in the possession of Mr. Whiting and it may be that he has received considerable more as annual dues since that time.

Now, I dislike to mention this matter, since the new Cornish Indian Club of America may be doing all right and it is needless to have two clubs, and if the old club has no members with dues paid up in full, why could not the old club disband and turn over the funds to the new club?

W. S. TEMPLETON.

Dakota, Ill., Nov. 21, 1906.

AUBURN'S BIG SHOW.

Editor American Fancier:

The great A. P. A. show for 1907 will be held at Auburn, N. J., Jan. 7-12, with the Auburn Fanciers' association. The premium list will be issued about Dec. 5th and the entries will close Dec. 22, 1906.

The hall will be open for the reception of birds Monday, January 7th, and the judging will commence Tuesday at 12 o'clock (noon). The entries will be limited to two thousand birds. Fourteen well known judges have been engaged to place the awards. The Empire Cooping Co. will furnish the coops. Hon. F. E. Danley will hold poultry institutes in the Y. M. C. A. Hall Tuesday and Wednesday, Jan. 8th and 9th, and the annual meeting of the American Poultry Association will hold their very important meeting in the same hall commencing Tuesday, Jan. 10th. All members of the A. P. A. and exhibitors may make arrangements at the following hotels, at prices stated: Osborne House, $2.00, $2.50 and $3.00; Avery House, $1.50, $1.75 and $2.00; Hotel Majestic, $2.00; Hotel Brunswick, $1.00.

J. H. SCOTT, Sec'y.

AMERICAN DOMINIQUES.

Editor American Fancier:

Having become interested in this variety of poultry, which it is claimed is one of the oldest of the American breeds, I wish to learn more of its origin and history. It has occurred to me that you or some of your readers can supply much of interest regarding the Dominiques.

When and where did the Dominique have its beginning in this country? From what country of Europe was the variety brought? Why was the breed called Dominique? Is the modern Dominique at all the same as the breed our grandmothers had? If not, in what respects does it differ? Has the modern American Dominique been brought to its present state by careful selection and breeding only, or has the blood of other varieties been used to produce the modern type? If so, what crosses have been used?

Is there any literature in existence that gives the history of the breed? I find that the breed now called American Dominique is fully equal to any of the newer made varieties as an all purpose fowl. They have the color and markings of the Barred Rock, and a nice rose comb. Now, kindly let us have as full a history of the Dominiques, ancient and modern, as it is possible to obtain. Let us hear from the editor, and all contribute who can add to our knowledge of the variety. And I hope we may soon have an American Dominique Club. I would like to be a charter member of the same.

PLYMOUTH ROCKS.

WHITE PLYMOUTH ROCKS at Owen Farms include the entire flock of the late H. W. Graves. This strain has produced more winners for the leading shows than all other strains combined. The finest flock of this strain ever raised is now on our farms. Our Buff and Barred Rocks are equally good, and we offer you sure winners, and good breeding birds of all three varieties that will please you. Our illustrated catalogue is yours for the asking, and will tell you about our farms and our birds. Owen Farms, Box J, Vineyard Haven, Mass. 677-728

WHITE PLYMOUTH ROCKS. FISHEL'S are the best in the world, winning more prizes at World's Fair than any other two White Rock exhibitors. My new 48-page catalogue is the finest poultry catalogue ever issued. Send three 2-cent stamps for a copy. 5,000 birds to sell. Address U. R. Fishel, Box D, Hope, Ind. 643-694

EDDY'S BUFF ROCKS EXCLUSIVELY.—I have three hundred breeders mated for best results. Extra good layers. Eggs, special mating, three dollars per thirteen; regular $2 layers, $1. Discount on large orders. The Poplars, D. B. Eddy, Prop., Somerset, Mass. 643-694

CANADA'S BEST BARRED and BUFF Rocks.—I have mated some of the grandest specimens of these two varieties that can be found. Will give excellent value in eggs and stock. Fine illustrated catalogue on application. Eggs, $3.00 and $5.00 per setting. Stock for sale. J. R. Boyce, Box 412, London, Canada. 647-698

BARRED PLYMOUTH ROCKS. Bradley Bros. Strain pure. Over 500 birds for sale, old and young, with quality to win in any company. Catalogue with photographs of my winners and list of winnings free. Blue Barred Farm, F. H. Castner, Propr., Glen Gardner, N. J. R. F. D. 1.

BARRED ROCKS OF QUALITY—MY winnings at the leading shows a proof. A positive guarantee with every bird I sell. Your money back if not as represented. Mating Barred Rocks for results a specialty. W. A. Mason, Ashland, Ohio. 671-722

A LARGE NUMBER OF EXHIBITION males and females for sale. Also a few old breeders. Winners of State Championship at Cincinnati, Ohio. Satisfaction guaranteed every time. Eggs in season, $3.00 per 13. C. W. Rollins, vice-president American Buff Plymouth Rock Club, Ashland, Ohio. 671-722

BUFF PLYMOUTH ROCKS EXCLUsively. Fourteen years a breeder of this variety. Winners at the good shows all these years. Some excellent exhibition birds for sale, shape right, color right, birds scoring up to 93½ by Hewes and Pierce. Phil. Fiel, Canal Dover, Ohio. 675-691

FOR SALE.—Barred Plymouth Rock pullets and cockerels that will please you. Barred to the skin. I am closing out my Barred Rocks, Bradley Bros.' strain, and they are good ones. If not, you can have your money back. W. T. Foster, Woodstown, N. J. 677-679

BUFF PLYMOUTH ROCKS.—Fine shape, low combs, rich Buff. Winners Cincinna ti,Louisville, Danville, Frankfort, Lexington, Kentucky. Blue Grass Poultry Show, 1906, 1st hen, 1st and 2d cockered, 1st and 2d pullet, 1st and 2d pen, by T. E. Orr. Stock on approval. W. B. Buford, Vice-President, Nicholasville, Ky. 677-689

SHOW COCKERELS A SPECIALTY.—Won 2d and 3d at the great Brockton Fair just held. Have won at Boston, Springfield, Lenox, Stamford. No one has better; few as good. We are sure to please you. Thos. Briant, Lenox, Mass. 677-689

Darling's Protein Feeds

MAKE THE EGGS COME.

Cold weather is the time you make your egg money—**if you have the eggs.** It's a matter of summer rations in winter weather. Darling's high quality feeds—high in protein, low in fat—meet the demand. Don't forget that it's cheaper to pay 2 cents a pound for a food that's fresh and sweet and every bit egg making material, than to pay 1 cent for stale stuff of doubtful value, sold without guarantee.

Darling's Laying Food.....$2.00	Darling's Beef Scraps.....$2.50
Darling's Scratching Food.....$2.00	Darling's Chick Feed.....$2.50
Darling's Forcing Food.....$2.00	Darling's Oyster Shells..... .60

Darling's Mica Crystal Grit.....65c

In 100 pound Sacks. Shipped from Chicago or New York. Cash with order.

You need our late Food and Supply Catalog. Goods that it pays to buy. No foods but poultry foods. Catalog is free. Write for copy. Address nearest office.

WE WANT NAMES

We want YOU to send us the names and addresses of from ten to twenty-five persons living in the United States, each one having twenty-five hens or more. You can send us the names from any number of different postoffices. If you will send us these names we will send you TWO BEAUTIFUL COLORED PICTURES FREE. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten names.

We want to send a free sample copy of a special issue of the HOME MONTHLY (The National Poultry Journal), to a lot of poultry raisers who are not now taking our paper and for that reason we want these names.

Send us immediately a list of at least ten poultry raisers and we will mail you, postpaid, ABSOLUTELY FREE, TWO REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES, beautiful colors, size 15x20 inches. Address: THE HOME MONTHLY, 20 North William St., New York.

Let Me Hand You My Latest Book on Poultry Culture

ABSOLUTELY FREE

I want to send you a copy of this book **free.** It is a gold mine of practical information for the poultry-raiser. I call it **"An Easy Lesson in Poultry Culture,"** because the lessons it teaches are easy to learn and easy to apply. My object in publishing this book is to point out how dollars in place of cents can be made in producing poultry and eggs for market purposes. It is stated so plainly that the novice can follow the directions and make a success of the poultry business. I especially commend the chapter, **"The Back-Lotter"** to the city dweller who wants to **"try-out"** this business before going into it on a large scale. And then I have another book—a good companion for this one—**"Poultry Feeding for Profit"** that you should have also. It is full of feeding facts that I know, from actual experience, will be valuable to every chicken raiser. It gives feeding methods and information that will be helpful every day, for every fowl on your place—from the little chick "just out" to the old hen you are fattening for market. There is lots of money in the poultry business if you know how to handle chickens right. These two books will give you all the information you'll need—information you can put into practice. You cannot get this information anywhere else. Write today, **I will send both books free,** and also send my catalog on Model Incubators and Brooders the latest and most successful hatching and rearing machines on the market.

REGAL STRAIN WHITE WYANDOTTES

sweep the board at the New York State Fair, 1906. In competition with the winners at Madison Square, 1906, they win as follows:

1st and 3d Cock; 1st, 2d, 3d Cockerel; 1st Hen; 1st and 2d Pullet; 1st Breeding Pen (old); 1st Breeding Pen (young).

This is the only time in the history of the show that any exhibitor ever won 6 firsts in White Wyandottes, and my victory is all the greater owing to the fact that these winners are of my own breeding. A grand lot of stock for sale of the same breeding as the winners. Prices reasonable. Address:

POULTRY EXPERIMENTS

By G. M. GOWELL.

Bulletin of the Maine Agricultural Experiment Station, 1906—(Continued).

Ten nests are placed against the partition in each end of the room, in two tiers. They are of ordinary form, each nesting space being one foot wide, one foot high and 2 feet long, with the entrances near the partition, away from the light, and with hinged covers in front for the removal of the eggs. Each section of 5 nests can be taken out, without disturbing anything else, and cleaned and returned. In constructing the house it was designed to use these nests only for the present year. The framework where they rest was arranged for the use of trap nests, the intention now being to install them at the end of the present year, in October.

Troughs are used for feeding the mixtures of dry meals, shell, bone,grit and charcoal. The bottoms are made of boards 7 inches wide; the ends being of the same width and 18 inches high. The back is of boards and the cover is of the same material and slopes forward sufficiently so the boards cannot sag on it. A strip 5 inches wide is nailed along the front edge of the bottom to make the side of the trough. Pieces of lath are nailed upright on the front, 2 inches apart, between which the hens reach through for the feed. A thin strip 2 inches wide is fastened to the front of the trough at an angle of about 45 degrees to catch the fine meal that the birds pull out and would otherwise waste. They clear it up from this little catchall and so waste is mostly prevented.

Two lines of 4 by 4 inch spruce are arranged as an elevated track above the doors. The track extends the entire length of the building and being faced with narrow steel bands on top, a suspended car is readily pushed along, even when heavily loaded. The platform of the car is 2 by 8 feet in size and is elevated a foot above the floor. All food and water are carried through the building on this car. The 10 iron baskets, into which the roost platforms are cleaned every morning, are put on the car and collections made as the car passes through the pens to the far end of the building, 400 feet away, where the roost cleanings are dumped into the manure shed. As the car is pushed along, the guard at the front end comes in contact with the doors and pushes them open and they remain so until the car has passed through, when the spring hinges force them to close again. This car is a great labor saver, as it does away with nearly all lugging by the workmen. It has enabled one man to take good care of the 2,000 hens from November to March, except on Saturdays, when the litter has been removed and renewed by other men.

At one end of the building there is a temporary food and water house for dish washing and scalding and where the car remains when not being used.

There is a walk outside of the building extending along its entire front. It is 4 feet wide and is made of 2 inch plank; it is elevated 2 feet above the floor of the building, which allows the doors, through which the birds pass to the front yards, to be opened and closed without interference. The door which opens out of each room through the curtain section, is above the outside walk and necessitates stepping up or down when passing through, which is not a very serious objection, as the door is used but little in the daily work, but mostly in cleaning out and renewing the floor litter. A guard of wire poultry netting, a foot wide along the outside of the walk, prevents the birds from flying from the yards up to the walk. The advantages of the elevated walk, over one on a level with the sill of the building, is that it is unobstructed by gates, which would be necessary were the low walk used, to prevent the birds from passing from one yard to another.

The yards conform in width to the 20 foot sections of the house and are 100 feet deep. The fence is 5 feet high and is made from 2 strips of 2 inch mesh No. 19 poultry netting. By using 2 strips of 30 inch width, instead of one strip of double that width, 2 strong lines of wire are brought in the middle and the liability of bagging is much lessened, while the cost is not increased.

To give free passage for teams, to near the door of the building, openings 12 feet wide are left in the yard fences. They are 15 feet away from the front of the building, so that the road may not be obstructed by the snow which is liable to accumulate near the building. The frame fence sections, which fill in the openings during the summer, are quickly taken out and replaced on cleaning days, and the delivery of bedding and worn litter back and forth,

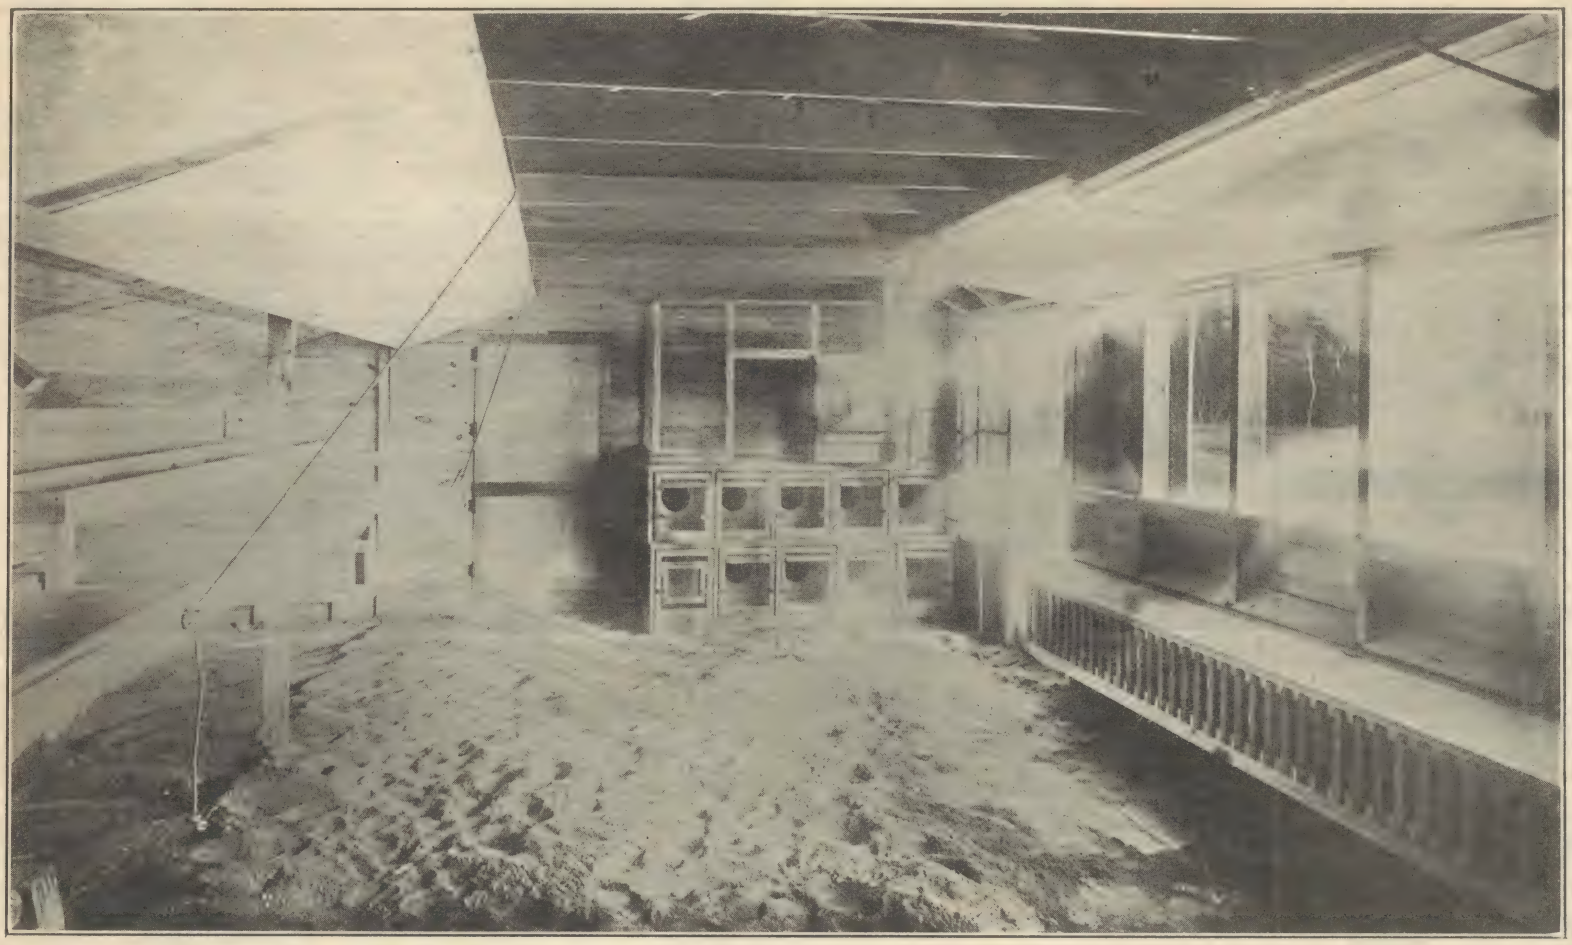

Figure 13. Interior of one section of curtain front house.

from wagon to buildings, is very directly made.

Yards, similar to those in front, will be constructed in the rear of the building and by alternating their use it is hoped to keep them clean, and more or less covered with green plants.

Packing and Shipping House.

A house 20 by 24 feet in size was made, in which to handle and pack the eggs for market. Its walls are packed with planer shavings, to prevent too great changes in temperature during extreme weather. It is well heated and lighted. The eggs are expressed to market when not more than one day old. The express company takes the shipments at the house daily and returns the emptys.

Residence of Foreman.

A neat four-room cottage house, finished and painted, was built for the foreman and his family. It has long distance telephone connections and in this way the foreman is within reach of the owner at all times.

Every building on the plant is new, having been constructed for the special purpose of poultry business. The equipment is also entirely new and uniform, only one kind and size of incubators, and one kind of indoor brooder being used, which relieves the operators of the annoyances which arise from the use of different kinds of machines.

Investigation Relating to Breeding to Increase Egg Production in Hens.

In 1898 the Maine Agricultural Experiment Station designed and constructed fifty trap nests and put them in use by the pullets kept that year. From time to time, the work has been extended until now 200 trap nests are in use by a thousand hens.

By the trap nest it is possible to know the exact daily work which every hen is doing. At the end of the year those that had laid 160 eggs, or over, were selected and saved for breeders. They were bred to males whose mothers had laid 200, or more, good eggs per year. No female has been used in the breeding pens, for six years, whose mother did not lay at least 160 eggs in her pullet year. The breeding pens are now filled with birds of both sexes, that have six generations of mothers and fathers before them, that were bred under these rigid rules of selection.

The stock commenced with in 1898 had been laying about 120 eggs each per year for several years, as shown by the flock records. During the last two years, the hens have averaged 144 eggs each, during their pullet year. There seems to be reason to conclude that the producing capacities of the hens have been increased by about 2 dozen eggs per year. Perhaps this increase is not all due to the selection and breeding. The dry feeding and open air housing, doubtless, have contributed to the improvement. But, reason about it as one may, the fact remains that not a drone or small producer, backed only by beauty of form, feature, or color, has had a place in the breeding of these birds in any of the last 6 generations.

The purpose of this work must not be misunderstood. The attempt is not to produce a stock of birds that shall average to produce 200 eggs per year. If by continued work a family of birds can be permanently established that with reasonable treatment, will yield 12 dozen eggs each per year in flocks of 100, it will be a matter of great consequence to the poultry industry. These yields are already being obtained in the Station flocks. There is no reason why the stock should not yield as well in other hands, but in order for succeeding generations of birds to do so, it will be necessary to at least use male birds whose breeding has been based on performance.

(To be continued.)

THE AUGUSTA SHOW.

The Augusta, Georgia, Poultry Show, held October 29 to November 3, in connection with the Georgia, Carolina State Fair, was the largest show ever held in our city, with about 1,500 birds and many of the finest quality; over one hundred White Wyandottes. Very large classes in White Leghorns, White and Barred Plymouth Rocks. Rhode Island Reds, Buff Rocks and the B. B. R. Game Bantams were quite large and very high class. Almost every variety recognized in the Standard was on exhibition, and made a beautiful sight to about 30,000 visitors. It was indeed the best part of the fair. The poultry industry is on a boom down here. We have secured many new members to our club.

Below are the awards:

BARRED P. ROCKS.—Cock 1, breeding pen 3 John J. Cohen, Augusta, Ga.; cock 2, cockerel 3, breeding pen 5 W. R. Munday, Augusta, Ga.; cock 3, cockerel 2, pullet 1-4, pen 2 John F. West, Graniteville, S. C.; cock 4, hen 2, pen 4 A. J. Braun, Syracuse, N. Y.; cockerels 1, hen 1, pullet 2, pen 1, display 1 Geo. J. Verdery, North Augusta, S. C.; hen 3-4 C. E. Reagan, Congers, Ga.

WHITE P. ROCKS.—Cock 1, hen 4, pen 3 Robt. Wingfield, Grovetown, Ga.; cock 2, cockerel 4, hen 3, pen 2 J. Willie Levy, Augusta, Ga.; cock 3, cockerel 2, pullet 1-2-3-4, pen 1, display 1 M. C. Jones, Augusta, Ga.; cock 4, hen 1, pen 4 W. A. Smith, Whitney Point, N. Y.; cockerel 1 Belvedere Farm, North Augusta, S. C.; cockerel 3, hen 2, pen 4 John J. Cohen, jr., Augusta, Ga.

COLORED DORKINGS—All to Braun.

RED CAPS—All to Smith.

BLACK ORPINGTONS—All to J. Willie Levy, Augusta, Ga.

BUFF ORPINGTONS—Cock 1 Belvedere Poultry Farm; cock 2, cockerel 1 hen 1-2-3-4, pullet 1-3-4, pen 1-2 W. H. Puryear, Glendale, Tenn.; cockerel 2, hen 5, pullet 3 W. A. Smith.

WHITE ORPINGTONS—All to W. A Smith.

W. C. BLACK POLISH—All to A. J. Braun.

BEARDED GOLDEN POLISH—All to Braun.

WHITE BEARDED POLISH—All to Braun.

SILVER AND GOLDEN SPANGLED HAMBURGS—All to Smith and Braun.

ALL OTHER HAMBURGS—To Smith and Braun.

HOUDANS, CREVE COEURS, LA FLECHE—All to Smith and Braun.

S. C. RHODE ISLAND REDS—Cock 1-2-3, cockerel 4, hen 1-2-3-4, pen 2 Dr. H. J. Godin, Augusta, Ga.; cockerel 1, pullet 1-2-3-4, pen 1 Mrs. L. Simmons, Cave Springs, Ga.; cockerel 2-3, pen 3 A. J. Salinas, Augusta, Ga.

R. C. RHODE ISLAND REDS—All to F. J. Storey, North Augusta, S. C.

RHODE ISLAND WHITES—All to Chas. N. Spinks, Greenville, S. C.

B. B. R. GAMES—All to Braun and Smith.

BROWN R. GAMES—All to Braun.

PIT GAMES—All to Dr. J. T. Whitton, North Augusta, S. C.

ALL OTHER GAMES to Braun and Smith.

B. B. R. GAME BANTAMS—Cock 1-2-5, cockerel 1-2, hen 1-3, pullet 1-2-5, pen 1, display 1 Dr. W. C. Cleckley, Augusta, Ga.; cock 3, pullet 4, cockerel 3, hen 2, pen 2 W. A. Smith; cock 4 A. J. Braun; cockerel 4-5, hen 5, pullet 4, pen 3 Dr. R. L. Olive, Augusta, Ga.; hen 4 Belvedere Poultry Farm, Augusta, Ga.

BROWN RED BANTAMS—All to Braun.

GOLDEN DUCKWINGS—All to Braun.

SILVER DUCKWING G. BANTAMS—Cock 1, hen 1 W. A. Smith; cock 2, hen 2 A. J. Braun; cock 3-4, hen 2-4, pen 1 Belvedere P. Farm.

RED PYLE G. BANTAMS—Cock 1-2, cockerel 1-5, hen 1-2, pullet 2 A. J. Braun; cockerel 2-4, pullet 1 W. A. Smith; cockerel 5, hen 3-4-5, pen 2 Dr. R. L. Olive, Augusta, Ga.

WHITE GAME BANTAMS—All to Smith and Braun.

CORNISH INDIAN GAMES—Cock 1 Belvedere Poultry Farm; cockerel 1, pullet 2-3 Dr. T. M. Sherlock, Charleston, S. C.; cock 2, pullet 1 W. A. Smith.

WHITE INDIAN GAMES—All to A. J. Braun.

BLACK SUMATRA GAMES—All to Braun and Smith.

BLACK R. MALAY GAMES—All to Braun and Smith.

GOLDEN SEBRIGHT BANTAMS—Cock 1-3-4, cockerel 1-2, hen 2-5, pullet 1-3, pen 1 W. A. Smith; cock 2-5, cockerel 3, hen 1-3-4, pullet 2, pen 2 A. J. Roesel, Augusta, Ga.

SILVER SEBRIGHT BANTAMS—All to Smith.

ROSE COMB WHITE AND ROSE COMB BLACK—All to W. A. Smith.

LIGHT AND DARK BRAHMA BANTAMS—All to W. A. Smith and A. J. Braun.

BUFF COCHIN BANTAMS—Cock 1-3, cockerel 1, hen 1-2-3, pullet 3, pen 3 W. A. 2, H. H. Verdery, Augusta, Ga.
Smith; cock 2, cockerel 2-3, pullet 1-2, pen

PARTRIDGE, WHITE, BLACK COCHIN BANTAMS—All to Braun and Smith.

BLACK TAIL WHITE AND BLACK JAPANESE BANTAMS—All to W. A. Smith and A. J. Braun.

BEARDED AND NON-BEARDED POLISH BANTAMS—All to W. A. Smith.

WHITE AND BLACK BOOTED BANTAMS—All to Braun and Smith.

SILKIES AND SULTANS—All to Smith and Braun.

PEARL, WHITE, LAVENDER AND PIN TATOO GUINEAS—All to Smith and Braun.

PEKIN DUCKS—1-3 pairs to W. A. Smith; 2d pair to J. W. Reynolds, Augusta, Ga.

ALL OTHER VARIETIES to Smith and Braun.

ALL VARIETIES OF GEESE to Smith and Braun.

PHEASANTS, all to Smith and Braun.

PIGEONS—1st display A. J. Braun, 2 W. A. Smith, 3 Belvedere Farm, 4 E. Clausen.

BEST ON THE LIST.

Enclosed find one dollar for the American Fancier, as it is the best poultry paper on my list and would rather do without all the rest than the American Fancier. W. D. CAMPBELL.
Bloomfield, N. J., Nov. 27, 1906.

CHARLESTON, S. C.

November 5 to 10.

"The Banner Show of the South", at Charleston, held November 5 to 10, well-earned its title. It was first-class in every respect and down to date to the minute. Before the judges got through with a class they were followed in the aisles with the prize ribbons in place on the coops. On the backs of the ribbons was a fixed card on which was specified the class, winner and owner's name and address, and thereby making the ribbons an identified official record. The society also furnished free to each exhibitor cards with prominent type, "Owned by", followed with name and address. One of these cards was placed on each coop of all the exhibitors' entries. The management's promptness and systematic business methods were equal to any Madison Square show, consequently further praise in this direction is unnecessary, but the writer feels like making public recognition of the efficiency and courtesy of the officials of this great Charleston show.

The quality of the birds was a pleasant surprise and proves the South is breeding birds equal in all respects to those raised in any section of our country. White Wyandottes were a magnificent class, fine specimens of the true type, neat and natty, pure white, good size, were very numer and after the awards, five prizes w placed, there was quality still left to do the same thing over. It was the same in White Rocks. A class of 42 White Rock pullets, with "quality to burn", was no easy brain problem to solve in selecting the winners. The White Rock hen winning the special for whitest bird in the show was a choice type bird, unusually white, correct eyes, etc.

Not a single kick was made on the judging, and there couldn't be on the management, so everyone, with the judges included, was pleased. Being held "gala week" added greatly to the pleasure of the fancier and augmented the attendance. The writer had the honor of judging the first and last Charleston poultry shows, and could therefore appreciate the contrasts.

Among those seen at the last show was Dr. McInnes, one of the officials of the show, who was also an official at the first show, and W. P. Coulson, who was an exhibitor at the first and last show. G. O. B.

Below are the awards:

BARRED ROCKS—Cock: Muse & Howard 1, Jeffrey 2, Heins 3; cockerel: M & Howard 1, W. F. Smith 2, Davis hen: Muse & Howard 1-3-4, Davis 2; pullet: Jeffrey 1, Muse & Howard 2-4, Davis 3; pen: Muse & Howard 1, Colson 2-3.

BUFF ROCK—Cock: McInnes 1, Pringle 2, Jeffrey 3, Livingston 4; cockerel: Jeffrey 1, Pringle 2-3; hen: Jeffrey 1-2, Livingston 3, McInnes 4; pullet: Jeffrey 1-2-3, Livingston 4.

WHITE ROCK—Cock: Snelson 1-4, Cross & McDowell 2, Hunter 3; cockerel: Mann 1, Snelson 2-4, Hunter 3; hen: The Connelley Company 1, Snelson 2, Hardman 3, Mann 4; pullet, Cross & McDowell 1, James Robertson 2-3, Snelson 4; pen: Gaines 1, Snelson 2-3, Connelley Company 4.

WHITE WYANDOTTES—Cock: A. W. Smith 1, Jeffrey 2, McDowell & Bissell 3, Guess 4; cockerel: A.W. Smith 1-3-4, Humphries 2; hen: Bollinger 1, McDowell & Bissell 2, Humphries 3-4; pullet: Johnson 1, Jeffrey 2-3, Guess 4; pen: McDowell & Bissell 1-2, Guess 3, Smith 4.

BUFF WYANDOTTES—Cock: P. A. Robertson 1, Scharlock 2; cockerel: P. A. Robertson 1-2; hen: Robertson 1-2-3-4; pullet, Robertson 1-2.

SILVER WYANDOTTES—All awards to Holzhauser. No competition.

PARTRIDGE WYANDOTTES — Cock: Parker & Miller 1; cockerel: Sandy Run Poultry Yards 1-2-3; hen: Sandy Run Poultry Yards 1-3-4, Parker & Mille pullet: Parker & Miller 1, Sandy Poultry Yards 2-3-4.

BUFF ORPINGTON—Cock: Muse 1-2-3, Belvedere Poultry Farm 4; cockerel: Muse & Howard 1-2-3, McFall 4; hen, Muse & Howard 1-2-3, Hardman 4; pullet, Muse & Howard 1-3-4, McFall 2; pen: Muse & Howard 1-2.

WHITE ORPINGTONS—All awards to Muse & Howard. No competition.

S. C. WHITE LEGHORNS—Cock: Wilber Brothers 1, Scharlock 2, Mann 3, Parker & Miller 4; cockerel: Herbert Wilbur 1-3, Parker & Miller 2, Scharlock 4; hen:

Wilber Brothers 1-2, H. Wilber 3, Parker & Miller 4; pullet, Scharlock 1-3, Wilber Brothers 2, H. Wilber 4; pen: H. Wilber 1, Mann 2, Scharlock 3-4.

S. C. BROWN LEGHORNS—Cock: Jeffrey 1, Parker & Miller 2; cockerel: Greene 1-3, Parker & Miller 2; hen, Greene 1-2, Parker & Miller 3; pullet, Greene 1-2-3-4.

BUFF LEGHORN—Cock: Wilson 1, Parker & Miller 2, Steele 3; cockerel: Guess 1; hen, Guess 1-2, Wilson 3-4; pullet: Wilson 1-2, Guess 3-4; pen: Wilson 1.

R. C. WHITE LEGHORN—All awards to Scharlock. No competition.

R. C. BROWN LEGHORN—All awards to London. No competition.

BLACK MINORCAS—Cock: Cook 1; cockerel, Cuthbert 1-3, Sandy Run Poultry Yards 2-4; hen, Sandy Run Poultry Yards 1, Cook 2, Connelley Company 3; pullet: Sandy Run Poultry Yards 1-4, Cuthbert 2-3; pen: Connelley Company 1.

S. C. R. I. REDS—Cock: Terrill 1, Langford 2; cockerel: Langford 1, Terrill Maple Poultry Yards 3; hen: Terrill 1, Langford 2; pullet: Terrill 1-2, Pouncey 3, Langford 4.

R. C. R. I. REDS—Cock: Watson 1; cockerel: Brooks 1, Hardman 2-4, Watson 3; hen: Watson 1-2-3, Hardman 4; pullet: Hardman 1-3, Brooks 2-4.

BUCKEYES—All awards to Watson. No competition.

SILKIES—All awards to Galusha. No competition.

ANCONAS—All awards to Parker and Miller. No competition.

LIGHT BRAHMAS—Cock: Parker and Miller 1-3, Watson and Duncan 2; cockerel: Parker and Miller 1, Jeffrey 2-3; hen, Sandy Run Poultry Yards 1-3, Watson and Duncan 2, Parker and Miller 4; pullet: Jeffrey 1-2, Parker and Miller 3.

DARK BRAHMAS—All awards to Shull. No competition.

BLACK LANGSHAN—All awards to Scharlock. No competition.

WHITE LANGSHAN—All awards to [illegible]. No competition.

BUFF COCHINS—Cock: Withington 1, Mrs. Mitchem 3, Deery 4; hen: Mrs. Mitchem 1-2, Deery 3-4; pullet: Galusha 1; pen: Withington 1.

RED CAPS—Cock: London 1, Parker & Miller 2-3; cockerel: Parker & Miller 1-3, London 2; pullet: Parker & Miller 1-2, London 3.

WHITE CRESTED BLACK POLISH—All awards to Galusha. No competition.

HOUDANS—All awards to Schultze. No competition.

SILVER SPANGLED HAMBURGS—Cock: Parker & Miller 1-2, London 3; cockerel: Parker & Miller 1-2, Maple Poultry Yards 3; hen: London 1, Parker & Miller 2-3; pullet: London 1, Parker & Miller 2-3; Maple Poultry Yards 4.

SUMATRAS—Cock: Jeffrey 1, Robbins 2; hen: Robbins 1; pullet: Jeffrey 1-2, Robbins 3.

CORNISH INDIAN GAME — Cock: Scharlock 1, Hyer 2; cockerel: Scharlock 1-3, Hyer 2; hen: Hyer 1-2, Scharlock 3; pullet: Scharlock 1-3, Hyer 2; pen; Scharlock 1.

WHITE INDIAN GAME—Cockerel: W. L. Hyer 1, N. A. Hyer 2; pullet: W. L. Hyer 1, N. A. Hyer 2.

BUFF COCHIN BANTAMS—Cock: Galusha 1-4, Jeffrey 2-3; cockerel: Jeffrey 1, Galusha 2; hen: Jeffrey 1-2-3, Galusha 4; pullet: Jeffrey 1-2-3, Galusha 4.

BLACK COCHIN BANTAMS—Cock: Jeffrey 1; cockerel: Sandy Run Poultry Yards 1-3, Parker & Miller 2-4; hen, London 1, Sandy Run Poultry Yards 2-4, Parker & Miller 3; pullet: Jeffrey 1, Sandy Run Poultry Yards 2-3-4.

GOLDEN SEBRIGHT BANTAMS — Cock: Mathias 1-3, Scharlock 2-4; cockerel: Scharlock 1, McCarty 2-3, Mathias 4; hen: Mathias 1-2-3, Scharlock 4; pullet: Mathias 1-2, Scharlock 3, McCarty 4; pen: Scharlock 1.

B. B. RED GAME BANTAMS—Cock: Cleckley 1-2-4, Olive 3; cockerel: Cleckley 1-3-4, L. W. Smith 2; hen: Cleckley 1-2-4, Belvedere Poultry Farm 3; pullet: L. W. Smith 1, Cleckley 2-3-4; pen: Cleckley 1.

TURKEYS—Tom: Heins 1, Pringle 2; hen: Heins 1-2, Pringle 3.

BELGIAN HARES — All awards to Moore. No competition.

PIGEONS — White Jacobins, yellow Jacobins, almond Turbit, black Pouter, black Owl, red Magpie and white Fantail, all awards to Wm. H. Collins. No competition.

SPECIAL PRIZES.

Award of silver loving cup specials were as follows:

For best white fowl in the show washed with Ivory soap, $25 cup. Won by The J. M. Connelley Company on white Plymouth Rock hen.

Silver loving cup for best display barred Plymouth in the show. Won by Muse & Howard, Decatur, Ga.

Silver loving cup for best display of White Plymouth Rock in the show. Won by the Palace Poultry Yards.

Silver loving cup for the best display of Buff Plymouth Rocks in the show. Won by J. N. Jeffrey, Raleigh, N. C.

Silver loving cup for the best display of white Wyandottes in the show. Won by McDowell & Bissell.

Silver loving cup for the best display of buff Wyandottes in the show. Won by P. A. Robertson.

Silver loving cup for the best display of buff Orpington in the show. Won by Muse & Howard, Decatur, Ga.

Silver loving cup for the best display of white Leghorns in the show. Won by H. Wilbur.

Silver loving cup for the best display of brown Leghorns in the show. Won by Jno. P. Greene, Charlotte, N. C.

Loving cup for the best display of buff Leghorns in the show. Won by E. L. Wilbur, Columbia, Tenn.

Silver loving cup for the best display of black Minorcas in the show. Won by R. B. Cuthbert.

Silver loving cup for the best display of Cornish Indian games in the show. Won by Dr. T. M. Scharlock.

Silver loving cup for the best display of B. B. red game bantams in the show. Won by Dr. W. C. Cleckley, Augusta, Ga.

Silver loving cup for best display of Cochin bantams in the show. Won by Jeffrey Bros.

Silver loving cup for the best display of Sebright bantams in the show. Won by Dr. T. M. Scharlock.

NEW YORK STATE DEPARTMENT OF AGRICULTURE.

Special Poultry Institute, in connection with the meeting of the American Poultry Association at Auburn, N. Y., on January 8-9, 1907.

F. E. Dawley, Fayetteville, N. Y., director of institutes; T. E. Orr, Beaver, Pa., sec'y American Poultry Association: J. H. Scott, Auburn, N. Y., local correspondent.

Program.

Tuesday, 10:00 A. M.

Address of welcome.....
.....The Mayor of Auburn

Response to address of welcome....
Grant M. Curtis, Buffalo, N. Y., Pres. American Poultry Ass'n.

Practical Poultry Management.....
G. M. Gowell, Orono, Me., Prof. of Poultry Husbandry, University of Me.

Tuesday, 2:00 P. M.

Poultry at the Farmers' Institutes..
T. E. Orr, Beaver, Pa., Sec'y American Poultry Ass'n.

What New York State is doing for Poultry Culture .....
...T. F. McGrew, Washington, D. C.

Tuesday, 7:30 P. M.

Results of recent investigations in Poultry Husbandry in the United States.....C. K. Graham, Storrs, Conn., Asst. Prof. Poultry, Culture, Conn. Agricultural College.

Education and Experimentation in Poultry Husbandry in the United States.....James E. Rice, Ithaca, N. Y., Prof. of Poultry Husbandry, Cornell University.
(Illustrated with lantern slides.)

Wednesday, 11:00 A. M.

School of judging.
Judges in attendance at the meeting of the American Poultry Association will appear before the institute and with the birds which have been judged will explain their methods.

Wednesday, 11:00 A. M.

Question box and "Experience" meeting.

Wednesday, 2:00 P. M.

The Ups and Downs of the Poultry Show.....Fred L. Kimmey, Chicago, Ill., Sec'y National Fanciers' and Breeders' Ass'n.

The Judge and Poultry Show.....
.Theodore Hewes, Indianapolis, Ind.

AMERICAN PLYMOUTH ROCK CLUB.

The American Plymouth Rock Club will meet at Chicago, Ill., Jan. 23d to 30th, 1907. Over $225.00 will be given as cash specials and a large and fine exhibit is expected. All to join the club before the first day of the show will be entitled to compete for the club specials.

The club will hold its annual meeting in the officers' quarters Saturday, January. 25th, at 2 p. m. All are cordially invited to attend.

M. S. GARDNER, President, Auburn, N. Y.

H. P. SCHWAB, Secretary, Irondequoit, N. Y.

DR. O. P. BENNETT, Washington, Ill., State Secretary.

THE BEST THING HE HAS READ.

Editorial remarks on judging are the best thing I have read yet on judging. Hit out again. E. E. BOYCE.
Clifton Park, N. Y., Sept. 6, 1906,

BUFF LEGHORNS NI THE SOUTH.

By T. T. Gardner, Louisville, Ky.

About three years ago I started to breed S. C. Buff Leghorns by buying a cheap pen from a local breeder, and I thought I had the prettiest lot I ever saw. I used them as breeders that year and did not raise a good chicken from them; they all had black or white in wings or tail.

I made a mistake that many others often do by not starting with extra good stock at the beginning. It costs a little more at first, but you will soon get it back with good stock; but when you buy cheap stock you never gain much. The next year I got rid of that pen and purchased a pen of extra fine breeders and went into the show room and beat the man I bought the first pen from all to pieces, and have been doing it ever since.

I think the Buff Leghorns are the best general purpose fowl in existence to-day, as they are very hardy, quick growers, and when grown are the greatest layers on earth. My pullets begin laying from four and a half to six months old, and keep steadily at it all through the winter. They moult early in the fall and are ready to lay again by the last of October, which makes them very profitable to me during the winter. If the little chickens' wings are clipped about every two weeks until they are about six weeks old they will grow very fast and make fine broiler chickens, as by clipping the wings it stops the feather growth and strengthens the body more.

I put out two broods last year at the same time; one was Barred Plymouth Rocks and the other Buff Leghorns. I kept the Leghorns' wings cut and at six weeks the Leghorns were a trifle larger than the Rocks. I have tried the Leghorns with a number of other breeds at the same time, and they always do better for me than any of the others.

I am breeding Buff Wyandottes now with the Leghorns, and if I had to give up one I would keep the Leghorns, as I believe there is more money in a good strain of Buff Leghorns than any other breed in the Standard. This year I expect to raise several hundred birds, mostly Leghorns. Some claim that to get eggs in winter from Leghorns you have to have a very warm house. Our winters here in Kentucky are very severe, and I have got eggs every day during winter when it was cold enough in the house to freeze the water solid in the fountains. I would open up the windows every day for four or five hours, and let them have plenty of fresh air, and I did not have a frosted comb in the lot.

If one wants to start in the poultry business, and wants to get a breed of fowls that will stay with them always, they will make no mistake in starting with Buff Leghorns, providing they get good stock or eggs from some reliable breeder, and then join the Buff Leghorn Club, they will be on he right road to success.

I hope that every breeder of Buff Leghorns will join our club and help to make the Buffs the greatest fowl in the world, as they are gradually coming to the front and in a little time will be known as the greatest, prettiest, and most profitable fowl in the world.

DORKING BREEDERS.

Henry Hales, Ridgewood, N. J.
Watson Westfall, Sayre, Penn.
Miss L. Goodell, Canastota, N. Y.
Basil D. Miller, Peterboro, N. Y.

J. B. N. Finch, Sec'y, Mount Vernon, N. Y.

It is with sorrow and regret that we learn of the death of Fred W. Hughson at his home in the village of Big Flats, New York, on November 13. Mr. Hughson was proprietor of the Mundy Farms and known throughout the Empire State as one of the largest and most successful breeders and exhibitors of poultry at the fall and winter shows. Personally, he was very popular, no better hearted or more gentlemanly fancier than he could be found. He will be greatly missed.

* * *

Mr. George B. Inches writes: "The display of White, Silver Grey and Colored Dorkings at the coming Boston Show will undoubtedly be the finest ever seen in this country." And why shouldn't it be? With such thoroughbred fanciers as Mr. Inches, the veteran Henry Hales, Messrs. Cope Jacobus, Officer Miller, Miss L. Goodell and others to keep up the interest in England's great and popular fowl, the Dorking in America is in good hands. But it deserves a far greater popularity than it enjoys at present. Its splendid intrinsic merits are temporarily lost sight of in this age of, and we might add, craze for, new varieties of fowl.

* * *

The Westchester County Poultry and Pet Stock Association at a recent meeting elected Mr. Jas. B. N. Fitch, secretary in place of Fred Harries, resigned; and Frank W. Gaylor, superintendent of poultry, with Mr. H. R. Foshay as his assistant in the pigeon department. This makes a very strong aggregation of talent. "Jim" Fitch is an old bird at the business, while "Frankie" Gaylor is no spring chicken, and has handled shows in years gone by, when some of our present stars in poultrydom were being fed with a spoon. Mr. Foshay is prominent in pigeon circles and is just the man to complete the Westchester triumvirate. That White Plains Show is going to be a "big go."

* * *

Look out for the Quality Poultry Show of Scranton, Pa. The premium list is out and it is one of the finest ever gotten out by a poultry association. The Sterling Silver Challenge Cups are a feature and must be won three times by one exhibitor before ownership can be claimed. If preferred by owner, value of cup won will be paid in cash. To realize this liberal offer one glance at the premium list will convince the reader that Scranton is the limit in this respect. Here we find Sterling Silver Challenge Cups ranging in value from $150 to $25 each, five being valued at $100, two at $50 and one at $25. There are in addition numerous other Silver Cups besides the greatest list of cash prizes ranging from 50 dollars for best displays and 25 dollars for second best displays in certain varieties, to five and ten dollar cash specials on individual birds in nearly all varieties. The entry fees are 75 cents for each specimen in competition and $2.00 for pens. The prizes in the open class are: First, $2.00; second, $1.00. This show will be penned and the feeding entrusted to Spratt's Patent. Mr. A. L. Sparks will be the superintendent and that means comfort for birds and courtesy to exhibitors. It is a pleasure to write of this show. We were present at the first one held last year and found the most up-to-date and hustling management that could be found in the United States. The show proved a big hit and the coming one will break all records, unless all signs fail. The judges are H. S. Ball, P. A. Cook, W. C. Denny and W. J. Stanton. The dates of the show are January 14 to 19. Entries close January 4. Send to A. W. Close, secretary, Scranton, Pa., for a premium list.

* * *

Mr. H. W. Billard of Brooklyn Hills, L. J., is a Black Minorca fancier of the most intense stripe and for years has kept some of the choicest specimens in his yards "just for the love of it." Billard's advertising card is a piece of effective as well as attractive work, being a clever bit of photo-engraving representing the jovial and rotund owner astride a famous Black Minorca cockerel, a bird with most perfect head and comb points; in fact the grandest bird ever raised by this sterling fancier. It was the bird that died the day before the Madison Square Garden Show of 1906 when it was entered and expected to have a royal chance for the blue ribbon. Mr. Billard believes the bird was poisoned, as it was in perfect health twenty-four hours prior to the opening of the show. It is now a fact that our Brooklyn friend will add a few choice Silver Wyandottes to his chicken ranch. When at the office of the American Fancier recently he remarked: "Guess I'll have to breed the Silvers. They are beautiful and rather hard to get top notchers. That's why it's worth a fancier's time to try and produce something that will please him and the rest of the Wyandotte cranks." The addition of H. W. Billard to the ranks of Eastern Silver Wyandotte breeders will act as a live wire in stirring the latter up and creating more enthusiasm in the ranks. A Silver Wyandotte Club may now be looked for,provided the clans will meet in sufficient numbers at the New York show in January.

The American birds sent to the Crystal Palace Show, England, which arrived home on the steamship Mesaba of the Atlantic Transport Line, Thanksgiving day, were none the worse for the trip; on the contrary, most of them looked far better on their return than when they departed a month before. They were splendidly cared for by the officers in charge of the vessels that carried them over and back. On the same steamer a consignment of Black Orpingtons arrived for Sunswick Poultry Farm, Plainfield, New Jersey. The cockerel and pullet in this bunch was taken out by Manager May on the dock for our benefit, and we are free to confess, we have never seen a larger or finer pair of Black Orpingtons. If they hold their own until January, they are bound to make trouble in Orpington alley at New York. These birds came from the yards of William Cook. A coop of Silver Grey Dorkings came over on the same steamer and the "Mesaba" might be called, "A Poultry Show Afloat."

* * *

The following judges have been selected to place the ribbons at the Boston show:

Poultry—W. B. Atherton, Boston, Polish and Polish Bantams; W. F. Brace, Victor, N. Y., Leghorns; J. Brett, Westwood, N. J., Ducks, Geese, Turkeys, Pheasants; F. H. Bryant, Hyde Park, Pit Games; H. H. Bumford, Waltham, Mass., Brahmas, Brahma Bantams; Sharp Butterfield, Windsor, Canada, Cochins, Dorkings, Ornamental Bantams; N. Cosh, Dover, Canada, R. C. Minorcas, Andalusians, Spanish; J. T. Cothran, New Rochelle, N. Y., Hamburgs; M. F. Delano, Vineyard Haven, Mass., Buff Wyandottes; J. H. Drevenstedt, New York, Golden, Silver and Black Wyandottes, Houdans and French varieties; Dr. W. Y. Fox, Taunton, Cochin Bantams; E. H. George, Groveland, Mass., White Plymouth Rocks; Ross C. H. Hallock, St. Louis, Mo., White Wyandottes; G. H. Northup, Raceville, N. Y., Single Comb Minorcas; R. Oke, London, Canada, Langshans and Orpingtons; A. F. Pierce, Winchester, N. H., Games and Game Bantams; F. W. Rogers, Brockton, Partridge and Silver Pencilled Plymouth Rocks, Partridge Wyandottes; Halstead Scudder, Glen Head, N. Y., Barred Plymouth Rocks; Lester Tompkins, Concord, Mass., R. I. Reds; Chas. Wheeler, Brighton, Mass., Silver Pencilled and Columbian Wyandottes Philander Williams, Taunton, Mass., Buff Plymouth Rock judge to be named later. Dressed Poultry, Frank M. Pollard, Attleboro, Mass.; Eggs, Geo. V. Fletcher Belmont, Mass.; Cage Birds, J. T. Graham, Medford, Mass.; Cats, T. Farrer Rackham, East Orange, N. J.

This is a formidable list and about as representative a one as can be gotten up in the Eastern States and Canada. The idea of announcing the classes each judge is assigned to is an excellent one and in line with the progressive management of the Boston Show. Secretary Samuel Roberts deserves great credit for his share in the making of the above. It is no easy matter for a secretary to select judges at a show, especially at a big one like the Hub function is bound to be. It takes firmness as well as diplomacy to make up the roster, as the pressure from selfishly inclined exhibitors is great when directed against one or more judges whom they do not fancy and wish replaced by one of their own kind. The Boston Show management selects judges according to its own ideas, and is not to be dictated to in such matters.

* * *

No doubt there will be some surprises on this list of Boston judges, notably P. H. Scudder, who will take the Barred Plymouth Rocks. This is an excellent choice and we are glad to learn that Mr. Scudder has recovered from a serious illness and will be in form again to handle his favorites. Mr. Scudder's work at the New York Show Rock Alley for many years is well and favorably remembered. Newton Cosh is new as a judge, but old in experience as a breeder and he certainly ought to make good, especially in the classes assigned to him. Mr. F. W. Rogers will have a hard job in handling the Partridge Wyandottes, but he is equal to the task, having bred and handled this variety a number of years most successfully. Mr. George ought to be at home with the White Rocks, having bred and exhibited them at Boston many years. The rest of the judges are well known and have handled the classes assigned to them before at this and other shows.

* * *

L. M. D., a subscriber in Pennsylvania, writes: "Kindly answer in the columns of the American Fancier how to distinguish a White Java from a White Plymouth Rock, and how can a White Indian Game be distinguished from a White Aseel?"

Pure White Javas are the same in shape as the Blacks, are longer in back and higher in station than Plymouth Rocks and should have dark brown eyes and dark willow legs instead of reddish bay eyes and yellow legs. The average White Java shown at county fairs is nothing more than White Plymouth Rock with pale willowish legs shading to yellow. They are good only for the pot. Aseels are somewhat smaller, but blockier in type and body than Indian Games. The body in hand is very firm, hard, heavy and evenly balanced, the general carriage straight and upright, angular throughout, and not too gamey in general appearance. The plumage is hard, close and wiry, and devoid of fluff. The Aseel represents the extreme in fowldom when it comes to great muscular development combined with low stature.

* * *

After reading the gush and goo that has emanated from many pens on the subject of licensing poultry judges, we still hold to the fact—fact, mind you—that the license of public opinion is the only real one. It has licensed the best judges now in the field and will

care for the on-comers as fast as they are worth.—Poultry Topics.

* * *

Editor Burhaus is correct. Hack drivers, venders and dogs are licensed in the United States for protective municipal reasons in which revenue [illegible] the star part. Poultry judges, or in fact, judges of any kind, are not supposed to be taxable commodities or personages, and would rather receive that revenue than be asked to pay it. This whole license clause in the proposed constitution and by-laws of the American Poultry Association might just as well be omitted. Let the American Poultry Association publish a list of all the poultry judges in the United States as a matter of reference and convenience for show secretaries. Put every honorable name on the list, whether the owner of same is a member of the society or not. If some judge is found to be dishonest or incompetent after a thorough investigation, his name can be dropped from the list. The fact is, exhibitors at leading shows know pretty well what they want in the judging line, and they do not care a red cent whether the judge they select belongs to the A. P. A. or not. The American Poultry Association can formulate rules to govern shows, but it cannot govern the shows.

* * *

It cost about nine hundred dollars for that committee of fourteen to meet at Mt. Clemans and spend over a week formulating those new articles of the Constitution and By-Laws. We wonder how long it will take to revise, discuss, debate, reconsider and argue over these at the Auburn meeting. It will be a long session no doubt, especially when we think of the canned speeches that some of our orators must deliver themselves of. It will require a "Tom Reed" in the chair to expedite matters by confining speakers strictly to the business before the meeting. Meetings in the past have frequently dragged along, due to unnecessary debate on the part of some members, whose ideas of time are limited, but whose ideas of their own importance in the poultry world are unlimited. Many members who attend American Poultry association meetings cannot afford to spend days where each day is an expense that must come from their own pockets. To members who are on committees and have their expenses paid by the society, as the paid officials, the time limit may be of no particular object, but they should in fairness to their less fortunate associates, do all in their power to keep business moving. Short and busy sessions are what are needed. The fact that some of the members left the committee of fourteen before the meeting of the latter closed, throws the work in hand on the remaining few, just as it has occurred at other meetings of the A. P. A. in past years. Important matters should come before a full house, so to speak, and not delayed until many of the rank and file are homeward bound. Take the Rochester meeting two years ago. It started with a rush, but after a goodly number had voted and listened to a day's discussion on the Standard, the attendance dwindled down to a ridiculously small number for a meeting of such grave importance. To pass measures, radical or conservative, with such a slim attendance, would raise the old cry of "ring," so common in the eighties and early nineties. The American Poultry Association is tackling a pretty big problem in this revised Constitution and By-Law business and the poultry breeders at large are watching the moves and awaiting the results with more than passing interest.

* * *

Mr. A. L. Sparks informs us that he was in no way responsible for the mistake made in the premium list of the New York Show regarding the awarding of the Ivory Soap Special Silver Cup. In fact, he is greatly annoyed that the printers should have made such a grievous blunder, as printed forms are given them so that no possible errors may occur. Furthermore, our friend Deacon Sparks takes umbrage at our remarks that he was the author of such "a stunt," in fact, he looks upon it as a very serious matter. We regret that the spirit of the occasion that offered the humorous side to the writer of these notes should in any way have annoyed or misrepresented Mr. Sparks. He is too earnest a fancier and too conscientious a business man to be guilty of flippant foolery in such important matters as the Ivory Cup Specials. We think, however, the Deacon took our remarks too seriously.

* * *

Mrs. Harvey H. Miller, Canton, Ohio, whose specialty is Barred Plymouth Rocks, made a remarkable record at the Erie, Pa., show held last week. In very strong classes Mrs. Miller succeeded in capturing five firsts, three seconds and two thirds. It takes high grade birds to win at a show like Erie and evidently Canton, Ohio, is the place and spot where these blue barred beauties grow to such a high state of perfection.

* * *

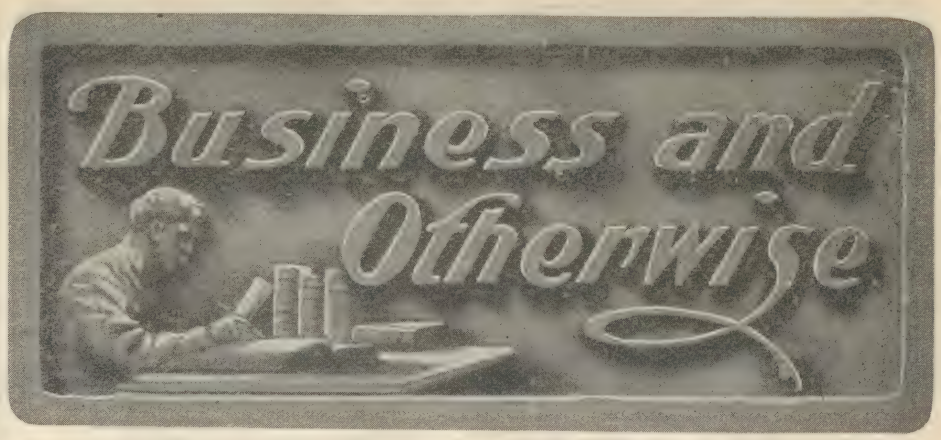
Mr. W. E. Samson, the veteran fancier and breeder of Silver Wyandottes, has bought a small but fine farm at Kirkwood, New York, about nine miles from Binghamton and will take possession of same March 1st, 1907. It will be devoted exclusively to breeding of Silver Wyandottes of the famous Samson strain. We look to this new poultry farm to show not only practical results, but to produce hundreds of the choices Silvers in the future.

* * *

Here is an exact copy of an advertisement which appeared in the New York Evening Telegram recently:

"ONE incubator, outdoor brooder; a few of thoroughbred wide winded chickens for sale; $30 takes all. SOFRAN, Sparkill, N. Y."

Will somebody please describe the variety of chickens described in the above advertisement?



* * *

The Frankfort, (N. Y.) Show, dates have been changed from January 25th to 28th, to February 5th to 8th, 1907. This was done in order not to conflict with the Schenectady Show.

* * *

Mr. Joseph B. Thomas, Jr., proprietor of Valley Farm, Simsbury, Conn., has started on a long horseback and hunting trip through Texas, Mexico and up to Colorado. Mr. Thomas expects to look up the chickens and wild fowl on the trip and will report on same for the American Fancier, on his return.

H. M. POCKMAN.....Associate Editor

SUBSCRIPTIONS.

Subscription, $1.00 per year.
Foreign subscription, $1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE

All matter, advertising or otherwise, must reach The American Fancier, Johnstown, N. Y., or 26 Cortlandt Street, New York City, not later than Monday afternoon of the week in which the same is to appear.

ADVERTISERS.

The advertising rate in The American Fancier is one dollar an inch for a single insertion. Rate card giving prices and discounts on quarterly, half yearly and yearly contracts sent on application.

CLASSIFIED AD RATES.

Forty-two words or less one time, fifty cents; three times, $1.00; thirteen times, $4.00; twenty-six times, $6.00; fifty-two times, $12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

ISSUED BY THE AMERICAN FANCIER PRINTING & PUBLISHING CO.
EVERY WEDNESDAY.

Publication Office,
North Market St., Johnstown, N. Y.

Editorial Office,
Havemeyer Building, 26 Cortlandt St.,
New York City.
Telephone 6252 Cortlandt.

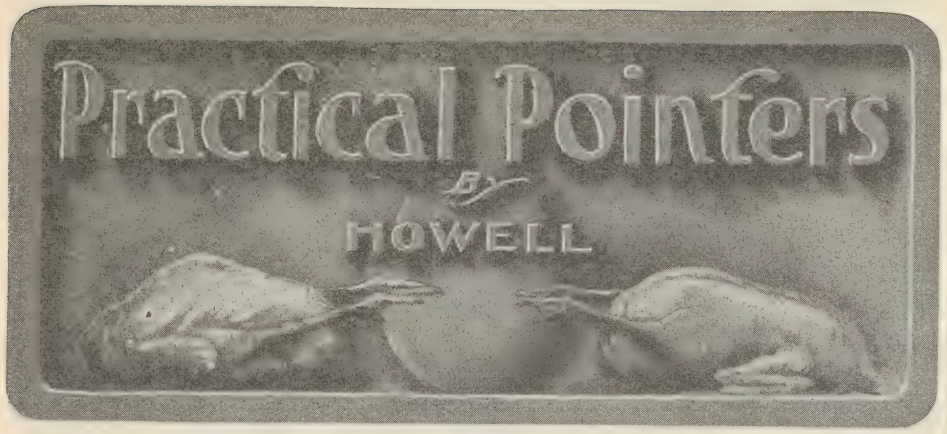
COLORED PICTURE FREE.

On the receipt of fifty cents we will send the American Fancier every week for the period of six months. This covers the coming show season, and as all shows, big and little, are reported each week in the American Fancier, readers will know who is doing the winning and keep posted. In addition to this we will present each new subscriber with a handsome colored picture, suitable for framing, free. This beautiful colored plate was made from a painting by Louis P. Graham of the Champion Buff Plymouth Rock Male in America. It is a work of art and should be in every collection of fine poultry pictures.

Beginning with this issue, the date of publication of the American Fancier will be Wednesday instead of Saturday each week. This change is made in order to get the American Fancier before our readers before Saturday of each week. We are simply following the custom of all other progressive weekly publications in printing and mailing mid-week. Advertisements will close in the future on Friday noon of each week.

Every breeder and exhibitor needs a new edition of the American Standard of Perfection. Price $1.50. Can be obtained from the American Fancier office.

The handsome colored supplement of America's great Buff Rock male, reproduced from Louis P. Graham's beautiful painting, can be had for ten cents. It's worth a handsome frame. Send a dime to the American Fancier office and you will get one by return mail.



We sell all the leading publications devoted to poultry, pigeon and pet stock culture. Send for a list.

Readers will oblige us greatly by sending personal news items of interest to this locality. It will get our readers in all sections acquainted with each other.

Secretaries of poultry and pigeon exhibitions will confer a favor by sending in their reports and awards as promptly as possible. We want the news when it is news.

Try a six line classified advertisement for a year. It costs less than twenty-five cents a week. It's a winner.

The best readers and fanciers are the best buyers. This is the class that patronize the American Fancier.

To sum up, there is not much in the poultry business to look forward to. Three months of continued cold weather, many demands on one's time and not a great lot of profit.

Yet in a certain sense, it is to the poultryman, what investing capital is to the money lender: each looks to get it all back and more, in the future.

Care bestowed upon the flocks may not bring an immediate return, but later, during the breeding season, it will show.

To begin a winter's day, let them spend an hour scratching among the litter, then a warm breakfast if you still have faith in mash feeding; later, water and turn them out if the sun is shining and no searching wind blowing.

On days of this kind, when all humanity is uncomfortable, I believe in keeping them inside at work.

Do not be in too much of a hurry to get them out doors in the morning; wait until the sun is well up and all danger of frost-bitten combs is past. As I have just said, the pay for these little extras comes in the breeding season.

For the benefit of fellow sufferers, will say the egg question looks brighter this week. The festive cackle of the hen is heard more often about the farm, and everything points to a general resumption of business.

Have added a portion of gluten feed to the ration, and although the help still prepares the mash, I have been putting the ingredients together myself.

We have also started to feed the mash warm, not taxing the fowls' energy to warm it, thereby giving them all the encouragement possible.

Shape is often ignored in the breeding pen, being overshadowed by color.

Admitted color is a good thing to have in a breeder; shape is equally as important—good or bad it will be transmitted to the progeny for this and several succeeding generations.

I know it takes a lot of nerve to throw out a grand colored bird because it is off in shape, but there are too many breeds to admit of any relaxation as regards perfect type, each breed must have its distinct type and adhere to it.

Talking about rich golden buff, our buff breeders are certainly getting poetic. Here is one who speaks of his dreamy and languishing shade of buff, admired so greatly by those who have seen his flock.

We are not behind the times, were working in the farther end of one house, and glancing up, I thought I saw the sun shining in a remote part of the house where its rays do not reach. Thinking that was unusual, I looked again, and saw it was a Buff Wyandotte cockerel. Next!

The Rhode Island Agricultural College desires to put on an egg laying contest.

This college has given much help to poultry raising and all who desire to enter the contest, or wish information relative to it, should address Mr. J. Willard Balte, Kingston, R. I.

NEW YORK MARKET.

EGGS.—Receipts, 5,454 cases. Trading under the call of the exchange was characterized by extreme activity and high prices for western firsts. Sales in detail were 25 cases northern Ohio firsts f. g. spot, at 36½c, 25 cases western firsts at 36½c, 25 ditto at 36½c and seven 25-case lots of western firsts at 36c. The general position of the market has not changed since the week opened. Fresh eggs are so scarce that sellers readily control the market. Consumption has been reduced from 25 to 30 per cent in Greater New York owing to the prices demanded by retailers. It is believed that the cold weather in the producing sections will curtail supplies to a still greater extent than has existed since the middle of November. The demand for refrigerator eggs is increasing and prices show a hardening tendency. Fancy marks are generally held at 25c. Very good Aprils can be had at 24c. There were no changes made in the office prices. Nearby eggs of the white variety, which are not officially quoted, are about 2c higher.

DRESSED POULTRY.—Receipts, 4,645 packages. There was no improvement made in the several varieties, and on average grades lower prices were easily established. Turkeys are in heavy supply and all conditions favored the buyer. Some very good lots of western were freely offered at 14@15c. Chickens eased off ½c. Fowls show a decline of ½c. Ducks, geese and squabs were unchanged. Iced poultry was more or less neglected, buyers with few exceptions giving prefence to dry-packed.

The half-tone on title page of this issue represents two Fantails bred and owned by that well-known western breeder William Schock, Chicago, Ill., who last season at Boston cut such a figure.

Mr. Schock has from time to time purchased the best obtainable and has at last established a strain which will take some beating. Both birds reproduced on the title page are well known western winners.

Our western friend had every intention last season of exhibiting at the eastern Fantail Club meet at New York, in fact made entries, but was too late, and we hope this season he will be represented at the Garden.

Fantails are now causing a considerable stir among the fanciers. The first cause of trouble was Mr. Gray's defeat at the Palace show recently held in England. It seems it was a hard blow for one who usually holds the premier honors at the large shows to be content with only two first, few seconds, etc. But we must remember better birds are produced every year, and what is more important, more fanciers are producing these specimens.

* * * * *

In another column we publish a letter from Mr. Johnson in the "Pigeon News." We see by this Mr. Johnson will try and be severe, in placing his awards, but we are afraid when he enters the aisle to judge he will be at a loss to know just what to pass in this respect, just as many others have done heretofore. The judge must remember saying a certain specimen has been faked, laced, plaited, etc., and proving same is quite a different proposition.

Of course Mr. Johnson can hold the awarding of his own cups to any days he may see fit, but how little confidence is really thus displayed in a variety where specimens are bred so near perfection, as the Fantail.

The specials offered by the Eastern Fantail Club, viz.: silver medals, we would like to see awarded the best bird of the color as soon as the judging of the regular classes was completed.

It seems strange whenever a bird is penned with an even well set tail, the cry of lacing, etc., is heard, but from who, in most all instances by those whose birds would be beaten even if the tails were entirely cut off, they would win on body proportion, station, etc., alone.

But this season it is going to be quite different. Would suggest holding the judging of Fantails at all our coming shows on the last day of the exhibition.

* * * * *

The Auburn Poultry and Pigeon Show held January 7-12, 1907, will be the sixth annual exhibition of the Auburn Fanciers' Association held under the auspices of the 2nd Separate Company, in one of the largest Armory halls in the state. This exhibition will be held under the American Pigeon Club rule. A grand list of specials, consisting of cups, cash, etc., will be competed for.

* * * * *

Wm. J. Stanton, who refused to judge Carriers at the coming New York show, will probably judge Homers. At the present time he is busy at Providence. A variety which should attract Mr. Wm. J. would be the cats and was sorry to see Mr. H. V. Crawford did not place a section of this department under Mr. Stanton. Whether the exhibit or the exhibitors are the attraction we cannot tell, but there is an attraction.

* * * * *

At the coming Boston Show the following judges have been named: E. H. Barnes, Dragoons; R. D. Croft, Carriers and Barbs; H. T. Davenport, Homers, Geo. Eustis, Muffed Tumblers; F. W. Gorse, Clean Leg Tumblers and Jacobins; Geo. Horseman, Show Homers; A. M. Ingram, Magpies; Sam'l Johnson, Fantails; Dr. Chas. H. A. Meyer, Orientals, Turbets, Owls, Swallows, and Trumpeters; E. B. Page, Pouters and Pigmies.

* * * * *

The classification is very liberal. Pouters have 24 classes, Runts 15 classes, Pigmy Pouters 28 classes, Carriers 12 classes, Fantails 21 classes, Trumpeters 3 classes, Barb 3 classes, Short Face Tumblers 9 classes, Long Face Chain Leg Tumblers 72 classes, Muffed Tumblers 63 classes, Parlor Tumblers 9 classes, Tipplers 9 classes, Jacobins 18 classes, English Owls 12 classes, African Owls 15 classes, Chinese Owls 12 classes, Oriental Frills 33 classes, Turbets 15 classes, Magpies 18 classes, Swallows 30 classes, Nuns 9 classes, Archangels 6 classes, Show Homers 18 classes, Dragoons 30 classes, Exhibition Flying Homers 33 classes, Shields, Ice Pigeons, Helmets, Polish Lynx, Swifts, Frillbacks, Carneaux, Austrian Strausses and Antwerps 3 classes each, Maltese Hen Pigeons 27 classes, Hungarian Hen Pigeons and any half breed or Cross for Squab Breeding, 3 classes each.

Record Homers 13 classes, Any Variety not mentioned 3 classes. Selling classes $2.50, $5.00 and $10. Displays for Frills, Fantails, Tumblers, Flying Homers, Jacobins, Nuns, Pouters, etc.

* * * * *

W. H. Shipman, who has been breeding Nuns in partnership with Mr. Washburn of Taunton for the past few seasons, will probably be unable to show this coming season, owing to Mr. Washburn's removal from Taunton, Mass., to Salem, Mass. Their entry will certainly be missed, for the past few years they have shown and won with many ideal specimens, mostly imported or bred from imported parents.

* * * * *

Mr. A. E. Robsts, the great and only breeder of Helmets and Hollanders, showed a great string at Paterson, N. J. We understand Mr. Geo. Spohn pronounced them the best exhibit in the show of any variety.

OPEN LETTER TO MR. CATE.

Dear Sir:—

I am glad of the opportunity which your letter gives me to define my position toward made tails at the next Boston show. I have always been one of the most outspoken opponents of any work on a fantail's tail which altered the natural position of the feathers. At last year's show I found myself in an anomalous position. The birds were so generally assisted that had I passed all made tails there would have been virtually no competition, and in the absence of any previous notice to exhibitors, I was not prepared to administer such drastic treatment. I therefore judged the birds as shown, for no middle course was possible. I now take this opportunity to state that at the coming show any birds which in my judgment have made tails, as the result of lacing or of any other manipulation which alters the natural position of the feathers, will positively be passed. Also, the cups which I offer for the best young white, black and red or yellow, will not be awarded until Friday of show week. My object is to insure as far as possible their going to natural birds. In the by no means impossible event of a first bird showing subsequent unmistakable signs of prohibited manipulation, such bird will be passed and the cup awarded to the next in line.

SAMUEL JOHNSON.
In "Pigeon News."

LIST OF SPECIALS FOR PIGMY CLUB MEET.

Every member is requested to lend his efforts to swell this list.

1. T. M. McIntyre $10 Fountain pen, best two 1906 blue cocks bred by exhibitor.

10. New York Show, $25.
11. Novice Cup.
12. Annual Young Bird Cup.

A special Club ribbon with each first prize.

E. C. DUFFY, Sec'y.

FLIGHTS.

By E. C. Duffy.

From information gathered through the breeding season, this has been the banner year for breeders of fancy pigeons in every variety. The pigmy men, of whom I am the best informed, invariably report both quality and quantity away above the average. This will be verified at the meets, and if all the wonders are not entered in celestial books, we may look for some amazing specimens.

Have not heard of any serious epidemic through the country this season. Chickenpox has been very prevalent in all sections, which, however, is fatal in a very small percentage of cases. While it is a hideous appearing malady and one that is likely to give a novice the horrors, it is easily cured and leaves no bad effects. It appears as a wart at first on any part of the body, legs or feet, and if not checked will grow to enormous size in a short time, but if not on the beak or eye cere, it need not be worried about, for it will dry or rather wither (it is always dry) die and drop off. Should it appear on the beak or eye cere, attention should be given it at once, for it is likely to go into the mouth, where it seems impossible to check it, and will grow until it chokes the bird or fills its mouth so it cannot be closed, and the bird will starve to death. The remedies used with good results are Glacial Asetic Acid, carefully applied with the point of a tooth pick to the wart only. Be careful not to let it touch the unaffected parts. A 5 per cent. solution of nitrate of silver applied with brush or feather—this is a good remedy for cankery, or scrofula disease, as it has wonderful healing as well as caustic qualities.

The result of the election of officers of the A. P. A. and the selection of the place of meet for 1907 follows: The polls closed Nov. 30, 1906, with the unprecedented vote of 119 ballots. The straight "Duffy" ticket went through like a breeze, and I wish to thank my many friends for their loyal support. I can promise them a fair and square deal in every respect and the conduction of the club's affairs on strictly business principles, besides much improvement in methods and beneficial innovations by our honorable officers elect that was not possible under the old regime.

For place of meet: New York, 50; Chicago, 46; Boston, 15; Cincinnati 3.

For president: Dr. W. A. Gibson, 114—elected; E. C. Duffy, 1; Wm. Elinger, 1; A. B. Hoskins, 11; L. A. Jansen, 1.

For 1st vice president: K. J. Muir, 111—elected; Dr. Chas. H. A. Meyer, 1; Dr. Gibson, 11; A. B. Hoskins, 5.

For 2nd vice president, M. A. B. Hoskins, 112—elected; K. J. Muir, 5; R. Sweisfurth, 1; L. W. Hyde, Jr., 1.

For secretary-treasurer, Mr. Richard Whitney, 110—elected; E. C. Duffy, 8.

For chairman of Protest Committee: Mr. A. D. Robinson, 117—elected.

For members of Protest Committee the four highest are: Dr. C. H. A. Meyer, 70; Chas. F. Wagner, 62; Pennack Powell, 61, and F. H. Wright, 43.

Counted and approved by Mr. Edw. S. Schmid and Joseph F. Bardsoff, Dec. 1, 1906.

The question of restricting the keeping of poultry and pigeons in the District of Columbia was decided against the breeders and a police regulation promulgated, as is told in the following clipping from the Washington Post, Dec. 1, 1906:

BAN ON THE CHICKENS

Permit is Necessary in Order to Keep Fowls.

NEIGHBORS HAVE A VOICE.

Owners of Poultry and Pigeons Must Obtain the Consent of the Health Officer and 75 Per Cent of the Residents Within One Hundred Feet in Order to Keep Them in the District.

Unless the owners of chickens and pigeons can secure the good will and consent of the District health officer and of their neighbors, they will be forced to part with their pets, for the Commissioners yesterday approved the regulation restricting the keeping of live fowls within the District.

Efforts of pigeon fanciers to have their pets excluded from the provisions of the new regulations were in vain, and the birds have been placed in the same class with other live fowl. The new regulation will be known as section 6, Article VII, of the police regulations, and reads as follows:

"No person shall keep any kind of live fowls or pigeons in any square or block within the District of Columbia which has 75 per cent. of its territory improved without first having obtained a permit to do so from the health officer of said District, which permit shall prescribe the conditions under which fowls and pigeons shall be kept; nor without having obtained the consent of 75 per cent. of the residents within a radius of 100 feet from the boundaries of the premises upon which fowls or pigeons are to be kept. Provided,

however, that such fowls shall not be permitted to run or stray beyond the boundaries of said premises; and, provided further, that this regulation shall not apply to fowls or pigeons confined in coops in regularly established provision or commission stores or public markets, or homing pigeons.

"Any person violating any of the provisions of this section shall be fined not less than $2 and not more than $10, and each day fowls or pigeons are kept or permitted to run or stray, as above provided, shall be deemed a separate offense hereunder."

All preliminary arrangements have been completed and at the last meetings the final touches are put on all matters pertaining to the Washington show. The selection of the judges was announced, for pigeons, A. D. Brown, E. C. Duffy, J. F. Bardroff, C. Hugh Duffy, Chas. Dismer and Geo. Krous. Copy for the premium list was all turned in with a large list of specials, which in most cases were placed by a committee as evenly as possible, every variety getting a share. The premium list will be issued and mailed at once. Any one failing to get one will please notify the secretary, Calvin Hicks, Rockville, Md. Show date, Jan. 22-26, 1907. Entries close Jan. 10, 1907.

SPECIAL PRIZES FOR PIGEONS.

FANTAILS.

The Boston Show offers:

Cup for best six Fantails of the same color, 2 cocks, 2 hens and 2 young birds.

CLASSIFIED ADS

Notice.—No every other week or once a month contracts for classified advertisements will be accepted. See editorial page for classified ad rates.

PLYMOUTH ROCKS.

WHITE PLYMOUTH ROCKS at Owen Farms include the entire flock of the late H. W. Graves. This strain has produced more winners for the leading shows than all other strains combined. The finest flock of this strain ever raised is now on our farms. Our Buff and Barred Rocks are equally good, and we offer you sure winners, and good breeding birds of all three varieties that will please you. Our illustrated catalogue is yours for the asking, and will tell you about our farms and our birds. Owen Farms, Box J, Vineyard Haven, Mass. 677-728

WHITE PLYMOUTH ROCKS. FISHEL'S are the best in the world, winning more prizes at World's Fair than any other two White Rock exhibitors. My new 48-page catalogue is the finest poultry catalogue ever issued. Send three 2-cent stamps for a copy. 5,000 birds to sell. Address U. R. Fishel, Box D, Hope, Ind. 643-694

EDDY'S BUFF ROCKS EXCLUSIVEly.—I have three hundred breeders mated for best results. Extra good layers. Eggs, special mating, three dollars per thirteen; regular $2 layers, $1. Discount on large orders. The Poplars, D. B. Eddy, Prop., Somerset, Mass. 643-694

CANADA'S BEST BARRED and BUFF Rocks.—I have mated some of the grandest specimens of these two varieties that can be found. Will give excellent value in eggs and stock. Fine illustrated catalogue on application. Eggs, $3.00 and $5.00 per setting. Stock for sale. J. R. Boyce, Box 412, London, Canada. 647-698

BARRED PLYMOUTH ROCKS. BRADley Bros. Strain pure. Over 500 birds for sale, old and young, with quality to win in any company. Catalogue with photographs of my winners and list of winnings free. Blue Barred Farm, F. H. Castner, Propr., Glen Gardner, N. J. R. F. D. 1.

BARRED ROCKS OF QUALITY—MY winnings at the leading shows a proof. A positive guarantee with every bird I sell. Your money back if not as represented. Mating Barred Rocks for results a specialty. W. A. Mason, Ashland, Ohio. 671-722

A LARGE NUMBER OF EXHIBITION males and females for sale. Also a few old breeders. Winners of State Championship at Cincinnati, Ohio. Satisfaction guaranteed every time. Eggs in season, $3.00 per 13. C. W. Rollins, vice-president American Buff Plymouth Rock Club, Ashland, Ohio. 671-722

BUFF PLYMOUTH ROCKS EXCLUsively. Fourteen years a breeder of this variety. Winners at the good shows all these years. Some excellent exhibition birds for sale, shape right, color right, birds scoring up to 93½ by Hewes and Pierce. Phil. Fiel, Canal Dover, Ohio. 675-691

FOR SALE.—Choice exhibition White Plymouth Rock cockerel, Fishel strain, sired by cock heading my first pen at Cambridge, '06, snow white, weighs about 7 lbs. and growing fast. Sure winner in January. Price $15.00. M. B. Gould, Granville, N. Y. 680-682

BUFF PLYMOUTH ROCKS.—Fine shape, low combs, rich Buff. Winners Cincinna ti,Louisville, Danville, Frankfort, Lexington, Kentucky. Blue Grass Poultry Show, 1906, 1st hen, 1st and 2d cockered, 1st and 2d pullet, 1st and 2d pen, by T. E. Orr. Stock on approval. W. B. Buford, Vice-President, Nicholasville, Ky. 677-689

SHOW COCKERELS A SPECIALTY.—Won 2d and 3d at the great Brockton Fair just held. Have won at Boston, Springfield, Lenox, Stamford. No one has better; few as good. We are sure to please you. Thos. Briant, Lenox, Mass. 677-689

HIGHLAND POULTRY FARM, Barred Rocks exclusively, Bradley's strain. 500 cockerels, pullets, hens and cocks for sale. Give me a trial and I will guarantee to please you. H. L. Fike, Meyersdale, Pa. 678-680

HAYNER'S BARRED ROCKS AGAIN victorious. At White Plains show, 1906, 4 firsts, 2 seconds, 2 thirds, 2 silver cups, and 5 specials. At the great Poughkeepsie Fair, 6 firsts, 2 seconds. Our stock has won highest honors at New York, Albany and other leading shows. Stock for sale. Highest quality, lowest prices. Satisfaction guaranteed. Write your wants to Jonas Hayner, Mgr., Livingston Co., N. Y. 667-719

EXHIBITION PULLETS

can be furnished for the early shows.

4 PRIZES ON 5 ENTRIES,

at the last Cleveland, Ohio, Show, shows the quality of my stock. Birds for sale, singly or in pairs; trios or pens. Anyone wanting good pullets or hens can find them here. 677-685

Mrs. Harvey Miller,

Louisville Road, Canton, Ohio.

10 Cocks, 15 Hens, 15 Cockerels, 20 Pullets

WHITE WYANDOTTES

Have been carefully SELECTED, APPRAISED and PRICED. These are in our fitting house for development and preparation for SHOW. Will be SHOWN, SOLD or BRED.

This lot of sixty is, we believe, the best we have ever seen belonging to ONE FARM.

We have about 500 young and old, most of which will be sold at prices much less than the choice birds referred to above.

A. L. SPARKS, Swainton, N. J.

WOODCREST FARM

RIFTON, ULSTER CO., N Y.

Breeders of Barred Plymouth Rocks,
White Wyandottes and Light Brahmas

OUR BIRDS have been leaders at the leading shows for the past ten years. We have thirty-nine choice pens mated for this season's breeding and are booking orders for eggs at our usual price of $3.00 per single setting; two settings, $5.00; three settings, $10.00. A few choice breeding birds left. Address correspondence to

JAMESBURG, N. J., U. S. A. 645-697

WE WANT NAMES

We want YOU to send us the names and addresses of from ten to twenty-five persons living in the United States, each one having twenty-five hens or more. You can send us the names from any number of different postoffices. If you will send us these names we will send you TWO BEAUTIFUL COLORED PICTURES FREE. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten names.

We want to send a free sample copy of a special issue of the HOME MONTHLY (The National Poultry Journal), to a lot of poultry raisers who are not now taking our paper and for that reason we want these names.

Send us immediately a list of at least ten poultry raisers and we will mail you, postpaid, ABSOLUTELY FREE, TWO REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES, beautiful colors, size 15x20 inches. Address: THE HOME MONTHLY, 20 North William St., New York.

I EXERT MY EVERY EFFORT IN BREEDING EXHIBITION

White Plymouth Rocks

I have raised GOOD ONES, and have in my yards WINNERS at HAGERSTOWN, CLEVELAND, CHICAGO, and of many smaller shows. 677-689

ALEX. ROBINSON, Uhrichsville, Ohio.

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book, which is revolutionizing the poultry business all over the country.

My great FEED @ $.10 per bushel will save you $25.00 on every 100 hens you feed a yr, as well as increase your egg yield over 30 p. c. Nothing like it ever discovered for producing winter eggs and fertile eggs. For growing chicks, it has no equal. No mashes or cooking feed under this great system. Broilers grow 1¼ to 1½ lbs. in 7 weeks on this great feed. No science required to feed my system. Failure impossible. Circulars and testimonials free. Write to-day and stop that big feed bill.

Box O. EDGAR BRIGGS, New Rochelle, N. Y. 672-723

Special mention for Pens—James C. Kelly, E. E. Boyce, De Graff Poultry Farm.

Pigeons—George H. Baird.

PATERSON, N. J.

December 5-8.

The second annual exhibition of poultry and pigeons has just been held at Paterson, N. J. The show proved to be a great success, both in quality and numbers of birds on exhibition. The members of the association all turn in and work for the show as well as exhibit, the result being a larger hall will be necessary to accommodate the birds at the next show.

White Rocks, White Wyandottes and S. C. White Leghorns lead the other varieties in numbers. The Short Hills Poultry Farm's White Rock hens and the White Wyandotte pullet of Deepdale Poultry Farm were both stars among a lot of other extra good ones. In Light Brahmas, Chas. J. Frost, the hustling secretary of the show, and Holden Rigley, the president, divided the honors officially and otherwise between them. Llewellyn Poultry Farm showed excellent S. C. Black Minorcas. The Orpingtons of Wm. J. Housby were beautifully conditioned.

The awards follow:

LT. BRAHMAS—Cock 1-3, hen 2-3-4, cockerel 2-3, pullet 1-3, pen 3-4 Chas. J. Frost, Paterson; cock 2, hen 1, cockerel 1, pullet 2 Holden Rigby, Paterson; cock 4, cockerel 5, pullet 4 Jas. Greenwood, Paterson; cock 5 Richfield Valley Poultry Yards, Richfield, N. J.; hen 5, pullet 5 Jos. L. Bustard, Paterson; pen 1 Chas. Schoonmaker, Signac, N. J.; pen 2 John C. Ploch, Paterson.

BUFF COCHINS—Cock 1 James Heathcote, Paterson.

PARTRIDGE COCHIN—Pullet 1 Deepdale Farm, Great Neck, L. I.

BLACK LANGSHAN—Cock 1, pullet 1 A. A. Winkler; cock 2, hen 1-2, cockerel 1, pullet 2-3 Wm. B. Freeburn, Sparkill, N. Y.

BARRED P. ROCKS—Cock 1, hen 3, pullet 1 Edgar Waite, River Edge, N. Y.; cock 2, hen 2-5, cockerel 2, pullet 2, pen 1 John Swayck, Englewood, N. J.; cock 3, cockerel 3, pullet 5 C. S. Jensen, Dover, N. J.; hen 1, pullet 3 W. S. and H. O. Vosburgh, Fremont, N. Y.; hen 4, cockerel 5 John Davies, Browertown, N. J.; cockerel 4 Deepdale Farm; cockerel 1 Frans Geisler, Butler, N. J; pullet 4 Wm. G. Hull, Ridgewood, N. J.

BUFF COCHIN BANTAMS—Cock, Mrs. Weir; hen, Engelsman & Co.

WHITE COCHIN BANTAMS—All to C. F. Hulet.

RED PYLE GAME BANTAMS—Cock 1, hen 1-2 Steinhauser.

WHITE GAME BANTAMS—All to Oak Lawn Farm.

WEST HAVEN, CONN.

November 20-22.

The West Haven Show panned out big in quality and numbers. Asiatic classes not so large, but good birds shown, notably Black Langshans. Mediterranean classes splendid, White Leghorns, both single and rose comb, large entries, a rose comb hen winning color special for whitest female in the show, a rose comb cockerel doing the same stunt as whitest male. Single comb Brown Leghorns equal in quality to anything seen at New York or Boston. First hen an old time winner, never having been defeated. Quality of males not so good, but still very high class. Rose comb Browns very fine, especially first and second cockerels and first cock, noticeably well-striped in hackles and saddles and grand color, first cockerel being a perfectly poised bird in shape and carriage. In the Buff Leghorn classes many fine birds were seen, but first hen and first pullet in single combs the cream of the lot. Black Minorcas good classes, but first and second cockerels in a class by themselves. Orpingtons, well filled classes with awards well split up, the prizes in Buffs going to nine exhibitors. Single comb Rhode Island Reds very large classes. First cockerel a grand colored red, very even in and out but somewhat leggy, although having a fine shaped body; second cockerel, good shape and fairly good color; third very finely shaped but has too many contrasts in color. First cock an old timer that always carried the blue; hens fair; first and second pullet grand birds of their kind in color and shape, the former most even in color; pens very fine, first especially so, the birds being very even in color throughout. Rose comb Rhode Island Reds a grand lot throughout, first cockerel winning shape special for both classes. Barred Plymouth Rocks, Albert Stoner, "that's all." Buff Rocks, grand true color throughout, but birds looked a bit too leggy and were not as shapely and well distributed, no one getting all the should be. White Wyandottes a battle of Connecticut giants and prizes plums, eight exhibitors dividing the honors. First pullet the leader of the class; first cockerel white and that's all, still shapely enough to merit the blue. Buff Wyandottes another class spread out among several as regards ribbons; many crackerjacks seen. Columbian Wyandottes grand large classes, a demonstration that proves the breed is here to stay. Bantam classes well filled with some great birds in the Buff Cochin classes.

Below are the awards: C.

BRAHMAS, Light—G. R. Payne, 1 cock, 3 hen, 2 cockerel, 1 pullet; G. V. Smith, 1-2-4 hen; Thompson & Dellert, 1 cockerel, 2 pullet, 1 pen. Dark—Thompson & Dellert, 1-2-3 cockerel, 1-2 pullet. Buff—L. B. Fowler, 1 cock, 1-2 hen, 1 cockerel, 1 pullet, 1 pen.

WHITE COCHIN BANTS—All to Ben Brundage.

LIGHT BRAHMA BANTS—All to Woodside except pullet 2 Hickock.

GOLDEN SEBRIGHTS—All to Mignery.

B. B. RED GAME BANTS—Cock 1 Pettit, 2 Stryker; hen 1 Stryker; cockerel 1-2, pullet 1 Pettit.

BLACK COCHIN BANTS—All to Brown.

WHITE PEKIN DUCKS—All to C. Davis.

AM. DOMINIQUES, JAVAS & BLACK WYANDOTTES—All to G. E. Brundage.

CORFU, N. Y.

November 27-30.

The Corfu Fanciers' Club's 4th annual poultry show held at Corfu, N. Y., is now a thing of the past, and the officers and directors are greatly pleased with the most successful exhibition ever held in the history of the club. The attendance was very satisfactory and Thanksgiving day was a red letter day for attendance, which means a grand financial success not only to the management but to the exhibitor, as many a fine sale was made and large orders for eggs were taken. The $25.00 silver cup offered by the club for the best display of S. C. W. Leghorns was won by R. E. Bunting, the $25.00 silver cup offered by the club for best display of Rhode Island Reds by Ebelheim Poultry Yds, the National White Rock ribbons by J. Thomas Harp & Son, the National S. C. Buff Leghorn ribbons by Wm. Ewald, jr., the National Light Brahma Club ribbons were won by Philander Williams, the National Buff Wyandotte ribbons by E. M. Budlong, the American Rhode Island Red Club ribbons by Ebelheim Poultry Yds. The show was judged by W. F. Brace of Victor, N. Y., giving the best of satisfaction. Not a complaint was heard at the show.

The awards were as follows:

LIGHT BRAHMAS—Cock 1, hen 1 Philander Williams; cock 2, pullet 1, pen 1 Creekside Poultry Yds.

BUFF ROCKS—All to E. Sumner.

BARRED ROCKS—Cock 1, hen 1, pullet 1-2 C. W. Pristner; cockerel 4 E. A. Winchel; cockerel 1, pullet 3-4-5 E. L. Francis; cockerel 2-3, hen 2 Frank Smith.

WHITE ROCKS—Cock 1, hen 1-2, cockerel 1, pullet 1-2-3, pen old 1 J. Thomas Hart & Son; hen 3, cockerel 4 E. A. Winchell; cock 2-3, cockerel 2-3, pullet 4-5, hen 4, pen young 1 J. A. Smith; pen 2 old, pen young 2 C. O. Palmer.

WHITE WYANDOTTES—Hen 1, pullet 3 E. B. Peck; cockerel 1, pullet 1-2 Ebelheim Poultry Yds.; pullet 4 Frank Smith.

SILVER WYANDOTTES—Cockerel 1, pullet 1 Fred Hilgartner; cockerel 2, pullet 2, hen 1-2, pen 1 C. B. Beach.

COLUMBIAN WYANDOTTES—Cock 1-4, hen 1-3, cockerel 1-2-3, pen 1, pullet 1-2-3-5 Mrs. C. W. Whiting; cock 2-3, hen 2-4-5 Dr. M. S. Gooding; cockerel 4, pullet 4 J. E. M. Hiller.

BUFF WYANDOTTES—Cock 1, cockerel 1, hen 1, pullet 1 E. M. Budlong.

S. C. WHITE LEGHORNS—Cockerel 2-4, pullet 3-4, hen 1-2, pen young 1 R. E. Bunting; pen 3, young, B. F. Ward; cockerel 5, cock 4, hen 3, pullet 5 E. Harrington; cockerel 1, pullet 1, pen young 4 Eadie Bros.; pullet 5 H. E. Ward; cock 3, cockerel 3, pullet 2, pen young 2 B. Monroe Posten; pen old 2 Creedside Poultry Yds.; cock 2, pen old 1 N. A. Brown; cock 1 Phelps Poultry Farm.

R. C. BROWN LEGHORNS—Cockerel 1-2, pullet 2-3-4-5, pen young 1 James Crawford; pullet 1, pen young 2 C. S. Snider; cockerel 3-4 Geo. E. Worth.

S. C. BROWN LEGHORNS—Cock 1, hen 1, pullet 1 Ebelheim Poultry Yds.; cockerel 1, pullet 1-3 C. S. Snyder; pen young 1 Geo. S. Sheis; pen young 2 Alfred Knapp.

S. C. BUFF LEGHORNS—Cock 1, hen 1, cockerel 1-2-3-4, pullet 1-2-3-4 Wm. Ewald, jr.; cockerel 5, pullet 5 John Copeland; cock 2 E. B. Peck; pen young 1 Alfred Knapp.

SILVER DUCKWING LEGHORNS—Cockerel 1-2, pullet 1-2 Garret Colby, jr.

S. B. BLACK LEGHORNS—Cock 1, hen 1, cockerel 1, pullet 1, pen 1 R. G. Fluken.

R. C. R. I. REDS—Cock 2-3, hen 1-4, cockerel 4, pullet 2, pen young 3 N. B. Lints; cockerel 3, pullet 3 Garrett Colby, Sr.; cock 1, hen 2-3, cockerel 1-5, pullet 1-4-5, pen young 1 Ebelheim Yds.; cockerel 2, pen young 2 Phelps Farm.

S. C. R. I. REDS—Cockerel 1, pullet 3 C. S. Snyder; cockerel 2, pen young 1 Alfred Knapp; cock 1, hen 1-2, cockerel 3, pullet 1-2, pen old 1 Ebelheim Yds.; cockerel 4 Phelps Farm.

HOUDANS—Cockerel 1-2, pullet 1-2 Ebelheim Yds.

S. C. BLACK MINORCAS—Cock 2, hen 1 Lou Taggart; cock 1, hen 2, cockerel 1-2 Rev. B. Monroe Posten; pullet 1 Chas. Inghram.

S. C. WHITE MINORCAS—Hen 1-2, pullet 1-2-3 H. A. Richards.

CORNISH INDIAN GAMES—Cock 1, hen 1-2, cockerel 1, pullet 1 Eadie Bros.

SILVER SPANGLED HAMBURGS—Cock 1-2, hen 1-2, cockerel 1-2-3, pullet 1-2-3, pen 1, pen 2 Rev. B. Monroe Posten.

BLACK COCHIN BANTAMS—Cock 1, hen 1 Philander Williams.

BUFF COCHIN BANTAMS—Cock 1, hen 2-3, pullet 2-3, pen old 1 James B. N. Fetch; cock 2, hen 1, cockerel 1, pullet 1, pen young 1 B. Monroe Posten; hen 3-4 G. E. Elliott

WHITE COCHIN BANTAMS—Cock 1, hen 1 E. B. Peck.

GOLDEN SEBRIGHT BANTAMS—Pen 1 B. Monroe Posten.

SILVER SEBRIGHT BANTAMS—Pen 1 B. Monroe Pasten.

TOULOUSE GEESE—Gander 1, goose 1 B. Monroe Posten.

KINGSTON, N. Y.

The Kingston, N. Y., show of '06, while not as large in number of entries as last year, was certainly a show of quality, and the able management can well feel proud of their efforts, which were also appreciated by the public, who attended in goodly numbers.

In all classes were birds fit for keener competition, and particularly noticeable was the quality of the birds shown by amateurs. More experience and further attendance at shows will teach them to enter their birds in proper classes for competition. It may be noted that two of the S. C. Buff Leghorn pullets in the winning pen would have been easy winners in the single class. Among the better known exhibitors were Rock Holland farm, (their first White Rock cock being particularly admired); H. C. Craig, with a crack string of Bantams, Chilmark Farm, with S. C. Black Orpingtons and Ducks, their first Orpington cock and hen being the right sort; Glenhurst Farm, with several varieties, all being of fine quality; Oliver Cater, showing his usual crack Silver Wyandottes, winning with birds that are to go to the Garden. Among the amateurs who were there with the goods were Donald Brice, his White Rocks being such as older breeders can feel uneasy about; W. S. Young, with fine R. C. Brown Leghorns; C. T. Smithers, White Wyandottes of fine quality; W. S. Meads Reds of quality in both rose and single comb; H. E. Du Boise's B. B. Red Bantams of the right sort and Supt. A. H. Chambers' Silkies being of a quality seldom seen.

Lloyd M. Hallenbeck judged all classes in a manner that pleased all exhibitors and one must have been convinced that he is painstaking and has learned "how" and "which is which." But one change would have been made by the writer, viz., in B. B. Red Bantams, second hen was preferred to winner. The pigeon display was large and excellent quality shown, as also prevailed in Ducks.

Preparations to make the '07 show a hummer are already under way, and several cash and other specials offered, among them two twenty-five dollar cups, one for Rhode Island Reds and another for S. C. White Leghorns.

The awards follow:

BARRED ROCKS—1-2 cockerel, J. E. Van Wagenen; 1-2 pullet, Glenhurst farm.

WHITE ROCKS—1 pen, 1-2 cock, 1 hen, Rock Holland Farm; 2 hen Ford Tabor; 1-2 cockerel, 1-2 pullet Donald Boice; 3 cockerel, J. E. Van Wagenen.

WHITE WYANDOTTES—1 pen, 1 hen, 2 pullet, W. T. Brannigan; 1-3 pullet, Glenhurst Farm.

BUFF WYANDOTTES—1 pen, 2 cock, 1 hen, E. M. Budlong; 1 cockerel, 3 pullet, R. J. Foster; 1-2 pullet, 2 cockerel, C. T. Smithers.

COLUMBIAN WYANDOTTES — David Bush, all.

S. C. WHITE LEGHORNS—1-2 cockerel, Ford Tabor; 3 cockerel, L. H. Ahrens; 1 pullet, Allen Smith; 2-3 pullet, Glenhurst Farm.

R. C. WHITE LEGHORNS—Albert Lebert, all.

S. C. BROWN LEGHORNS—J. E. Van Wagenen, all.

R. C. BROWN LEGHORNS—1 cock Wm. Whelan; 1-2 cockerel, 1-2 pullet W. S. Young.

S. C. BUFF LEGHORNS—1 pen C. A. Raschke, 2 pen Glenhurst Farm; 1-2-3 hen, Geo. E. Standing; 1 cockerel, 3 pullet, Allen Smith; 1-2 pullet, F. Van Horenberg.

S. C. BLACK MINORCAS—1 pen old, 1 pen young, 1 cock, 1 hen, 2 cockerel, 1 pullet, B. C. Deyo; 1 cockerel, Jno. Kerr.

R. C. WHITE MINORCAS—Geo. Sebert, all.

S. C. BLACK ORPINGTONS—1 cock, 1 hen, Chilmark; 2 cock, 2 hen, 1 cockerel, 1 pullet, Chas. Kniffen.

FAVEROLLES—Chas. Kniffen, all.

SILVER SPANGLED HAMBURGS—P. C. McDonald, all.

HOUDANS—Leon Chambers, all.

R. C. RHODE ISLAND REDS—1 pen, 1 hen, 3 cockerel, 3 pullet W. S. Mead; 1 cock, 1 pullet W. B. Lynch; 1-2 cockerel, Ford Tabor; 2 pullet, Geo. Krapt.

S. C. R. I. REDS—1 cockerel W. S. Mead; 2 cockerel, 2-3 pullet, Glenhurst Farm; 1 pullet, Allen Smith; 3 cockerel, Jos. Gregory.

PIT GAMES—1 pen old, 1 pen young, 1 cock, 1 pullet Jno. Walker; 1 hen, 2 cock, Allen Smith.

GUINEA FOWL—Rock Holland Farm, all.

PEKIN DUCKS—1 drake, 1 duck Chilmark Farm; 2 drake, C. J. Babcock; 3 drake, 2 duck, Glenhurst.

WHITE CRESTED DUCKS—Chilmark Farm, all.

PHEASANTS—E. B. Green, all.

B. B. R. GAME BANTAMS—1 cock, 1 hen, 2 pullet, H. E. Dubois; 2 cock, 2-3 hen, 1 cockerel, 1 pullet, H. C. Craig.

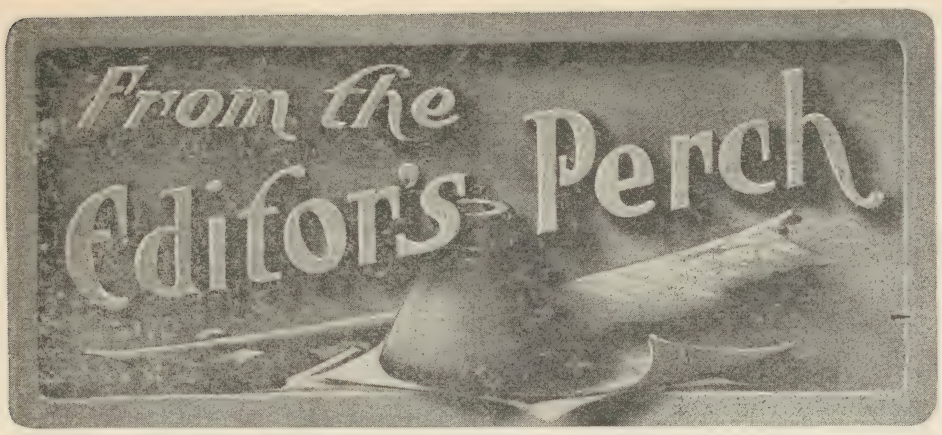
S. D. GAME—Leon Chambers, all.

WHITE GAME—Rock Holland Farm, all.

GOLDEN AND SILVER SEBRIGHTS, BLK. ROSE COMB, BLACK COCHIN—H. C. Craig, all.

PARTRIDGE COCHIN—J. J. Davis, all.

WHITE COCHIN—1 pen old, 1 pen young, 1 cock, 1 cockerel, 3 hen F. E. Miller; 1 hen, 1 pullet, H. C. Craig; 2 hen, Leon Chambers.



JAP SILKIES—Leon Chambers, all.

PIGEONS.—Silver, Dun, Blue Check, Splash, Black, White, Homers, Blue Fans, Yellow Pouters, Pigmy Pouters, Archangels, White Jacobins, Frill Backs, Barbs—Jas. J. Davis, all. White Antwerps, White Duchess, Parlor Tumblers—W. S. Mead, all. Blue Barred Homers—1 Davis, 2 Ralph Short. Black Carriers—1 R. Short, 2 J. J. Davis. White Fantails— R. Short, all.

LIKE OLD TIMES.

Seems like old times to be getting the "Fancier" once more with "Drev's" editorials. Am glad it has returned to its original state, with improvements.

OWEN FARMS,
Maurice F. Delano, Mgr.
Vineyard Haven, Mass., Nov. 9, 1906.

New York next week.

* * *

Notwithstanding the increased entry fee and the limitations regarding entries, the Madison Square Garden Show of 1907 will eclipse all previous ones and stand alone, in some respects, among the poultry shows of the world.

* * *

Mr. H. V. Crawford, secretary of the New York Poultry and Pigeon Association, telephoned us a few days after entries had closed and announced the following totals: 2343 large poultry and ducks, 105 turkeys and geese, 365 bantams, 248 exhibition yards, 1,800 pigeons, 132 rabbits and cavies. This means that $11,246 in entry fees have been received. Add to this the fees for display pens at $20 per and the space privileges, at four dollars a foot, a pretty clear idea of the magnitude of this great show will be had. The banner class in the show is White Plymouth Rocks.

* * *

If people would stop to think, and especially some of our friends in the West who claim so much in big things, let them analyze the entries mentioned above. Three dollars a bird entry fee is an unheard of proposition in this or any other country. Limiting the entries to a stated number of birds is another. And yet all this happened in the effete East and through and by the "Major Domo," the conservative Mr. Henry V. Crawford, secretary. Stop and think, fanciers and others. To say more would stop your thinking.

* * *

Our old friend, Mr. G. O. Brown, writes that unintentionally he omitted the name of Mr. F. J. Marshall, as one of the judges at the Charleston (S. C.) show in his report and asks us to make mention of this fact. We do this with pleasure.

* * *

The premium list of the Westchester County Poultry and Pigeon Association is one of the best and most easily comprehensible books of the kind ever issued. The credit for all this is due to Secretary "Jim" Fitch, Superintendent Frank Gaylor and the printer.

* * *

Mr. B. C. Fincke, secretary of the American Exhibition Game and Game Bantam Club, made a flying visit to our office one fine morning last week and just bubbled over with enthusiasm over the entries of Games and Game Bantams at New York, and what will happen when the club meets in the historic old Madison Square Garden. There is a new era dawning in the Game and Game Bantan business, thanks to the new life instilled in the old club.

* * *

Mr. Arthur C. Hawkins, Lancaster, Mass., has been elected by the members of the American Buff Plymouth Rock Club to judge the popular Buff Rocks at Boston. If any one fancier has the ability to handle this variety with success, it is Mr. Hawkins.

* * *

Speaking of the Boston Show reminds us of the following received in a letter written by Secretary Samuel H. Roberts: "Just call attention to the fact that we have divided all exhibition yards this year in all varieties, into classes for fowl and chicks. This should make a strong array of exhibition pens. Through an oversight in making up the premium list, the classes for Black Leghorns and any other variety of Leghorns were omitted, and the Silver and Duckwing Game Bantams were made one instead of two classes. We have provided classes for these varieties and added a class for East India ducks. We are making an effort this year to have the fanciers send in some dressed poultry and hope to make this department an attraction. We have engaged an additional hall, 64x80 feet, leading from the gallery, so do not expect to have to turn any entries away. If any intending exhibitor has not received a premium list he should write for one immediately. I wish you would state that intending exhibitors are requested to send photographs of the birds, plainly marked, with their entries, in order that they may be used by the daily press."

We are glad to give publicity to the above and believe intending exhibitors will appreciate the efforts and courtesy of the secretary of the Boston Show to make the latter a record breaker.

* * *

We enjoyed a most profitable, interesting and social visit with Prof. C. K. Graham, of the Agricultural College, Storrs, Conn., one afternoon of last week. Mr. Graham is full of sound practical ideas on poultry matters and what is still better, is not afraid to express his opinions in clear-cut and forcible English. He is very much in earnest also in his work to build up the Connecticut State Poultry Society. The fact that eight-hundred members are already enrolled indicates the coming power and influence of this organization. The American Fancier will have some interesting data concerning this live association shortly.

* * *

A real old fashioned poultry show is to be held in a real old fashioned town in the State of Connecticut in February, 1907 or 1908. A real old fashioned fancier will be president and an equally old fashioned fancier will be secretary. Only old judges will be employed, but exhibitors can range from five years upwards. Ask "Billy" Holmes, Shelton, Conn.

* * *

Mr. H. W. Buckland, Worcester, England, shipped on S. S. Oceanic, December 19, nine Columbian Wyandottes which have been entered at the Madison Square Garden Show. They will arrive Thursday of this week and will be in charge of Mr. George W. Weed.

* * *

Mr. J. Harry Wolsieffer, who was to start a big egg farm at Hammonton, New Jersey, has changed his base of operations and will locate at Buckhill Falls, Monroe county, Pa. He has signed an agreement with Mr. C. F. Jenkins, Pres. Buckhill Falls Co., to manage a five thousand laying plant, and will start operations January one, nineteen hundred seven. The location is an ideal one, only a short distance from the famous summer resorts of Water Gap, the city of Stroudsbury and right in the heart of one of the greatest outing places near New York and Philadelphia.

* * *

Mr. Rowland Story, master of the Arlington Poultry Yards, Brooklyn, N. Y., had the misfortune last week to lose by suffocation nearly all of his adult Black Minorcas, including his famous hen, "Lady Arlington." It all occurred in the exhibition house and an oil stove was the cause. We don't know whether it was Standard oil or not, but both stocks are down, especially Story's—they are down and out. He has, however, plenty of young stock in reserve and will appear in the Garden next week, prepared to meet all comers in those classes. But there will be crape on several coops of old 'uns, instead of occupants. It's a case of hard luck and faith in oil. While we sympathize deeply with Mr. Story over his loss, we must not lose sight of the fact that oil, gasolene or any other old heat in a chicken house is contrary to laws that govern modern chicken culline.

* * *

The Johnstown Show, held December 11 to 14, like its predecessors, was strictly a fanciers show. It was not as large as in past years, but it was all to the good in quality, finely managed, excellently cooped and from our standpoint the prettiest exhibition we have ever seen in Kennedy Hall, Johnstown, N. Y. And we have seen all of them. President Wemple, Secretary Mosher, Supt. Sutliff and the members of the executive committee did fine work. The banquet of course was a success. The old Adirondack city is famous for its hospitality and we are of the opinion that every one present enjoyed the feast.

* * *

The Barred Plymouth Rocks were strong in number and quality, as will be seen by the awards printed on another page of this issue. Veterans and youngsters competed and honors were even. The cock class was light but good; the hens very good, notably first and second, clean in color and barring. Cockerels a very fair lot, with first decidedly ahead; second not so far behind, but young. Pullets a great lot, first, second and third good enough to show anywhere. Pens strong, first pen of chicks outclassing all others. White Rocks a splendid lot, some of the older and best breeders competing. Ask Quilhot who judged them. Buff Rocks as good as can be found anywhere, first cockerel winning special for best bird in the show, with third prize cockerel, a young recruit, ready to give battle to the best a month later.

* * *

Wyandottes not as strong as in former years, but quality in Whs and Buffs very fine, with first-class Silvers, Goldens, Partridge and Columbians to keep up the reputation of the old show, even if competition was not as strong as expected.

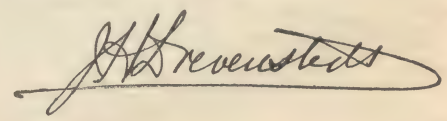
* * *

Rhode Island Reads great classes, DeGraff showing the finest pen we have ever seen. Artist A. O. Schilling is making a painting of the same and it will prove a surprise to the Red men.

* * *

Asiatics small classes, except Light Brahmas which were exceptionally fine in quality and goodly in numbers. Leghorns strong in Whites, cockerels and pullets especially fine as to winners. Buff Leghorns a very fine class in quality. Same may be said of Black Leghorns. Brown Leghorns good in Single Combs and very fine in Rose Combs. Minorcas a good Orpingtons also. As to Games and Game Bantams, everything went to Blunck—that's all, or nearly all.

* * *



Philadelphia's big show will be held February 5 to 9, 1907. The judges selected are: J. D. Nevins, L. P. Graham, F. A. Keller, C. T. Cornman, W. B. Atherton, W. Teo. Wittman, Fred Huyler, A. P. Ingram and R. F. Seaman. This is a good bunch of chicken adjudicators. The secretary, Mr. J. G. Darlington is a veteran fancier and knows the game from A to Z.

* * *

The Wilmington, Delaware, Show follows New York. It's a fanciers' show of the highest grade. Look out for the Diamond State show.

* * *

An American Crested Polish Bantam Club will be organized at the New York Show January 3, 1907. Mr. William G. Minich is the father of the club.

STAMFORD, CONN.

The sixth annual exhibit of the Stamford Poultry Association opened Wednesday, Dec. 5, 1906, in the armory, with everything in readiness for the judges, who were on hand and completed their work long before the doors were thrown open to the public, which was advertised for 5 p. m. The entries, between 500 and 600 in number, were large considering that the Danbury show was being held at the same time, and while not as large as in former years, the quality was very much in evidence.

The list of specials in the Barred Rock class brought a very strong lot, and those that show in New York will have to look out that they are not handed a lemon if some of Stamford's winners are competitors.

Glenbreekin Farm made a display of wild and tame Water Fowl, Pheasants and Pea Fowl.

All things considered, the show was strictly first-class.

Awards as follows:

BUFF COCHINS—Cockerel 1, pullet 1 O. Makowsky.

PART. COCHINS—Cock 1-2-3, hen 1 F. Gallatin, jr.

BARRED ROCKS—Cock 1 B. Cowles, 2 A. Storer, 3 Hill Top P. Farm; hen 1-2 Storer, 3 Van C. Potter, 5 N. M. Ormsbee; cockerel 1-2 Storer, 3 Ormsbee, 4 Andrew Ennis; pullet 1 Potter, 2 R. W. Stoner, 3-4 Storer; pen 1-2 Storer, 3 W. H. Robinson, 4 Old Mill P. Yds.

BUFF ROCKS—Cock 1 A. J. Anderson, 2 B. N. Duclos, 3 Terrace Knoll Yds., 4 A. McArthur; hen 1-2 Duclos, 3-4 Anderson; cockerel 1 McArthur, 2 H. McConochie, jr., 3 Anderson, 4 Duclos; pullet 1-2 Duclos, 3-4 Anderson; pen 1 Duclos, 2 Terrace Noll Yds.. 3 McArthur, 4 Stoney Crest Yds.

WHITE ROCKS—Cock 1 E. W. Crocker, 2 C. Peterson, 3 Terrace K. Yds.; hen 1-2 Terrace K. Yds., 3 Crocker, 4 Althea Farm; cockerel 1 Althea, 2 E. Holbrook, 3 Crocker, 4 Terrace K. Yds.; pullet 1 Holbrook, 2 Crocker, 3 Terrace Yds.; pen 1 Holbrook, 2 Althea.

S. C. R. I. REDS—Cock 1 Theo. Fairbanks, 2 H. R. M. Beers; hen 1-3 Beers, 2 Fairbanks; cockerel 1 V. C. Potter, 2 Beers, 3 Stony C. Yds., 4 Fairbanks; pullet 1-2 Beers.

BUFF WYANDOTTES—Cock 1-2 Horace Havemeyer. 3 Terrace K. Yds.; hen 1-2, cockerel 1-2, pullet 2-3 Havemeyer; cockerel 3, pullet 1-4 Terrace Yds.; pen 1 Havemeyer.

GOLDEN WYANDOTTES—Cock 1-2 Old Mills P. Yards, 3 Ben Brundage; hen 1-2-3-4 O. M. Yds.; cockerel 1-2 Brundage, 3 H. E. Wilson, 4 O. M. Yds.; pullet 1 Brundage, 2 Wilson, 3-4 O. M. Yds.; pen 1 O. M. Yds.

SILVER WYANDOTTES—Cockerel 1 Ben Brundage, 2 O. Makowsky, 3 Worcester Perkins; pullet 1-4 Brundage, 2-3 Perkins; pen 1 Makowsky.

WHITE WYANDOTTES—Cock 1-3-4 H. Havemeyer, 2 West Mountain Yards; hen 1-2 W. M. Yds., 2-3-4 Havemeyer; cockerel 1-3 W. M. Yds., 2 A. J. Fell, 4 H. W. Farnsworth; pullet 1 Havemeyer, 2 W. M. Yds., 3 Fell, 4 Farnsworth; pen 1-2 Havemeyer, 3 London Yds., 4 A. & B. Quackenbush.

PARTRIDGE WYANDOTTES—Pullet 1, pen 1 Althea Farm.

S. C. BUFF ORPINGTONS—All to Worthington P. Yds.

S. C. W. ORPINGTONS—All to Glenbreeken Farm.

R. C. BLACK ORPINGTONS—Cock, hen, cockerel 1 F. C. Fero.

S. C. BLACK ORPINGTONS—Cockerel 1, pullet 1 Worthington Yds.

S. C. BROWN LEGHORNS—All to Makowsky except hen 1, pullet 1 C. S. Cook, Jr.

R. C. BROWN LEGHORNS—All to C. H. Clark.

S. C. W. LEGHORNS—Cock 1 West Mountain Yds.; hen 1 W. M. Yds., 2 A. & B. Quackenbush, 3-4 Rellom Farm; cockerel 1 W. M. Yds., 2 H. St. J. Morehouse, 3 Rellom Farm, 4 Quackenbush; pullet 1 W. M. Yds., 2-4 Rellom, 3 Morehouse; pen 1 Quackenbush, 2 C. E. Morgan.

R. C. BUFF LEGHORNS—Cockerel 1, pullet 1-2 J. A. Schanz.

S. C. B. MINORCAS—Cock 1 E. S. Van Winckel; cockerel 2 Schanz; pen 1 Mathew Son.

R. C. B. MINORCAS—Cockerel 1 Schanz.

ANDALUSIANS—All to Arthur P. Hatch.

ANCONAS—All to Fred Dunlop.

PL. GOLDEN POLISH, W. CRESTED POLISH—All to Glenbreekin Farm.

HOUDANS—All to F. Gallatin, Jr.

A. O. V. PIT GAMES—Cock 1, hen 1 Wm. O'Neil.

BLACK OR B. R. PIT GAMES—All to B. L. Sackett.

INDIAN GAMES—Cock 1, hen 1 Worthington Yds.

BLACK RED GAMES—Cock 3 Nelson Upright.

BUFF COCHIN BANTAMS—Cock 1-2 Harry E. Smith, 3 Jacob Enright; hen 1-2 Smith, 3 Enright; cockerel 1-4 Jas. B. N. Fitch, 2-3 Smith; pullet 1-3 Smith, 2 Fitch, 3 F. Gallatin, Jr.; pen 1-2 Bogart Bros.

BLACK COCHIN BANTAMS—Cock 1, hen 1 Geo. W. Anderson; cock 2, cockerel 1, pullet F. C. Fero.

WHITE COCHIN BANTAMS—Hen 2 Arthur Skelton, 3 Anderson.

GOLDEN SEBRIGHTS, SILVER SEBRIGHTS—Cock 1, hen 1 A. L. Clark.

B. B. R. GAME BANTAMS—All to J. Hart Welch.

LT. BRAHMA BANTAMS—Cock 1, cockerel 1, pullet 1 Welch.

MALLARD DUCKS—Old drake 1 F. Gallatin, Jr., 2-3 Glenbreekin Farm; duck 1 Gallatin, 2-3 Glenbreekin; young drake and duck 1 Gallatin.

WHITE CALL DUCKS—To Glenbreekin Farm.

COLORED MUSCOVY DUCKS—All to Glenbreekin.

WHITE MUSCOVY—All to Glenbreekin.

PEKIN DUCKS—Old drake 1, young duck 1 H. Morehouse; young drake 1-2, young duck 2-3 E. Holbrook.

ROUEN DUCKS—All firsts to A. & B. Quackenbush, 2-3 to B. L. Sackett.

INDIAN RUNNER DUCKS—All to Glenbreekin Farm.

AFRICAN GEESE—Gander 1 Glenbreekin, 2 Althea; goose 1 Glenbreekin.

WHITE CHINA GEESE—Gander 1 Glenbreekin.

EMBDEN GEESE—All to Glenbreekin.

WILD CANADA GEESE—Gander 1 W. E. Smith, 2-3 Glenbreekin; goose 1-3 Smith, 2-4 Glenbreekin.

PHEASANTS—All to F. Gallatin, Jr., except hens 1 English Ring Neck, cock 1 Golden, to G. S. Raymond.

FLYING HOMERS, BLUE OR SILVER—Cock 1 Wadan Knoll, 2 P. Walker and 2-3-4 P. W. Konitshek; hen 1 Wadan Knoll, 2 Konitshek. Red or Red Chequer—Cock 1-2-3 Konitshek, 3 W. Knoll; hen 1-2-3 Konitshek. Blue or Black Chequer—Cock 1-2-4 Konitshek, 3 W. Knoll.

WHITE FANTAILS—Cock 1 Harry Sarsfield, 2 Wm. E. Butler, 3-4 P. G. Howes; hen 1 Butler, 2 Sarsfield, 3-4 Howes. Red or Yellow—Cock 1 Sarsfield, 2-3-4 Butler; hen 1 Butler, 2 Sarsfield, 3-4 Howes. Black—All to Howes. Blue or Silver—All to Butler.

SWALLOWS—Cock 1 Howes.

JACOBINS—Red or Yellow, all to Althea Farm except cock 3 Howes. White—All to Althea Farm.

BLACK PIED POUTERS—Cock 1, hen 1 Konitshek.

LIMBER NECK.

I read with interest your article on limber neck in the July Poultryman. You spoke of buying two beef heads per week, allowing them to get full of maggots and then let the chickens eat them. Well, I am a Tennessee woman and have raised fancy poultry thirteen years, and I would just like to see you do anything like that here. There was a time, however, when limber neck was not known to the chicken raisers, because I remember the first cases I ever saw. About twenty years ago my mother sent me to feed the chickens and two of her finest pullets were lying on the ground with their necks all stretched out; of course we thought something had hurt them; but investigation proved that about twenty were affected the same way. We put them in an old outhouse and I had it for my job to doctor them. Well, I gave them everything I could think of from molasses to turpentine, from kerosene to carbolic acid. I cured some, but killed more than I cured by giving too much turpentine. Possibly you do not have the fly in Texas that lays the same maggot egg that we have here. Since I have been a housekeeper I never allow anything to be thrown out that will get full of maggots. Always burn all the waste when dressing fowls for the table and burn or bury all dead chickens, being sure that I bury them deep enough, too, and still I have a few cases of limber neck by the chickens getting off in the weeds and dying and not being found. I have known my neighbors to lose entire flocks of turkeys by them eating maggots from the carcass of a horse or some other animal. Now, if you don't believe this is true you just come to Tennessee and try raising poultry for one year. When I see one of my chickens looking the least bit sick I put it off from the rest and watch it till I can diagnose its case and then I commence on it. I can cure the limber neck when the chicken is so near dead you can scarcely see it move, and I will give you my prescription: One-half glass of water, 16 drops carbolic acid; give four or five teaspoonsful morning and evening; the chicken will become very sick and throw up; but be sure you get plenty down it and give it a little sweet milk to keep its stomach till it can eat. Usually in about three days the chicken will be all right.—Mrs. Hugh A. English in Southern Poultryman.

IT HURT THE BLACK MINORCA.

Scarcely two years have elapsed since the American Poultry Association, through the influence of a few members of the S. C. Black Minorca Club, who were far from representative, raised the standard of weight for Black Minorcas. Already it is evident that this change was a great mistake.

The raising of the weights of Minorcas goes beyond the limits within which the best form of this breed may be maintained, and casts aside the best qualities for the overgrown bird. The male is coarse in every section, ungainly, stilty, and clumsy. This has much to do with the infertility of eggs. The female is losing her typical form, is coarse, clumsy, and inactive, laying smaller eggs and less of them, and has more of a tendency to become broody. All this has been brought about as the result of efforts to attain the largest size.

Every breeder of this grand bird knows full well that it is the medium sized, active bird that lays big eggs, and plenty of them.

A movement to have the Standard weights restored to the original weights—cock 8 lbs., hen 6½ lbs., cockerel 6½ lbs., pullet 5½ lbs.,—is sweeping over the United States and Canada. A petition to the A. P. A. requesting that these weights be restored, and that, other things being equal, the bird nearest Standard weight shall win, is being prepared.

Every breeder in favor of this petition is asked to send his name and address to the undersigned.

GEO. H. DEXTER, in Farm Poultry.
County Park, Everett, Mass.

THE AMERICAN FANCIER

A Weekly Journal Devoted to Poultry, Pigeons and Standardbred Stock.

Entered as second class mail matter at the Post Office at Johnstown, N. Y.

J. H. DREVENSTEDT.....Editor

H. M. POCKMAN..... Managing Editor

SUBSCRIPTIONS.

Subscription, $1.00 per year.
Foreign subscription, $1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE

All matter, advertising or otherwise, must reach The American Fancier, Johnstown, N. Y., or 26 Cortlandt Street, New York City, not later than Monday afternoon of the week in which the same is to appear.

ADVERTISERS.

The advertising rate in The American Fancier is one dollar an inch for a single insertion. Rate card giving prices and discounts on quarterly, half yearly and yearly contracts sent on application.

CLASSIFIED AD RATES.

Forty-two words or less one time, fifty cents; three times, $1.00; thirteen times, $4.00; twenty-six times, $6.00; fifty-two times, $12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

ISSUED BY THE AMERICAN FANCIER PRINTING & PUBLISHING CO.
EVERY WEDNESDAY.

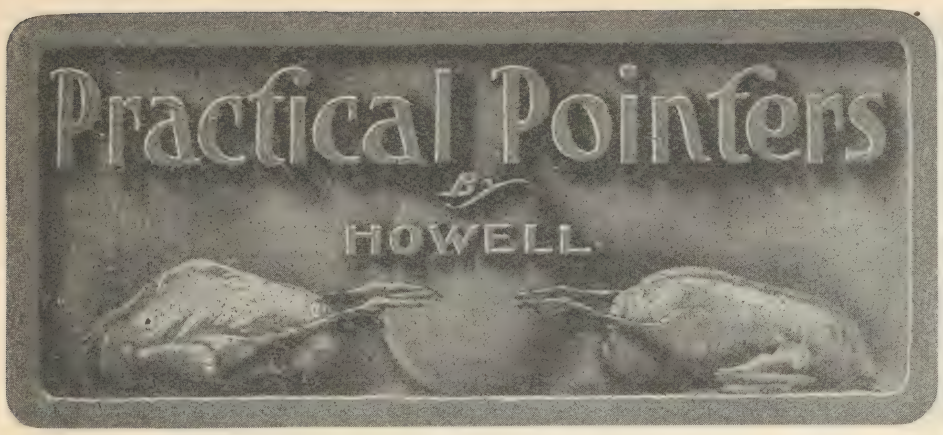
Publication Office,
North Market St., Johnstown, N. Y.

Editorial Office,
Havemeyer Building, 26 Cortlandt St.,
New York City.
Telephone 6252 Cortlandt.

We will send the American Fancier, price $1.00 per year; Poultry, $1.00 per year, and Pigeons, $1.00, for $2.00 the three papers for one year.

* * *

There are three reasons why you should advertise in The American Fancier.



First. It reaches directly the superior buying class, a selection from the masses of people who are able to gratify their wishes and who are the greatest consumers.

Second—Your ad. will make its appeal when its readers are relaxed from their daily cares and in a receptive mood, the best time to obtain a hearing.

Third. The American Fancier is a weekly, thus making quick sales, it is not only a magazine, but a newspaper containing all the real live news of the poultry and pigeon world. Thousands of testimonials from the best breeders in America. The largest circulation among the buying class.

QUICK WORK.

As the result of the card placed in the American Fancier, I sold all my birds to Dr. S. J. Fairbanks of Utica, N. Y. Rather quick returns from the first insertion, is it not? FRANK CHAPIN.
Oneida, N. Y., Oct. 31, 1906.

Following each spell of extreme cold weather, will come a few days more moderate in temperature. These have their advantages and disadvantages. One thing the health of the fowls demand, is that the boards under the roosts be cleaned and dusted with some absorbent after each thaw.

Lime is one of the cheapest and best absorbents, and should be kept constantly on hand.

Dampness will appear to menace the good health of the flock also.

The only thing to do, is to open the windows when the thermometer rises, and close them when it runs down. If the change occurs during the night, hustle out the first thing in the morning.

It sometimes happens when the pullets commence laying, they neglect to have a nest picked out and drop them around most anywhere. This is a most productive source leading to egg eating, an egg gets broken and the trouble commences. The habit is formed and will be hard to break up. For this reason is pays to have the nests prepared and eggs gathered often.

Hens never did better and had so little care, is the way one party expresses his operations. What a lot of satisfaction it must be, and how consoling to us fellows who have been dealing out attention by the bushel and bringing in the eggs by the handful.

When a hen just will not lay, I do not think all the forcing food in America will set her going.

There is no denying a hen will, like all other stock about the farm, respond to good care and treatment, if not immediately, then later on she will be doubly prolific. In other words she may be able to fulfill all obligations expected of her, but she will not be hurried.

The fanciers in the lower end of this county and along the Hudson River, will hold a show at Walden, N. Y., Christmas week. C. A. Dawson, Walden, N. Y., is secretary.

The old timers do not take kindly to new shades and markings. Take the Barred Rocks, for instance. Every once in a while we come across a bird which is a compromise between the type of the present day, and of the early period of their career.

Now there never was any beauty in the breed when a brown black was the color of the barring, since the art of the Fancier has changed the bars to blue black and brought the color of the male and female to a more uniform degree, the breed is one of the most handsome we have, but you let one of the old boys get his eye on a light colored male, and he will pronounce it a great bird to breed from.

It will not do to delay in preparing birds for a show. White birds especially must be washed, but this must be done several days and not one before the shipping to the show, the feathers must have time to accumulate the glossy appearance so necessary in a show specimen, if expected to win. The chances are the bird next day will look worse than before it was washed. A couple of days in a coop well littered with nice clean straw, will change all this.

It is an art to prepare for an exhibition, and the exhibitor bringing his birds in the pink of condition deserves great credit, win or lose.

COMPARISON JUDGING THE BEST.

Mr. G. M. Kuebel in a most interesting article on Judging Poultry, which appears in the November issue of the Southern Poultryman, winds up by making the following statements regarding comparison judging:

"If I had the time and space I would take up other drawings where the type is not alike. My point is this, that a poultry judge can not always go by the ideal drawings. He must know the characteristics of the different birds and keep the typical bird always foremost in his mind when judging. Therefore, I say that typical shape receives more consideration in comparison judging. Every breeder that knows his breed can go among his flock and find out his best bird in a few minutes, that he intends to enter in a poultry show. He does not have to score them when he makes his prices. His eye and judgment are better than a score card. In the same way the birds are selected at a comparison show. The judge can go over one class as many times as he likes. One time a bird may not stand right. If he is a bird of merit the judges will keep an eye on him and go to his coop several times and note any change of body or tail, etc. I have made changes in my awards when judging by comparison before I made my report to the secretary. May be caught the bird standing at ease, he may have had second place before and now on account of his shape, other things being equal, he is given first honors. The judge goes over the entire class of worthy birds and examines them for shape and color. He then picks the the best of them, has them brought together and compares them both in shape and color and selects the winners from among them. This can't be done under the score card system. After the birds in a certain class are scored the judge may notice a cockerel grand in shape and color. He looks like an easy winner, but upon examining the cards he may find the bird not placed at all. If he were to attempt to change the cards he would have a row on his hands. The other fellow's birds that were not placed would claim consideration and the ones whose birds had scored the highest would make a kick.

So in the interest of harmony the judge will very likely let things stand, yet I think the judge has the right before he signs the cards to give a bird justice, if he sees that the birds have not been given a square deal. A score card, as to shape, is only a record of the bird the minute he was judged. Last year after the ribbons were up a breeder showed me a score card on a White Wyandotte cock. I had cut him all to pieces on shape. He took me to the coop and he was about as good a shaped bird as I have seen. He told me that I had scored him right at the time he was scored. After he had been brought to me to be scored he would try and get his tail between his legs, his back was about as straight as a board, his breast all drawn up, neck turned in. He informed me that I worked with him several minutes, even put him on the floor, but all to no use. I remembered the bird and he was about as poor a shaped thing as I ever saw when I scored him, yet this bird was hacked at the time and did not get a square deal, through no fault of mine. In a comparison show he may have had a chance at the ribbons. A prize won at Madison Square Garden is worth more than a prize won at any other show in America. The Madison Square Garden show is always judged by comparison. A bird winning a first prize at Madison Square Garden will sell for more money than a bird winning a prize at any score card show in America. Some of our largest Southern shows are being judged by comparison and I think that it will only be a matter of a few years until all of the leading shows in the South will be judged by comparison.

I ask the thoughtful consideration of all true lovers of Standard bred fowls on what I have said."

STATE SILVER CUP.

The American Buff Plymouth Rock Club will offer State Silver Cup at Auburn, N. Y., for best cock, hen, cockerel, pullet and pen. As a result of the vote of the New York state members of the American Buff Plymouth Rock Club, the state silver cup will be offered at Auburn, N. Y., at their annual show, to be held Jan. 7-12, 1907, the same to be awarded for best cock, hen, cockerel, pullet and pen (young pen).

A state meeting will be held during the show, quite probably in connection with a supper at the Osborne House, for the purpose of electing a state vice-president for the ensuing year and the discussion of all matters pertaining to the club and the welfare of the variety. We ask every member of the club, as far as possible, to be present, especially New York state members, as well as all interested in the variety. Every breeder not a member of the club is urgently requested to send in his application at once to the secretary, C. A. Morton, 510 Chamber of Commerce, St. Louis, Mo., so that he may be eligible to compete for the silver cup.

It is the desire to make our meeting a general rallying point of Buff Plymouth Rock fanciers and to stimulate old bolod and create new enthusiasm, which will place our variety as well as our club work still farther in advance of our competitors.

D. M. GREEN,
State Vice-President.
620 S. Warren St., Syracuse, N. Y.

GREIDER'S SUPERB CATALOGUE

of high bred Poultry for 1907 is larger and better than ever. Printed in beautiful colors, with 10 striking Natural Color Plates of leading breeds. Illustrates and describes Sixty Varieties Poultry, Pigeons, Ducks and Geese.

Tells all about practical poultry houses and equipment, how to build them, how to cure diseases, make hens lay and yield good profits. PRIESTS—All to Carroll.

BLACK SHOW HOMERS—All to Carroll.

BLUE CHECKED HOMERS, RED AND BLACK WORKING HOMERS—All to Morlock & Hotaling.

A HARD WINTER COMING.

(From the Washington Post.)

Prophets in various sections of the country are foretelling a long, hard winter, beginning immediately after Thanksgiving. The signs, they say, are all pointing in one direction. In Pennsylvania it has been noticed that muskrats have begun building early; that cornhusks are thick, with the stalks leaning to the west; that geese, ducks and chickens are growing a thick down under their feathers and a bony substance on their feet; that squirrels have laid up unusual supplies of provender; that toadstools on old logs have many wrinkles; that owls have retired to the forest a month earlier than usual, and that the chin whiskers of farmers are growing faster than was ever known before. As a clincher, it is reported from Lancaster county that many farmers have developed a bony substance on their feet similar to that which has equipped other domestic fowl for a tough winter.

From New Orleans comes the alarming news that two distinct curls are seen in the tail of the 'possum, and that "on moonlight nights rabbits are heard drumming on hollow logs with their hind feet and spitting the juice of mullein weed between their teeth." In West Virginia several serious affrays are reported between moonshiners and rabbits, which are remarkably bold in their forays upon mountain stills. From Western Kansas there has been a migration of prairie dogs into the Oklahoma country. Salmon have left all the Pacific coast rivers for the deep ocean. The weather sharp of the Los Angeles Times reports that "horned toads may be heard gnashing their teeth in the treetops, and black cats are looking white under the eyes and are staying out nights later than usual."

GUARANTEED BEST HATCHER.

Greystone's Black Minorcas and White Rocks

made a sweeping win at Madison Sq. Garden, 1905, 8 1sts out of a possible 10, a record never equaled at the Garden. Grand Central Palace, 7 1sts and 5ds. Rochester. 1904, 4 1sts and 9 regular and specials on Rocks alone. Boston, 1906, Gold special, largest win on both varieties and 20 regular and specials and cup.

Breeders and show birds of the highest quality for sale.

GREYSTONE POULTRY FARM, - - - - YONKERS, N. Y.

F. H. DAVEY, Manager.

In this issue we reproduce a few photos from life of Helmets and Hollanders, owned by Mr. A. E. Robst. Two varieties more striking in appearance cannot be found. In formation they both resemble the Tumbler family. The article in other columns by Mr. Krueger gives a most excellent description of these varieties.

The collections at the Rutherford Show were of a very high quality, especially the crested Helmets and plain Hollanders. There being quite a number of fanciers of these varieties in and about the Eastern States, we should like to see a specialty club formed and competition increased. Now, breeders of Helmets and Hollanders, try and get together and see what can be done at New York during the show.

* * * *

The entries in the pigeon section at Madison Square Garden is considerable above former years, over 1,800 entries, we believe, at $1 per bird. Dragoons brought out an entry of 280, which is the largest collection of this variety ever shown in America; 207 Pigmy Pouters in the open classes; 148 Fantails; 77 Magpies; 41 Pouters. Jacobins a large entry, the exact number we have not heard. This speaks well for the fancy and in a few years the Crystal Palace of the world will be Madison Square Garden.

* * * *

Forty-one Pouters at a club show at Madison Square Garden shows a decidedly wrong state of affairs among the Pouter fanciers. For a club with a member list like the Pouter club, it should be ashamed to offer the few specials at its annual club meeting as are published in the premium list. Just a few years past this section was most prominent, a grand list of specials and plenty of competition. The Pigmies have taken their place and have shown up remarkably strong, owing to a hustling lot of members and a like secretary.

* * * *

Second annual show of the Cleveland Fanciers' Club will be held at Gray's armory January 14-19, 1907, Cleveland, Ohio. The entry fee in the pigeon department will be $.50 per bird, with prize money of $2.00 first and $1.00 second. The classification caters to all varieties, numerous specials, including several silver cups, are offered. L. A. Jansen and Chas. E. Lang will judge the pigeon classes. Entries close Jan. 7. The entire exhibit will be penned by the Empire Cooping Co., which will make the exhibition most attractive. For premium list address Sec'y E. L. Gruehl, 9902 Woodland Ave., S. E., Cleveland, Ohio.

* * * *

Rutherford, N. J., show offered in the pigeon section quite a few specials. The silver medal for the best Fantail in the show was won by N. M. Shaw of Jersey City, N. J., with a young hen fit for most any competition; small, elegant shape, short legs, plenty of style and action, shown in first-class condition.

Silver cup for the best collection of Helmets was captured by Mr. Robst's grand collection.

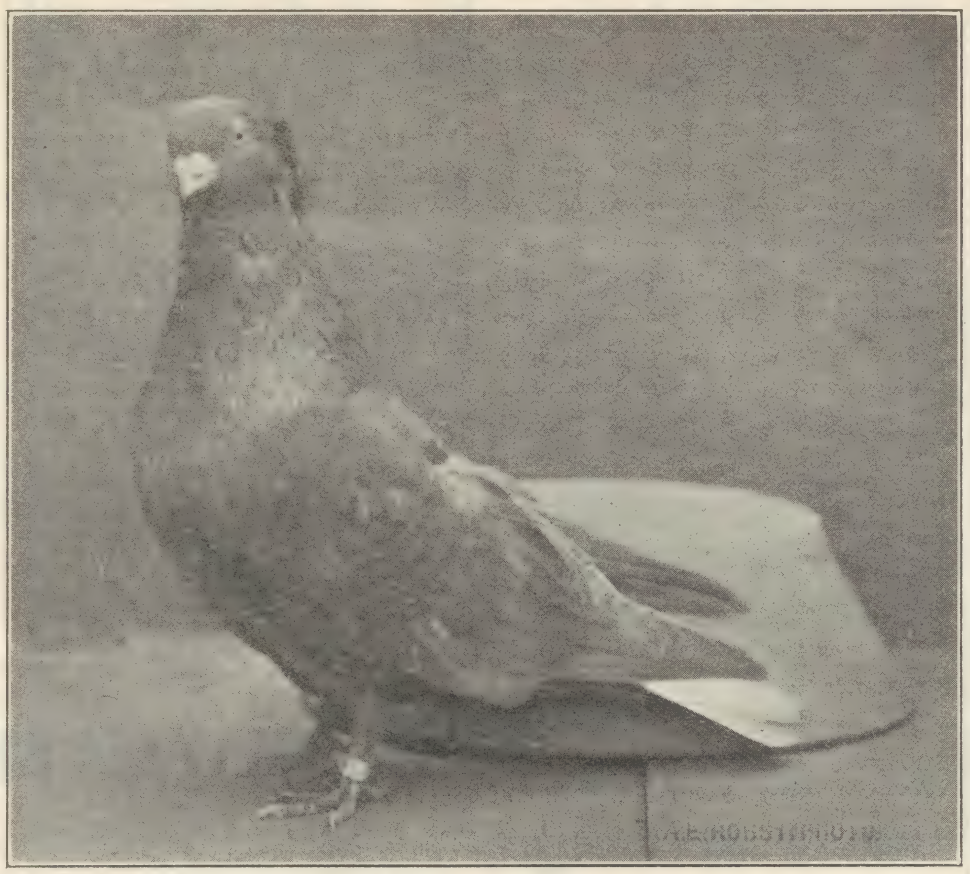
The cup for the best display of Homers was won by the Passaic City Squab and Pigeon Co. with a grand collection. This concern won five firsts in the open classes with birds that can stand competition of our larger shows.

Mr. Leo Levy showed a grand team, winning five firsts on seven entries in good competition. His blue cock, winner of first in Blue or Silver class, was one of the best Homers we have yet seen this season, and we believe will be exhibited at both New York and Boston.

HELMETS AND HOLLANDERS.

Written Especially for the American Fancier by C. Krueger.

Have read The American Fancier of Oct. 20th, relative to Helmets and Hollanders, and as an old breeder of these varieties I believe I am entitled to say a few words. Have bred both varieties for about 40 years, both here and abroad. I would be pleased to learn who named these varieties, as they originated in Hamburg and vicinity. Those called Helmets are called "Callotten," and Hollanders are named "Stickschlage," and of the latter variety there really are none with crests.



The Helmet is greatly appreciated in Hamburg. Some breeders have bred them for over forty years there. They are a toy pigeon and have been gradually bred to resemble the Tumbler, the best now commanding a price of $.75 per pair and over and hard to get good at that figure. They are bred both plain and crested in yellow, blue, red and black, to which has been recently added a clay colored bird by crossing light blue and yellow, a very delicate coloring. The eyes should be white and the marking very correct (no spectacles) no colored feathers under the eyes, clear color in cap to crest, the crest itself white and rounded on top. A really good marked bird with all the above conditions is valuable and entitled to a special premium. The tail should contain 12 feathers, though I have seen them with as many as 15.

Regarding Hollanders (Stickschlage) this variety is also largely bred around Hamburg, in red, yellow, blue, dun and black; the latter are still very scarce and consequently costly. They should have a good even solid color from the head to the tail, a small white bill and full crest lying close to the head, the tail at least 12 white feathers and cut as high as possible with no white above the vent, white eyes.

Probably the reader will question why the writer has not exhibited such good and valuable birds at the shows? As an old pigeon crank, I will answer that till some two years ago I had the best Helmets and Hollanders in this country and brought as many of the best as I could find from Europe in the winter of 1904, visiting various lofts and shows at the time to obtain them. I have visited Madison Square shows for a great number of years and found that in most cases the judging for Helmets and others was guess work. I believe that a judge who does his work thoroughly should handle the birds. In most cases the awards were made by simply looking at the birds through the cage. Some of the judges did not even know the name of the birds and the reader will agree that as an old fancier and judge myself I could not exhibit under such conditions. Unfortunately my occupation has made it necessary for me to make my present home on the Pacific Coast. I have already spent considerable time here to locate good fancy birds, but have been unsuccessful. However, if anyone wishes to see real good Helmets and Hollanders, or Callotten and Stickschlage, as I call them, he should visit Mr. Robst of Rutherford, N. J. He has my entire stud brought up to date during the last 40 years by my father and myself and I am pleased to say that I have met in him a fancier of this variety of whom I am truly proud.

With a fancier's best wishes I am, yours truly.

Signed, C. KRUEGER.
2545 17th Street, San Francisco, Ca.

Owned by A. E. Robst.

CRYSTAL PALACE AWARDS.

BARBS (judge, Mr. F. Frith).—Five classes were provided, the entries averaging seven per class. Bred Prior to '05—Cock (10): 1, trophy, Edwards, the Barnstaple, etc., winning red, beautiful type, wins easily, undoubtedly the best adult cock out; 2, Horsfall, well-known old black, shown in grand condition, fails in formation of beak wattle, but deserves his place in present company; 3, Horsfall, a real good black, for Barb type equal to anything in the class, but requires a little more time to develop; r, Whidbourne, red, massive beak wattle, but with very soft and drooping eye ceres, not at all the type of bird wanted; vhc, Edwards; hc, Barney; after the winners, a very moderate class indeed. Ditto—Hen (5): 1, 2, 3, Edwards, an excellent team of two blacks and a red, the second black should have won but for condition of feather and eye, where she was sadly lacking; vhc, Saunders; pen No. 6568, wrong class: Mr. Whidbourne's yearling hen was penned in this class, and the adult hen, which might have been in the money in the '05 class. Bred '05—Cock (8), a very strong class indeed, several birds worthy of better things having to be content with commended cards: 1, Whidbourne, a clinking red, massive skull, beautiful eye and frontal, shown in the best of condition. wins well; 2, 3, Edwards, two very stout reds, little to choose between them, a little longer in face than winner, but has room for development, and as adults will not present that cramped appearance between eye and beak wattle which the shorter-faced birds do; vhc, Saunders, Whidbourne; hc, Charnley, Saunders. Ditto—Hen (4): 1, Whidbourne, red, beautiful cobby type, good eye, skull and frontal; 2, Saunders, very similar red, but fails in substance of beak and texture of beak wattle; empty, Whidbourne; pen 6582, Whidbourne, wrong class. Bred '06: 1, Edwards, big-skulled red, beautiful eye, beak and beak wattle, the only fault bad color, which is of a very dull shade, almost a dun; 2, Edwards, good-colored black, of similar type to winner, but fails in formation of beak wattle, and is rather longer in feather; 3, Whidbourne, very stout red, a shade unequal in beak wattle, and runs a trifle rusty on tail; vhc, Edwards; vhc, hc [2] Whidbourne.

TURBITS (judge, Mr. Houghton) numbered 325 pens. Mr. Dean's blue cock won the special for the best adult cock, and Mr. Champness's blue hen won the like special in the hens. There never has been such level quality throughout the show, and in many of the classes there was very little between the winners. CHAMPION, Black, Blue or Silver—Cock (1): 1, Dean, "Punch,' oft described, all there in head points, but getting a bit weak in beak now. Hen (1): 1, Stephenson, the first Palace, 1905, and also first at Dairy, Altrincham, etc., a beauty, probably the best black hen living. A. O. C.—Cock (2): 1, Champness, the well-known dun, just ahead of 2, Scatliff, the equally well-known dun. Hen (2): 1, Stephenson, one of, if not the, best dun hens in the Fancy. BLACK—Cock (13): 1, Widger, the full-nosed Altrincham and Manchester special winner, low in peak and not in best of form; 2, Sherwin, lovely beak and head, splendid profit, but just a shade too much wattle, and rather too long in neck; 3, Dean, a long way behind, too coarse in cere and wattle, and badly bishoped; r, Holmes, vhc, Santall, Dean, Collingbourne; hc, Brannam. Hen (14): 1, Dean, just a pretty little hen, inclined to be narrow, but nice frontal and finish; 2, Brownbill, we almost preferred, having a longer head and better profile; 3, Cotton, the 1904 challenge cup winner, we think might have won without injustice to the others, she certainly has the best beak; r, Dean; vhc, Webster, Widger, Cotton; hc, Brannam, Webster, Collingbourne, Lewis. BLUE or SILVER—Cock (13): 1, Kell, the Dairy winner, the winner here in the young class last year, looking better than at the Dairy, win all right; 2, Champness, the Altrinchan. and Manchester winner, loses fullness of frontal, lovely profile and finish; 3, Santall, the Dairy reserve, in fresh hands, a wonder so far as front goes, a bit ticked in color, puts him behind the others; r, Brannam; vhc, Champness, Scatliff [2], Widger; hc, Champness, Cotton. Hen (11): 1, 2, Champness, the second Altrincham and Manchester blue hen, bit shelling in peak, but carries a lovely beak, and is clear in color, second silver, the winner here last year, in fresh hands, third same, not so massive in head, but extra nice color and type; r, Widger; vhc, Champness; hc, Lobb, Scatliff, Cotton; c, Cotton. RED—Cock (6): 1, Stephenson, extra good 1905 bird, certainly one of the

best red cocks, extra sound in color, with nice beak, frontal and finish; 2, 3, Stent, good color, about his only recommendation, bad beak and out of condition, a mistake, third Dairy and Altrincham winner, an easy second, very "modern" in type, lovely color, not the best of carriage; r, Holmes; vhc, Plimpton. Hen (8): 1, 2, Stent, extra sound rich red, well marked, nice sweep, beak and finish but badly shown, second even better in color, wider in skull, but fails in beak; 3, Scatff, extra good beak and frontal, modern type, but loses to the other two in color; r, Dale; vhc, Champness, Dale, Scatliff. YELLOW—Cock (8): 1, Champness, nice beak and beak setting, but fails a bit in color and peak; 2, Duff, very much sounder color, and better finished, but loses to winner in beak and frontal; 3, Hoyle, rich color, but chequery, glad to see this old fancier "in the money" once more; r, Tolman; vhc, Fielding; hc, Flewelling. Hen (12): 1, Duff, the third Dairy, extra good type and color, stout beak; 2, Stephenson, the Altrincham winner, some preferred, but just loses in type; 3, Craven, fails in beak to the other two, and a bit out in peak; r, Fielding; vhc, Price; hc, Duff, Stent. DUN, DUN CHEQUER, or BARRED DUN—Cock (9): 1, Scatliff, a wonderfully full frontal, good stout well-set beak, splendidly finished and shown; 2, Scatliff, a wider skull and lovely frontal and beak, quite as good, loses only by condition; 3, Parkin, a good-nosed one, but not the beak setting of the other two, but a good one all through; r, Cotton, much too coarse and low in peak; vhc, Leech; hc, Martin. Hen (9): 1, Stephenson, good-headed 1904 ring, bit coarse and red in eye cere, and not the best of fronts; 2, Kell, better front and excellent beak, but looks seedy , might have given place to 3, Scatliff, a lovely-fronted bird, second in young class here last year; r, Sherwin, very nice, spoilt by a twisted peak and no gullet; vhc, Brannam, Scatliff. A. O. C.—Cock (8): 1, Champness, the Altrincham winning strawberry, extra bold front, nice and cobby; 2, Leech, same color and type, but showing age a bit; 3, Champness, the Altrincham second, best sweep in class, but carries himself badly; r, Potts, one of the old-fashioned type, and loses in beak-setting; vhc, Champness; hc, Cotton. Hen (5). 1, Parkin, well-known cream, good front and finish, but not the best of beaks; 2, Leech, black chequer, with extra good front, under-flighted, which puts her back; 3, Duff, pale strawberry, good head, but really should have been in the Stock class, as heavily bishoped one side. BRED '06, Black—Cock (13): 1, Widger, splendidly-finished frontal and beak, good peak, one of the first water; 2, Leech, a good one, too, but considerably behind winner; 3, Dean, a bit hollow and overshot on beak, and one we did not care for; unnoticed, 7197, Champness, one of the very best in class, and we think might easily have been third, if not second; r, Champness, just a nice pigeon, that's all; vhc, Dean, Kell, Widger, Scatliff; hc, Collingbourne, Chapple, Scatliff; a grand class for quality. Hen (15): 1, chal. cup, sp. best '06 hen, sp. best black or blue hen bred '06, Widger, a rather cocky-looking hen, nice color,grand front, beak and beak-setting, small and well finished, deserves her position; 2, Lewis, a lovely-fronted hen, but wants a bit of time to make up, wins her position nicely; 3, Dean, rather narrow in front, and a bit out in peak; r, Fovargue; vhc, Dean, Hoyle, Scatliff, Collingbourne; hc, Cotton, Fovargue. Blue or Silver—Cock (8): 1, chal. cup, sp. for best cock bred '06, sp. best black or blue cock bred '06, Scatliff, a wonderfully full nosed small blue, perfectly clear in color, and short in feather, and extra good beak, wins well; 2, Scatliff, an equally good blue, except in color and markings, very like the winner; 3, Jones, nice-nosed blue, but fails somewhat in beak, and longer in feather, and bad bars; r, Brownbill; vhc, Scatliff, Brownbill; hc, Kell. Hen (13): 1, Champness, sweet little blue, looks like the special winner at Altrincham, extra full front, a littly bumpy in skull; 2, Champness, much stouter in beak, fuller in nose, we prefer; 3, Widger, nice front and down-face, fails to the other two in beak; r, Santall, big-headed hen, loses in color; vhc [2], Scatliff, two first-rate hens, one the Dairy winner; hc, Lobb and Scatliff; grand class for quality. Red—Cock (12): 1, sp. best red or yellow cock, Stent, extra good color and front, fails in under mandible; 2, Tolman, much longer in face and lacks style of winner; 3, Parkin, nice front and profile, again fails type; r, Stephenson, open in beak, and a bit off in color; vhc, Tolman; hc, Leech, Stretch. Hen (7): 1, Stephenson, the Dairy winner, very typical, wants a little gullet to make a wonder; 2, Tolman, nice hen, but considerably behind the winner; 3, Parkin, good color and markings, but loses in beak; r, Dale, a long way behind; vhc, Leech; hc, Wright. Yellow—Cock (8): 1, Fielding, rather narrow in skull, and a bit out of profile; 2, Holmes, one of the old-fashioned type, and not the best of colors; 3, Duff, the best color in the class, but distinctly out of profile; r, Parkin; vhc, Price, Wright. Hen (11): 1, sp., 2, 3, r, vhc, Tolman, five of the best yellow hens we have seen for some time; hc, Duff. Dun, Dun Chequer, or Barred Dun—Cock (2): 1, sp., Widger, 2, Scatliff, two birds as like as two peas, excepting the winner is a little more forward. Hen (12): 1, sp., Lobb, a sweet-headed hen, with extra good front and beak, will be heard of again; 2, Potts, rather a weak face, and distinctly fails in beak, we prefer 3, Scatliff, the Dairy second hen, but which is a little off color to-day; r, Cotton, extra nice front, and might have been third; vhc, Stephenson; hc, Cotton. A. O. C.—Cock (9): 1, Tolman, big-headed lavender, with a correct front and beak setting; 2, Stephenson, a chubby-headed strawberry, rather long in feather; 3, Scatliff, a good-nosed lavender, in his nest feathers; r, Newby, a good-headed strawberry, with open beak; vhc, Scatliff, Parkin, two massive beaks; hc, Duff. Hen (9): 1, Scatliff, a sweet-headed strawberry, very full front, and extra stout beak; 2, Stent, same color, but lacks style of winner; 3, Parkin, big-headed cream, but fails in frontal to the other two; r, Duff; vhc, Tolman, Plimpton. STOCK—Cock (14): 1, Champness, extra massive-headed bishoped black; 2, Santall, with his beautiful ticked blue; 3, Champness, ticked blue, the winner at Altrincham in the stock class; r, Leech; vhc, Cotton, Brannam; hc, Scatliff, Mizzlewhite, Stent. Hen (12): 1, Champness, a blue, good front, but a bit hollow in beak; 2, Fovargue, very full headed black, but not quite the modern type; 3, Cotton, a lovely little black, rather high in frontal, otherwise very good; r, Scatliff, very stylish silver, beautifully finished, but lacks substance of winner; vhc, Champness; hc, Plimpton. Bred '06—Cock (10): 1, Dean, black, very stout beak, nicely set, good eye; 2, Widger, black, nicely filled in front, splashed face; r, Widger; vhc, Scatliff [2], both extra stout; hc, Sherwin. Hen (16): 1, Plimpton, the Altrincham second, in same class, very massive skull, one white wing; 2, Champness, stout-headed blue, but a little lacking in style; 3, Leech, big-headed, foul-tailed blue; r, Widger; vhc, Champness, Cunningham; hc, Ross, Champness. SELLING, 3 pounds, 3 shillings—Cock (13): 1, Scatliff, black, an easy winner, probably worth 10 pounds; 2, Holmes, another black, extra well finished, but a little old-fashioned in type; 3, Martin, an excellent headed ticked blue; r, Champness, full-nosed black; vhc, Scatliff, Stent; hc, Champness, Terry. Hen (9): 1, Stent, good-headed black; 2, Champness, black, with over-shot beak; 3, Widger, rather thin-faced blue; r, Hutton, stylish black; vhc, Martin; hc, Scatliff [2], Wickham. Bred '06—Cock (3): 1, Champness, rather coarse-headed blue; 2, 3, Scatliff, two typical blacks. Hen (4): 1, Scatliff, black; 2, Gibson, nice sweep, rather long in feather; 3, Champness, considerably behind; r, Scatliff. Stock, 5 pounds, 5 shillings, (8): 1, Stent, blacks, good cock, but poor hen; 2, Morgan, mistake, both fail in color; 3, Scatliff, blue and silver, which we understand, were quickly sold; r, Scatliff, blacks; vhc, Scatliff, a lavender and a black; hc, Potts, blacks; a very interesting class.

DRAGOONS (judges, Messrs. Schunck and Johnston)—The quality generally was quite equal to and the number in excess of previous years, 483 birds being penned in the thirty-eight classes scheduled. The judging was a somewhat protracted business, owing to the bad light consequent upon the elements without in the form of fog conspiring against any attempt to break record or even exceed the speed limit. Much interest was taken in the awarding of the gold cup, which coveted trophy was won by Mr. Ambrose's well-known silver chequer cock. A silver of the same sex, the property of Dr. Tattersall, deservedly secured the "Alex Wright Cup," the same gentleman also winning with his chequer cock the 1906 Challenge Cup. A yellow belonging to Mr. Stacey annexed that for the opposite sex. BLUE—Cock (18): 1, Ambrose, the Dairy winner, capital shape and substance of beak, good eye and color, finely-worked cere, looking very fit; 2, Wright, good skull and strength of beak, sound color, fairly good wattle formation, lacks the brilliance of iris of winner; 3, Tattersall, nice eye, stout beak, wide skull, getting coarse and pale in cere, with plenty of feather behind; 4, Grant, good eye and cere, just a shade pale in color, fully long in face and wants padding; r, Ambrose, first-rate stamp, stout and short, wants furnishing; hc, Wright, stout beak, straight face, a little heavy in cere, and his lamps want trimming (to avoid misunderstanding, dull in eye). Shaw, good eye, sound color, capital strength of beak, fails in wattle formation and finish of skull; Walker, short in feather, shade light in eye and cere, and weak in under mandible; Wright, fairly good eye, neat cere, good top skull, wattle badly put on; empty, Cunningham [2], Flangan. Hen (17): 1, G. and J. Smith, stout beak, short in face, little light in eye and pale in cere, not in the best of condition; 2, Tattersall, capital shape, fine hard cere, brilliant eye, well-formed wattle, nicely-wedged skull, presses winner hard; 3, Tattersall, first-rate substance of beak, finely-worked cere, bright eye, beaten in width of skull and not quite fit; 4, Gatty, fairly good skull and substance, quite long enough in face and feather; r, Gatty, stout beak, good eye, faulty in cere formation and again fully long; vhc, Mitchell, capital skull, stout well-set beak, fine damson cere, not the best of color; hc, Ambrose, plenty of substance, but not in show form; Falkner, straight and stout, faulty in wattle formation and too long drawn; Walker, good eye and quality of wattle, somewhat heavy in cere and pointed in beak. SILVER—Cock (10): 1, Tattersall, stout beak, good eye, fairly sound in color and bar, fine cere, somewhat coarse in wattle and narrow in skull; 2, Fletcher, scarcely so stout as winner and not so bright in eye, moderately even in color and weak in bar; 3, Tattersall, good eye and strength of beak, good top skull, fails in front and quality of wattle; 4, Grant, fair color and skull formation, beaten in color of iris and straightness of outlook; r, Tattersall, broad wedge skull, stout beak, faulty color and bar; hc, Grant, A1 substance, losing in color and quality; too late, Smith [2]; wrong class, Boyd, Dairy-winning grizzle. Hen (7): 1, Tattersall, cobby in build, wide skull, stout well-set beak, failing in color; 2, Grant, moderately good in skull formation and beak substance, again fails in evenness of color and straightness of outlook; 3, Grant, stout beak, fairly good color, just a shade light in eye; 4, Tattersall, capital strength of beak, again slightly down-faced; r, H. Smith, faulty in wattle formation and color; empty, A. M. Smith, Tattersall.

VOLUME XXVI JOHNSTOWN, N. Y., JANUARY 1, 1907 No. 683

MARKET POULTRY IN AMERICA

By Edward Brown, F. L. S.

Prof. Brown, of England, who recently visited this county, is responsible for the following criticisms of our market poultry industry which appears in his Report of the Poultry Industry of America:

With one or two exceptions, to be afterwards noted, the average quality of chickens seen in the retail stores and on hotel tables, both in the United States and Canada, is distinctly below that found in western Europe, but more the former than the latter. This result is partly due to the great consumption of broilers, which, however good they may be in some respects, lack the size and abundance of flesh found on heavier birds that have been fed up before killing. There is an abundance of larger fowls to be obtained, as with us, about equal in food value to our third and fourth rate poultry, and serving a most useful purpose, but I did not see anywhere specimens comparing with the best fowls seen on English, French, or Belgian markets. If our methods of fattening have no other merit they certainly give a finish to the birds, filing up the skin with fine mellow flesh which, as yet, has not been obtained in any other manner. This lack of finish is evident everywhere, more so in some American markets than in others. The absence detracts greatly from the appearance in the eyes of anyone accustomed to the fine chickens and fowls found in Europe, more than is the loss of weight and quality of flesh. For hundreds of years Europeans have been familiar with the finest fowls in the world, but it is not too much to say that America has not touched that side of the question.

To some extent these results are due to the fact that in the states yellow skinned birds are preferred to white, whereas the reverse prevails in Europe, where, with the exception of one or two districts, white fleshed fowls will always command the top prices. To anyone accustomed to the milk white fowls of England and France, a yellow bird looks inferior. The common idea in America is that yellow or creamy flesh is fuller in flavor, and as a consequence birds so distinguished command the higher rates. With this view we cannot agree, and regard it as altogether erroneous. In our judgment a white skinned and fleshed bird has a delicacy of flavor and a richness of meat unknown to one which is yellow in these respects. But in the states the opposite opinion is held very strongly, although there are signs that a change is taking place, and that the European idea is finding a measure of acceptance. In Canada the preference is for white fleshed birds, probably owing to the large number of British and French in that country, and to the fact that for some years the English market demands were kept in view.

The predilection in favor of yellow flesh has controlled the class of fowls kept in the United States. For many years no race which had not this distinctive quality has attained any measure of popularity. Among imported breeds are Brahma and the Leghorn, both of which have been largely kept, more especially the latter, are evidences in proof. And all the made breeds which we place in the American class as they originated in the country, such as the Dominique, the Plymouth Rock, the Wyandotte, and the Rhode Island Red, are very yellow in flesh and skin. At one time I was inclined to the view that there must be special soil conditions favorable to the development of yellow in legs and skin, as is the case upon heavy land, which may have been the fact in the early days of their evolution, but such does not appear to be true now, for the greater part of American poultry are bred on lighter lands, at least in the eastern states, and its fixity can only be attributed to selection and breeding. In Canada large numbers of the American varieties are kept, probably more than any other, but the Buff Orpingtons are rapidly advancing in favor by reason of their white flesh and excellent meat qualities. Revert-

PARTRIDGE COCHIN HEN—"Courtesy of Poultry."

ing to one of the breeds already mentioned, the Light Brahmas, of which more is said below, it may be mentioned that these differ greatly from the English type, in that they have not been bred for feather, are not disfigured by heavy hocks and leg and foot feathers, and are better as layers and in flesh properties, resembling the specimens seen in England forty years ago, ere the breed had been ruined by fanciers breeding to a useless and undesirable standard.

As already indicated, the broiler is a special feature of the American chicken trade. The term used designates a bird suitable for making what used to be called in England "spatch cock," that is, after the intestines are removed and the head, neck and legs are cut off, it is split along the back and laid out flat with breast upwards. Cooking is generally by dropping into boiling fat in Europe, the finest method for young chickens, or, as in America, by cooking on a grill or front of the fire. From a valuable little work entitled "Broilers and Roasters," pp. 4—5, by Mr. J. H. Robinson, the following is taken:

"The market demand to-day is for broilers of three sizes: small broilers, large broilers, and squab broilers. The ordinary small broilers—the size most in demand during the greater part of the year—weigh, when dressed, plucked, but undrawn, and with head and feet on, from 2 to 2½ pounds the pair. They may weigh less or more, but this is the desirable range of weights; that is a pound to a pound and a quarter apiece. The desirable average weights for large broilers are 3 to 3½ pounds to the pair; that is, a pound and a half to a pound and three-quarters apiece. They may go to 2 pounds or more each, but when the desirable weights are exceeded they will not, as a rule, bring as high prices per pound, so that there is seldom gain, and may often be loss, by marketing these larger chickens as broilers. Squab broilers have been in general demand for only a few years. They are small broilers weighing 1½ to 2 pounds to the pair; three-quarters to one pound each. The demand for them is mostly confined to the latter half of the winter. The call for squab broilers seems to have begun with the willingness of caterers, who found it diffiuclt to get suitable game for banquets and like occasions, to use broilers smaller than had previously been considered fit for table, as a substitute for game."

These squab broilers are the same as the petits poussins or milk chickens of Europa. What are called Philadelphia chickens are the larger type of broiler or birds a little heavier, and on some markets are in considerable demand for roasting. A special trade described below, chiefly in the Boston markets, is for what are called "soft roasters," by which is meant large birds, often capons, for which high prices are paid. All these classes are produced in the eastern states, and the birds are consumed when quite fresh. Beyond is the great mass of western supplies, distinctly inferior in flesh qualities, due to the conditions under which the birds are reared, and the fact that this is almost entirely a cold storage trade. Of the grades named squab broilers are usually Leghorns; small and large broilers, Wyandottes or Plymouth Rocks; small roasters, Plymouth Rocks; large roasters, Light Brahmas; and western chickens all sorts and conditions. None of these are fatted, as we understand the term, as cramming is regarded as unnecessary.

This trade which has grown to its present proportions within the last ten years has attained very large dimensions. Within five miles of West Norwell, Mass., scores of thousands are produced annually. Yet the demand has grown much more rapidly than the supply, for prices are well maintained, and, as shown later, are high. A remarkable feature is that it is not a farmer's business, but chiefly in the hands of specialists who devote themselves almost entirely to it, save that, in some cases, they grow fruit or other crops to sweeten the land. The poultry, however, are the profit earning section of their work. I visited several of the poultry farms in company with a member of the firm of Curtis Bros., who buy from the growers the live birds, kill, pluck, and market, acting as salesmen in Boston. They informed me that their annual overturn is $80,000. The members of the firm named were boot makers, but driven out of that trade by big manufacturing concerns, turned their attention to the poultry business to which they have brought a keen commercial instinct. Others have made a similar change, and with evident success, for the signs of prosperity are apparent everywhere in a state where derelict farms are plentiful. One of these men, a carpenter, commenced breeding chickens as a side issue, but five years ago gave up wood working for poultry farming. This year he had by the time of my visit in June sold about 4,000 birds for $5,000 (£1,000). His labor bill had not exceeded $100 (£20), and the food consumed had cost $2,500 (£500), so that the profit after payment of other minor expenses was much greater than he could have hoped for in his former trade. He commences to hatch in August, going right through the winter, and all the birds are marketed by May. Another, Mr. H. D. Smith, of Crystal Springs Poultry Farm, Rockland, Mass., had been in a city business, but gave it up for poultry rearing. He started with a very modest capital twelve years ago, has succeeded so well that he has bought a farm of forty acres, and if that can be accepted as a proof of prosperity, is able to maintain a motor car for his own pleasure. He makes a little money in other ways, as he is something of an engineer, but states that all he possesses is due to the poultry. He breeds about 6,000 chickens a year, and I found him busily engaged in the work of caponizing. Another of the breeders in this district has this year hatched 5,000 chickens, of which by June he had sold 2,000. The money received for the latter, I was informed, has paid the cost of the entire lot, and he expected to clear at least $3,000 net profit. These are fairly typical of the men whose industry and skill have made the district a great centre of poultry raising. As Mr. J. H. Robinson, in "Broilers and Roasters," says:

"The fact remains that these growers are producing far the best poultry that goes to the American market in quantity, and that they are, as a class, making more on their investment and labor than any other class of poultry keepers in the country."

As previously explained, the colony house system is almost universal in the Norwell district, both for breeding stock and older chickens. In one or two instances long range houses with divided yards are used for the breeders, but the chickens are raised in the colony houses. Mr. H. D. Smith adopts this plan: He has two such houses, each 120 feet long, holding 360 hens. In the early summer when the breeding stock are removed, the runs are ploughed up and planted with rye grass, by the adoption of which he has avoided entirely taint in the ground. He keeps only White Plymouth Rocks for small roasters, and buys Light Brahma eggs for producing the larger specimens. Both natural and artificial methods of hatching are employed, chiefly the latter, and the chickens are reared in a brooder house 150 feet long until they can dispense with heat, when they are placed in colony houses, of which he has 43 in use. Here they are kept in flocks of 50 until sold for killing. These houses are seven feet by six feet, with netted fronts. The inmates are given free range on the scrub land, of which not more than ten acres are used at one time, and as it is only occupied for seven months of the year, when vacated it is cropped to utilize the manure and sweeten the soil. The method of feeding is simple in the extreme. Hoppers are kept both in the brooder and colony houses, containing cracked Indian corn and wheat and beef scrap. At one time Indian corn was largely employed, but several of the feeders are finding that wheat gives better results. In some cases dry mash is fed as previously mentioned, more especially during the later stages. Cabbages are freely given, and rye grass when available is eaten by the birds, who have a plentiful supply of fresh water. It is claimed that under this system the birds make steady progress, retaining the softness of flesh which is regarded as essential. For the smaller roasters in demand during the spring and summer, White Plymouth Rocks are said to be the best as they grow quickly and make five to six pound specimens. But for the winter trade, when eight to ten pound birds command the highest prices, the slower growing Light Brahba is preferred. The cockerels of the last named are almost always caponized. Further particulars as to killing and picking are given below. It may, however, be mentioned that these south shore roasters are sold alive by the breeders, and that the final work is done by specialists, such as the Messrs. Curtis. There is no actual fattening, as the birds are selected as they become ready for killing.

The system of buying and selling by weight is universal in the eastern markets. The killers buy at so much per pound; when the birds are sold to the wholesale men it is in the same manner, and the retailers charge consumers by the pound. These remarks do not apply to the small broilers, which are disposed of by the piece. So far as I could learn that is the only exception, for ducks, geese, and turkeys sell by weight. Further west during the cheap seasons the same system does not apply.

From an interesting brochure published by Mr. Chas. A. Cyphers, I quote the approximate time required by different breeds to produce broilers and roasters, which, in view of the particulars already given, will afford useful information:

"In the Leghorn class, 1 lb. 10 weeks, 1½ lbs. 12 weeks; in the Wyandotte class, 1 lb. 8 weeks, 1½ lbs. 10 weeks, 2 lbs. 12 weeks, 4 lbs. cockerel 21 weeks; in the Rock class, 2 lbs. 10 weeks, 4 lbs. pullet 21 weeks, 5 lbs. cockerel 21 weeks, 6 lbs. cockerel 25 weeks, 8 lbs. capon 30 weeks; in the Brahma class, 5 lbs. pullet 21 weeks, 9 lbs. capon 30 weeks."

I am not prepared to vouch for these figures, and in the Leghorn class the time required is longer than with us. As mentioned previously, squab broilers are sold by the piece, realizing from 3s. to 6s per couple according to the market and season. On one large farm I was told that the average was 4s. per pair. The ordinary broilers sell wholesale at from 1s. to 1s. 8d. per pound, and the highest season is in the month of May. When I visited Boston in June south shore roasters were realizing wholesale 33 cents (1s. 4½d.) per lb., retail 1s. 8d. per lb. During the winter the finest specimens command wholesale 1s. 6d. to 2s. per lb. It is customary for the men who buy from the producers to pay the latter about 3d. per lb. less than the current market rates, and the breeders find this more profitable than undertaking the work of killing and marketing themselves.

GUILFORD, CONN.

The first annual show of the Shore Line Poultry, Pigeon and Pet Stock Association, held in Town Hall, Guilford, Ct., Dec. 10-11, '06, was an unqualified success, both from a social and financial viewpoint. Oct 29th we voted to hold a show Dec. 10-11. We had six weeks to get out premium list, hire judges, hall, cooping, get specials, ribbons, etc. Our list wasn't printed till the day before our entries closed, thus cutting off most of the outside entries, but we had five hundred birds at that. This shows what kind of fanciers we have down in this part of the state of "wooden nutmegs," and as to the quality of the birds, ask "Wed" Card or Charlie Bunnel, who placed the ribbons. Single Comb Brown Leghorns, Barred, White and Buff Rocks, Rhode Island Reds and Black Langshans were the banner classes. We are already working for '07 and our show next year will be a "hummer."

PAUL P. IVES, Sec.

The awards:

BARRED PLYMOUTH ROCKS—Cocks 1-2 Albert Storer, 3 J. W. Grosvenor, 4 Joseph D. Kelsey; hens 1-2-3 Albert Storer, 4 J. W. Grosvenor; pens 1 Albert Storer, 2 J. W. Grosvenor, 3 Andrew Ewing, 4 A. H. Lombard; ckl. 1-2-3-4, pullets 1-2-3-4, Storer.

WHITE PLYMOUTH ROCKS—Cock H. S. Davis, 2-3-4 Emerson G. Holbrook; hen 1-2 Davis, 3-4 Holbrook; ckl 1-2-3 pullet 1-2-3-4, pens 1-2, Holbrook.

BUFF PLYMOUTH ROCKS—Cock 1 G. W. Stewart, 2 C. P. Ives; ckl 1 W. H. Gardner, 2 C. N. Crampton, 3 Ives; pens 1 G. W. Stewart, 2 C. P. Ives; hen 1, pullet 1, Ives, 2 Stewart, 3 W. H. Gardner, 4 J. D. Kelsey.

WHITE WYANDOTTES—Cock 1 C. N. Crampton; hen 1 George Stevens, 2 Robert E. Davis, 3 Frank C. Dowd; ckl 1 W. H. Gardner, 2 Burton Bishop, 3 C. N. Crampton, 4 F. C. Dowd; pullet 1 Davis, 2 Gardner, 3 Bishop, 4 Dowd.

SILVER PENCILED WYANDOTTES—Cock 1, pullet 1, hen 1-2 Elbert Maynard.

PARTRIDGE WYANDOTTES—1 E. C. Chaudler.

SINGLE COMB RHODE ISLAND REDS—Cock 1 B. B. Munger, 2, Mrs. Dadmun; hen 1-3 Munger, 2 Robert E. Denison, 4 Stephen Robinson; ckl 1 A. B. Walker, 2 Elmer Fairchild, 3-4 Munger; pullet 1 Elmer Fairchild, 2-3-4 Bishop; pen 1-2 Stephen Robinson.

ROSE COMB R. I. REDS—Ckl 1, pullet 1-2; pen 1 B. B. Munger.

BUFF BRAHMAS—ckl 1. pullet 1, J. Delamarre.

BLACK LANGSHAN—Cock 1-2, hen 1-2-3-4, ckl 1-2 Paul Ives, 3-4 Geo. P. Gardner; pullet 1-2-3-4, pen 1-2, Ives.

WHITE LANGSHANS—Cock 1, hen 1, ckl 1, pullet 1, W. H. Gardner.

S. C. B. LEGHORNS—Cock 1-2 C. P. Ives, 3 Revere Poultry yards, 4 Justus Denison; hens 1-2 Revere yards, 3 Denison, 4 Ives; pens 1 Revere yards, 2 Ives, 3-4 Frank C. Leete; ckl 1-3 Ives, 2 W. H Lee, 4 Revere yards; pullets 1-2 Revere yards, 3 Ives, 4 W. H. Lee.

ROSE COMB BROWN LEGHORNS—cock 2, hen 1, Burton Bishop, 2 A. H. Lombard, 3 Robert Denison; pullet 1-2-3, ckl 1-2, Denison.

SINGLE COMB WHITE LEGHORNS—Ckl 1-2 Ives, 3 W. H. Lee; pen 1, pullet 1-2 Lee, 3-4 Ives.

MOTTLED ANCONAS—Cock 1, hen 1, ckl 1, pullet 1, W. H. Gardner.

BLUE ANDALUSIAN—Cock 1-2, ckl. 1-2, hen 1-2, pullet 1, pen 1, J. E. Bliss.

WHITE CRESTED WHITE POLISH—Cock 1, hen 1, ckl 1, pullet 1, Mrs. Grace and Miss Francis Gardner.

GOLDEN POLISH—Cock 1-2, ckl 1-2, hen 1-2, pullet 1-2, pen 1, C. P. Ives.

HOUDANS—Cock 1, ckl 1, Fernor G. Walton.

SINGLE COMB BUFF ORPINGTONS—Cock 1, ckl 1, Tyler Cruttenden, 2 Frank C. Dowd, 3 C. N. Crampton; pullet 1-3 Cruttenden, 2 Crampton, 4 Dowd.

SINGLE COMB BLACK ORPINGTONS—Ckl. 1, pullet 1, Tyler Cruttenden.

PEKIN DUCKS—1 young drake, young duck to John Delamarra.

INDIAN RUNNER—Old and young all to C. P. Ives.

COLORED MUSCOVY—Old and young all to C. P. Ives.

HOMING PIGEONS—Red Checker 1 C. P. Ives, 2 G. P. Gardner, 3, Bradford Latham; Blue Checker 1 B. Latham, 2 C. P. Ives, G. P. Gardner; Blues 1 Gardner, 2 Latham; Yellow Checker 1-2 Ives; Blacks 1 Ives; Dun 1 Ives; Blue Spanish 1 B Latham; Red Splash 1 Latham; Silver Dun 1 Gardner.

SATISFACTORY READING.

Your reports publishing ALL the winners at the shows make very satisfactory reading, and must make friends.

GEO. A. SIMMONS.

Penn Yan, N. Y., Nov. 13, 1906.

HOLYOKE, MASS.

December 4 to 6.

The second annual poultry show of the Holyoke Poultry and Pet Stock Association goes into history as a show of remarkable quality in an exhibit of high-class birds, unfailing pluck and most able management. Of the various breeds, Rhode Island Reds were the most numerous, with the Leghorns close second; the Rock classes well filled; Wyandottes showing strong. Bantams of all kinds, some waterfowl, and not a poor bird in the show. Those worthy of special mention are 1st S. C. R. I. Red cockerel, a very brilliant, even colored bird, a winner anywhere. 1st, 2d and 3d S. C. White Leghorn cockerels and 1st pullet, being gems of the first water in their classes. 1st cockerel White Plymouth Rock, winning color special for whitest bird offered by Ivory Soap Co. 1st pullet in White Wyandottes, of great color quality; a bird to be proud of in any show. Orpingtons were out in goodly numbers and excellent conditions. Minorcas large, lusty and splendid, in fact every class showing extra condition and care of health and plumage throughout. A long advance in the right direction for better poultry and more of it. W. H. C.

Below are the awards:

BARRED PLYMOUTH ROCKS—Cock Meadow City Poultry Yards, 2-3 Alfred Coupe, 4 A. S. Williamson; hen 1-2 W. E. Copley, 3-4 Riverside Poultry Yards, 5 Meadow City Poultry Yards; cockerel 1-3 Riverside Poultry Yards, 2 John J. Barry, 4 Williamson; pullet 1 Copley, 2 Coupe, 3-4 Meadow City Poultry Yards, 5 Barry.

BUFF PLYMOUTH ROCKS—Cock 1 Charles P. O'Connor & Son, 2 J. T. Kelleher; hen 1-2 O'Connor & Son; cockerel 1 O'Connor & Son; pullet 1-2 O'Connor & Son, 3 Frederick Childs, 4-5 F. Flarington.

WHITE PLYMOUTH ROCKS—Cock 1-3 Malone & Kennedy, 2 F. G. Field, 4 W. D. Downs, 5 C. E. Hodgkins; hen 1 Field, 2-5 M. J. Landers, 3 W. D. Downs, 4 A. W. Rapier; cockerel 1-2 Landers, 3 Field, 4-5 Frank H. Smith; pullet 1 Landers, 2 Hodgkins, 3 Downs, 4 Field, 5 Smith.

BUFF WYANDOTTES—Cock 1 E. E. Bushnell; hen 1-2 Ralph L. Rigali ,3 Stuart A. Howland; cockerel 1 George N. Miller, 2-4 Rigali, 3-5 Howland; pullet 1 James F. Jess, 2-3-4 Rigali, 5 Howland.

GOLDEN WYANDOTTES—Cock 1 Frank Vogel; hen 1-2-3 Vogel; pullet 1 F. E. Shumway.

PARTRIDGE WYANDOTTES—Cock 1 George F. Eastman; hen 1 Eastman; cockerel 1 Eastman; pullet 1 Eastman.

SILVER LACED WYANDOTTES—Cockerel 1 P. J. Tyler; pullet 1 Tyler, 2 William Crossley.

SILVER PENCILLED WYANDOTTES—Cock 1 Eastman; hen 1-2 Eastman.

SILVER LACED WYANDOTTES—Cockerel 1 Eastman; pullet 1-2 Eastman.

WHITE WYANDOTTES—Cock 1 L. E. O. B. Smith, 2 George M. Sault, 3 William Sandy, 4 F. N. Groesbeck, 5 E. E. Bushnell; hen 1-5 L. E. & O. B. Smith, 2 E. M. Ramsey, 3 William Sandy, 4 George Barnett, jr.; cockerel 1 Sandy, 2 Barnett, jr., 3 A. Whipple & Son, 4 H. W. Ellsworth, 5 L. E. & O. B. Smith; pullet 1 Sandy, 2 A. Whipple & Son, 3-5 L. E. & O. B. Smith, 4 Barnett, jr.

COLUMBIAN WYANDOTTES—Cock 1 Eastman; hen 1-2 Eastman; cockerel 1 Eastman; pullet 1 G. A. Baer, 2-3 Eastman.

S. C. R. I. REDS—Cock 1 M. E. Ruther, 2 Valley Farm, 3 Ralph N. Bachelor, 4 Bowles Farm, 5 A. C. Chapin; hen 1 Bowles, 2 Chapin, 3 Valley Farm; cockerel 1 Chapin, 2 Benjamin Powell, 3 J. McNeish, 4 DeGraff Poultry Farm, 5 Norman Harrington; pullet 1 Chapin, 3 Walter Adams, 3 Norman Shannon, 4 Powell, 5 Bowles Farm.

R. C. R. I. REDS—Cock 1 Finlay Cameron, 2 A. E. Lowcock, 3 Shannon; hen 1 Chapin, 2-3 Lowcock, 4 Edw. P. Tilton; cockerel 1 Tilton, 2 Chapin, 3 Lowcock, 4 Shannon, 5 Cameron; pullet 1-3 Bowles Farm, 2 Tilton, 4 Lowcock, 5 Cameron.

S. C. BROWN LEHGORNS—Cock 1 Edwin A. Varney, 2 L. M. Blodgett Co.; hen 1 C. S. Cook, jr., 2 Earl H. A. Bagg, 3 Varney, 4 Blodgett Co., 5 Gustave Schimke; cockerel 1 Varney, 2 Schemke, 3 Tyer, 4 Blodgett Co., 5 Bagg; pullet 1 Cook, jr., 2-4-5 Schimke, 3 Blodgett Co.

R. C. BROWN LEGHORNS—All to Liddell.

BUFF LEGHORNS—Cock 1-2 G. N. Phetteplace, 3 Carl Schimke; hen 1-2-5 Carl Schimke, 3-4 Phetteplace; cockerel 1 R. A. Lathrop, 2-4 Carl Schimke, 3 Phetteplace, 5 Esten R. DeGowin; pullet 1-2 Carl Schimke, 3-5 Phetteplace, 4 Lathrop.

S. C. WHITE LEGHORNS—Cocks 1-2 W. J. Blake, 3 Bowles Farm, 4 Oscar Bessler, 5 George A. Lamb; hen 1-2 Bowles Farm, 3-4 Bessler, 5 Blake; cockerel 1 Blake, 2 R. E. Cooper, 3 Blake, 4 Bowles Farm, 5 Lamb; pullet 1-4 Lamb, 2 Bowles Farm, 3-5 E. E. Schortmann.

R. C. WHITE LEGHORNS—Cock 1 A. Brown, 2 L. M. Blodgett Co.; hen 1 Brown; cockerel 1 Brown; pullet 1 Brown.

HOUDANS—All to Park View Poultry Yards.

S. C. BUFF ORPINGTONS—Cock 1-3 Miss H. E. Hooker, 2 Harry Kuenzel; hen 1-2-3 Miss H. E. Hooker; cockerel 1 Childs, 2-3-4 Miss H. E. Hooker; pullet 1-3-4 Miss H. E. Hooker, 2 Childs, 5 Kuenzel.

S. C. BLACK ORPINGTONS—Hen 1 Hodgkins; cockerel 1 Hodgkins.

S. C. BLACK MINORCAS—Cock 1 James Beattis, 2 Shannon, 3 Leary; hen 1-3 Beattie, 2 Leary; cockerel 1-2-3 Beattie; pullet 1-2-4 Harrington, 3 Beattie.

BLACK JAVA—Cock 1 H. A. Thayer; hen 1 Thayer.

BLUE ANDALUSIANS—Cock 1 Thomas Scott.

FRIZZLES—All to Tyer.

S. S. HAMBURGS—Hen 1 J. A. Baer, 2 Alexander Brown; cockerel 1 Claude Hume; pullet 1 Hume.

BLACK LANGSHANS—Cockerel I C. P. Atkinson; pullet 1 C. P. Atkinson.

CORNISH INDIAN GAME—Cockerel 1 Tyer; pullet 1 Tyer.

SMOKE BALL GAME—Cockerel 1-3 Enoch Walley.

RED BREST GAME—Cock 1 Shannon.

WHITE INDIAN GAME—Cockerel 1 Tyer; pullet 1 Tyer.

English Pit game—All to James W. Thorpe.

BUFF COCHIN BANTAM—Cock 1 James Williams, 2 H. A. Thayer, 3 James F. Jess; hen 1 Williams, 2 Jess; cockerel 1 Charles P. O'Connor & Son, 2 Williams; pullet 1-2 Williams, 3 O'Connor & Son.

BIRCHEN GAME BANTAM—Cock 1 Mrs. Robt. Whitaker; hen 1 Mrs. Robt. Whitaker.

GOLDEN SEBRIGHT BANTAM—Cock 1 Hreman Engle, 2 J. K. Morrill, jr.; hen 1 Morrill, jr., 2 Engle; cockerel 1 Engle, 2 Nagle; pullet 1 Engle, 2 Nagle.

W. C. W. POLISH BEARDED BANTAM—All to Mrs. Robt. Whitaker.

W. C. W. POLISH PLAIN BANTAM—All to Mrs. Robt. Whitaker.

OLD ENGLISH GAME BANTAM—Hen, cockerel, pullet 1 Mrs. Robt. Whitaker.

BLACK COCHIN BANTAM—All to Alfred Coupe.

BLACK RED GAME BANTAM—Cock and hen to Tyer.

GOLDEN DUCKWING BANTAM—All to Tyer.

LIGHT BRAHMA BANTAM—Cock and hen to Tyer.

WHITE FANTAIL PIGEONS—Pair 1 H. A. Thayer.

FLYING HOMER PIGEONS—Collection 1 Thayer.

ARCHANGEL PIGEONS—Pair 1-2-3-4 Griswold & Adams.

CHINESE OWL PIGEONS—Pair 1 F. N. Groesbeck.

WHITE NUNS—Pair 1 Groesbeck.

PEKIN DUCKS—Drake, young 1 Loomis & Rood, 2 G. A. Baer.

PEKIN DUCKS—Young 1 Baer, 2 Loomis & Rood; old 1 Tyer.

COLORED MUSCOVY—Drake 1-2 Tyer.

BLUE MUSCOVY—Drake 1 Tyer; duck 1 Tyer.

WHITE MUSCOVY—Drake 1 Tyer; duck 1 Tyer.

WILD WALLARD—Duck 1 Tyer.

INDIAN RUNNER—Duck 1 Tyer.

WHITE CRESTED—Drake 1 Tyer; duck 1 Tyer.

ROUEN DUCKS—Drake 1-2 W. D. Ballard; ducks 1-2 Ballard.

BUFF TURKEYS—Cock, hen to Tyer.

BRONZE TURKEYS—Cock, hen to Tyer.

SEBASTOPOL GEESE—Gander, goose to Tyer.

EMBDEN GEESE—Gander, goose to Tyer.

AFRICAN GEESE—Gander, goose to Tyler.

BROWN CHINA GEESE — Gander, goose to Tyler.

WHITE CHINA GEESE—Gander, goose to Tyler.

TOULOUSE GEESE—Gander, goose to Tyler.

PENS.

BARRED PLYMOUTH ROCKS — 1 Coupe.

BUFF PLYMOUTH ROCKS—1 Charles P. O'Connor & Son.

WHITE PLYMOUTH ROCKS—1 F. G. Field, 2 Malone & Kennedy, 3 Benjamin W. Bemis, 4 W. D. Oowns, 5 C. C. Hodgkins.

BUFF WYANDOTTES—1 Stuart A. Howland, 2 Ralph L. Rigali.

PARTRIDGE WYANDOTTES—1 Eastman.

GOLDEN WYANDOTTES—1 C. P. Houghton.

SILVER PENCILED WYANDOTTES—1 Eastman.

WHITE WYANDOTTES—1 George Friedrich, 2 E. E. Bushnell, 3 George Barnett, jr., 4 L. E. & O. B. Smith, 5 A. T. Buckout.

COLUMBIAN WYANDOTTES—1 Eastman.

S. C. R. I. REDS—1 De Graff Poultry Farm, 2 Powell, 3 Chapin, 4 Valley Farm.

R. C. R. I. REDS—1 Lowcock, 2 Bowles Farm, 2 Edw. P. Tilton, 4 Henry Winkler.

S. C. BROWN LEGHORNS—1 L. M. Blodgett Company.

S. C. BUFF LEGHORNS—1 Carl Schimke, 2-4 Phetteplace, 3 Esten R. DeGowin.

S. C. WHITE LEGHORNS—1 Lamb, 2 Bowles Farm, 3 Henry Winkler, 4 Bemis, 5 O. M. Pomper.

S. C. BUFF ORPINGTONS—1 Miss H. E. Hooker.

S. C. BLACK ORPINGTONS—1 Enoch Valley.

S. C. BLACK MINORCAS—1 Norman Harrington, 2 James Beattie.

GOLDEN PENCILLED HAMBURGS—1 Lyman G. Preston.

S. S. HAMBURGS—1 Preston.

BLACK BREASTED RED GAME BANTAM—1 Bemis.

W. C. W. POLISH BEARDED BANTAM—1 Mrs. Robt. Whitaker.

OLD ENGLISH SPANGLED GAME BANTAM—1 Mrs. Robt. Whitaker.

BLACK COCHIN BANTAM—1 Coupe.

ENGLISH PET GAME—1 James W. Thorpe.

DALLASTOWN (PA.) SHOW.

The second annual exhibition of the York Co. (Pa.) Fanciers' Association was held at Dallastown, Pa., Nov. 26 to Dec. 1, 1906. It was in every sense a quality show, and the 896 entries included many "bang up" specimens. The show was copped and in perfect readiness for the judge to commence work at 9 o'clock the first day. The birds were properly classiged, nicely cooped and carefully carred for. Premium cards were put up as fast as the awards were made. The White Wyandottes were the strongest class, followed by White Plymouth Rocks. The winners in these two classes were good typical specimens of excellent color. There was also some fine Silver, Buff and Partridge Wyandottes; Columbians were also out in force. The other classes were all stronger and better than last season, in fact there was quite keen competition in all the breeds. The officers of the association do not put on any frills, do not even wear badges, and one has to enquire "who is who." All are ardent fanciers, and defeat unruffles their enthusiasm and then congratulate the winners in the right spirit. Dallastown and vicinity is a regular poultry fanciers' mecca —everyone keeps some pure breed of some kind. The officers are R. A. Kinsley, president; Jacob Eberly, secretary; H. M. Raab, vice-president, and Harry Ness, treasurer. G.O.B.

The awards:

G. O. Brown, judge.

BARRED ROCK—Cock 1, hen 1, cockeler 4-5, pullet 1-2, pen 3 George Stump; cock 2, pen 1 J. W. Wert; hen 2, 3, 5, pullet 4, cockerel 2, pen 2 Smith Bros.; cockerel 1 Kaltreider; cockerel 3, pullet 3 Bosley; pullet 5 Flinchbaugh; pen 4 Smith; pen 5, Kraft & Son.

WHITE ROCKS—Cock 1, cockerel 1, pullet 1-4, pen 3 H. M. Geesey; cock 3, hen 5, pen 2 Westerhold; cock 4, hen 3, cockerel 4, pullet 3, Orwig; cockerel 3 Bruckart & Mayer; cockerel 5, pullet 2 Ness; pen 1 Metz.

BUFF ROCK—Cock 1-2 Eberly; cock 3-5 Wege, 4 Hay; hen 1-2-4 Eberly, 3 Ness; cockerel 1 Ness, 2-4 Eberly; pullet 3, cockerel 3 Knaub; pullet 1 Wege, 2-4 Eberly; pullet 5 Fairview farm; pen 1 Ness, 2 Eberly, 3 Hildebrand.

SILVER PENCILED ROCKS—All to Westerhold.

COLUMBIAN ROCK—Pullet 1-2 Hertz; cockerel 1 Gibson.

SILVER WYANDOTTE—Cock 1 Shirk, 2 Strevig, 3- Sunnyside Poultry yards; hen 1-4 Sunnyside Poultry yards, 2 Strevig, 3 Shirk, 5 Westerhold; cockerel 1-2 Spatz, 3 Shirk, 4 Sunnyside Poultry yards, 5 Strevig; pullet 1 Fix, 2 Spatz, 3 Stabley, 4 Strevig, 5 Sunnyside Poultry yards; pen 1-2-4 Strevig, 3 Shirk, 5 Westerhold.

WHITE WYANDOTTE—Cock 1 Westerhold, 2 Rojahn, 3 Kaltreider, 4-5 Darone; hen 1 Fairview farm, 2-4 Dallas Poultry yards, 3 Darone, 5 Ropahn; cockerel 1 Darone, 2-4 Dallas Poultry Yards, 3 Stump, 5 Orwig; pullet 1 Strevig, 2 Darone, 3 Zone, 4-5 Dallas Poultry yards; pen 1 Strevig, 2-3 Darone, 4 Heindle, 5 Smith.

BUFF WYANDOTTE—Cock 1-2 Eberly, 3 Trone, 4 Ness, 5 Hildebrand; hen 1-4 Trone, 2 Eberly, 3 Wyandotte Poultry yards, 5 Wert; ckl. 1-2, Eberly, 3 Trone, 4-5 Fix; pullet 1-3-5 Eberly, 2 Trone, 4 Wert; pen 1-2 Eberly.

PARTRIDGE WYANDOTTE—Cock 1-2; hen 1-2-5, ckl. 1-2-5, pullet 1-4, pen 1-2, R. A. Knisely; cock 3, hen 3, ckl. 4, pullet 3, Wyandotte Poultry yards; hen 4, ckl 3, pullet 2, Kraft & Son; pen 3, Hildebrand; 4, Schmuck.

GOLDEN WYANDOTTE — Cock 1, Druck, 2 Knisely, 3 Jackson, 4 Sparr; hen 1-2 Knisely, 3 Wyandotte Poultry yards; 4 Jackson, 5 Druck, ckl 1 Smith, 2 Kraft & Son, 3 Knisely, 4 Mrs. Spencer; pullet 1 Kraft & Son, 2-3-4 Knisely, 5 Sparr.

SILVER PENCILED WYANDOTTE—Cock, 1 Gibson, 2 Collins, 3 Matheus, 4 Wyandotte Poultry yards; hen, 1 Kraft & Son, 2-5 Collins, 3-4 Gibson; pullet, 1-2 Mahteus, 3 Wyandotte Poultry yards.

BLACK WYANDOTTE—All to Wyandotte Poultry yards.

COLUMBIAN WYANDOTTE—Cock 1-2, hen 1-2-4-5, ckl. 4-5, pullet 2-3-4, Bruckart & Mayer; hen 3, ckl. 2, pullet 5, pen 2-3, Columbian Wyandotte company; ckl. 1, pullet 1, Surrick; ckl. 3, pen 1, Peeler.

BLACK JAVA—Ckl. 1, hen 1-2, Reinhold; ckl. 2, pullet 1, Keeney.

LIGHT BRAHMA—All to Fix except hen 1-2-3, Westerhold.

BUFF BRAHMA—Pen 1, Charles Ness.

BLACK LANGSHAN—All to H. A. Collins.

S. C. WHITE LEGHORN—Cock 1-2, hen 2-3, ckl 4-5, pen 1, Jackson & Conaway; hen 1, ckl. 2, pullet 1-3, Bostion; pullet 2-4, pen 3, Grim; ckl. 3, Morris; ckl. 1, pullet 5, Sunnyside Poultry yards.

R. C. WHITE LEGHORN—Cock 1, hen 1-2-3-4, ckl. 1-3, pullet 2-4-5, pen 1, Grim; ckl. 2-4-5, pullet 1, Ziegler; pullet 3, Sunnyside Poultry yards.

S. C. BROWN LEGHORN—Cock 1, hen 1-2-3-4, ckl. 1-2-3-4, pullet 3-5, S. J. Harlacher; pullet 1-2-4, E. N. Morris; hen 5, ckl. 5, Bostion.

R. C. BROWN LEGHORN—Cock 1, hen 1, ckl 3-4-5, pullet 4-5, Kauffman; ckl, 1-2, pullet 1-2-3, pen 1, Shenberger.

S. C. BUFF LEGHORN—Cock 1, hen 1, Hildebrand; cock 2, hen 4-5, ckl. 2, pullet 3, Westerhold; hen 2-3, Spatz; ckl. 1, pullet 1-2, Bostion.

R. C. BUFF LEGHORN—All to Dallas Poultry yards.

S. C. BLACK MINORCA—Cock 1, hen 1, Hess; ckl. 1-3, Spatz; ckl. 2, pullet 1, Fix.

R. C. BLACK MINORCA—All to C. F. Fix.

GOLDEN POLISH—All to Smith.

W. C. BLACK POLISH—All to Snyder.

SILVER POLISH—All to Fairview farm.

BUFF ORPINGTON—Cock 1, Keeney; 2, Kaltreider; hen 1, Doll; 2, Keeney; 3, Kaltreider; 4, Landis; ckl. 1-2-3, Streett; 4, Doll, 5 Landis; pullet 1-2-3, Streett.

R. C. WHITE ORPINGTON—All to Collins.

S. C. WHITE ORPINGTON—All to Keeney.

BLACK ORPINGTON—Cock 1, pullet 3, Stambaugh; ckl. 5, pullet 4, Egger; ckl. 4, pullet 2, Little; ckl. 2, pullet 1, E. S. Eggert.

WHITE INDIAN GAME—All to S. R. Smith.

CORNISH INDIAN GAME—All to S. R. Smith.

SUMATRA GAME—All to S. R. Smith.

RHODE ISLAND RED—Cock 1-2, Arnold; 3 Sparr; hen 1 Sparr, 2-3 Arnold; ckl. 1-4 Fairview farm, 2 Sparr, 3 Arnold; pullet 1-2-3, Sparr, 4-5 Arnold.

GOLDEN SEBRIGHT BANTAM—All to J. A. Long.

R. C. BLACK BANTAMS—All to H. M. Raab except hen 1, cock 3, Wege.

BUFF COCHIN BANTAMS—Cock 1 Hamburger, 2-3 Eberly, 4 Wyandotte Poultry yards; hen 1 Wyandotte Poultry yards, 2-3-5 Eberly, 4 Zone; ckl 1-2-3, pullet 1-2-4, pen 2-3, Wyandotte Poultry yards; ckl. 4-5, pullet 5, pen 1, Eberly; pullet 2, Hamburger.

WHITE—Cock 1, Eberly; hen 1 Orwig, 2 Eberly; ckl 1 Eberly, 2-3 Orwing, 4 Shaw, 5 Sparr; pullet 1 Eberly, 2 Orwig, 3 Shaw, 4 Sparr.

BLACK—Cock 1 Eberly, 2 Wyandotte Poultry yards; hen 1-2-4 Eberly, 3-5 Wyandotte Poultry yards; pullet 1-2-3 Eberly; ckl. 1-2, pen 1, Eberly.

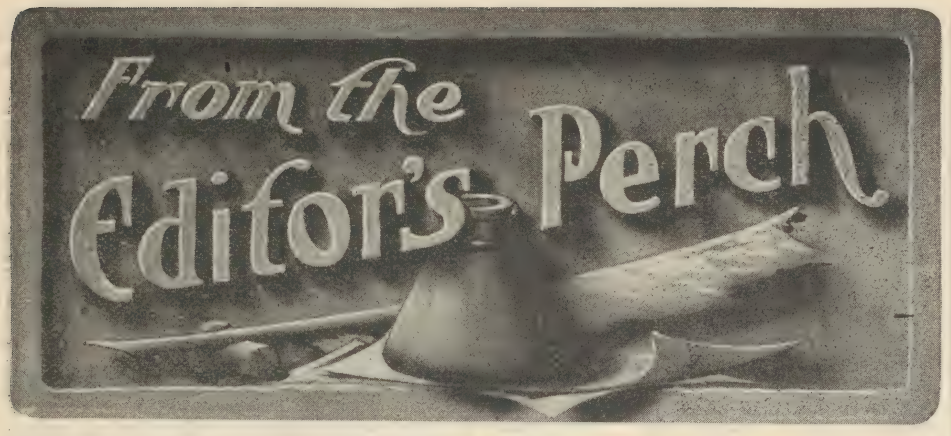
PARTRIDGE—Cock 1-2, hen 1-2, pullet 1-2, ckl. 1-2, Knisely; ckl. 3, pullet 3, Swartzbaugh.

JAPANESE BANTAMS—All to Gibson.

TOULOUSE GEESE—All to Collins.

BELGIAN HARES—Buck 1, doe 1, Lentz; buck 2-3, doe 2-3, Zeigler.

JACOBINS—All to Raab.



NEW YORK STATE ORPINGTON CLUB.

The annual meeting of the New York State Orpington Club will be held January 10, at 3 p. m., in connecton with the Auburn show. All members are urged to be present, as important business will come before the meeting. The Club offers three elegant silver cups to be competed for by the members, also several other "specials." All Orpington breeders in the state are urgently requested to join the club, which they can do by sending one dollar with name and address to

MRS. J. G. OSBORNE,
Fabius, N. Y.

PHILADELPHIA'S BIG SHOW.

Philadelphia will hold a show February 5th to 9th, 1907. A "big" show at a reasonable entry fee—$1 for poultry, 50c for pigeons. A liberal classification, prizes and specials. Judges selected are: Poultry—J. D. Nevins, L. P. Graham, F. A. Keller, Chas. T. Cornman, W. B. Atherton, W. Theo. Wittman, Fred Huyler, A. P. Ingram, R. F. Seaman. Pigeons—Thos. Scholes, John Spealler, Geo. F. Erbe, Geo. Spohn. We expect to live up to tradition and hold a big show. Every fancier is invited to exhibit with us and attend the show. For premium list, address J. G. Darlington, Sec'y, 414 Mint Arcade, Philadelphia, Pa.

It is 1907 now.

* * *

The old year has been a lively and important one in poultrydom; the new one promises to be even more so.

* * *

Looking backward brings to mind the great efforts being made to reorganize the American Poultry Association, beginning at the annual meeting held at Cincinnati a year ago and culminating in the strenuous session of the committee of fourteen at Mt. Clemens last August. Next week the melon will be cut open at Auburn, N. Y., where the A. P. A. meets to contemplate the fruits of the earnest work done by the above mentioned committee. And we may look forward to partial realization, at least, of much needed reforms.

* * *

As to the shows of the past year, they were more numerous and better than ever. The haphazard go-as-you-please show with nondescript coops, poor classification and tardy judging is slowly but surely being relegated to the tall timbers. The modern show with its uniform cooping, catalog of entries, quick judging and placing of ribbons has come to stay. It draws the crowd and pleases the exhibitors, who like to see the ribbons up the first day. It means business and is business.

* * *

A retrospect of the varieties seen at many shows the past twelve months indicates the drift toward American varieties more strongly than ever. Rhode Island Reds have made giant strides in many sections, not only in the number exhibited, but in the great advancement seen in the quality of the birds. The males are still considerably in advance of the females, as far as color is concerned, although in the past few months we have seen and handled a number of hens and pullets, both single and rose comb, that were strictly high class in the evenness and richness of the surface color, absence of mealiness and shafting being a gratifying feature.

Columbian Wyandottes are booming and coming along at a great clip. The beautiful Light Brahma markings are now frequently seen in first class Columbians and the graceful Wyandotte type is being rapidly approached. This variety is bound to be very popular for years to come. It not only pleases the eye for color, but "catches on" in shape.

* * *

White Wyandottes are still leaders in numbers at most shows, their popularity being universal. Still there has been a falling off in some sections, and we regret to say, the quality is not just as good as it might be or what it was a few years ago, i. e., as a whole. The craze for dead white plumage regardless of shape, color of skin and legs, has worked injury to this great fowl in certain sections. Practical poultry raisers have complained that the hens of some strains lay inferior eggs and not too many of them, and that often the carcasses dress white instead of yellow. That some mighty poor stuff has been sent out labelled White Wyandottes, by avaricious dealers, is unfortunately true. Some of the so-called big egg strains advertised by men who are taking advantage of the big boom in whites, are a libel on the breed and buyers should fight shy of such. There are many reputable White Wyandotte breeders, men who exhibit at the leading shows and advertise in the leading poultry papers, and these are the fanciers to deal with. First class White Wyandottes are in demand always and are not too plentiful at any time.

* * *

Silver Wyandottes are gaining in popularity and the quality is improving all along the line. It is only a question of time when this beautiful variety will be in the front row again. Golden Wyandottes are not as numerous as their merits deserve, in fact they are very much neglected. It is time to wake up the breeders a bit by encouraging larger entries with tempting specials. Partridge Wyandottes show a falling off in numbers at many shows, but the quality does not. We have seen some very beautiful specimens during the past season, but believe American fanciers are breeding birds too dark in color. Silver Pencilled Wyandottes are as attractive and beautiful as ever and some remarkably fine male birds were seen at the larger shows, specimens not only sound in color but excellent in type. Buff Wyandottes are moving along nicely and much better shape now rules in the males than in past years. Even combs are becoming more "dotty." Color has averaged fine in this variety for a number of years. Buffs are becoming very popular with market poultrymen. They are good layers and make fine broilers and roasters. Black Wyandottes should be oftener seen; they are among the best varieties for all round use and very handsome when well bred.

* * *

Plymouth Rocks are still the American idols in featherdom. The Barred variety holds its own and while not as plentifully seen at our shows as in the days of its undisputed leadership, is periodically brilliant in the individual specimens exhibited and we believe the quality is in some respects better than in past years, especially so in the better color and barring of the females. We saw less of the brownish and metallic class of birds, the bluish cast and somewhat wider barring prevailing in good show specimens. White Rocks have made the greatest advance and will crowd all others for the premier position among American varieties. The quality as a whole is far superior to any other variety now exhibited. Buff Rocks are the leaders of the buff fowls of America and are getting better year after year. Some superb specimens in color and shape were brought out the past season and the coming year will bring out a host of stars, to judge by the youngsters seen at early shows.

* * *

Asiatics have not been in the limelight very much. Excepting Light Brahmas, the rest of the Mongolians were not in evidence at most of the shows, at least not in sufficient numbers to keep up the prestige of such fine races of fowl as the Cochins, Langshans and Dark Brahmas.

* * *

Leghorns are as popular as ever and the quality in some varieties much finer than some years ago, notably in Brown Leghorn females; Buffs also show more uniformity in color and are up to a very high standard. Minorcas while as popular as years ago, when they were first boomed, seem to have reached a stage of the game where something must be done to restore the breed to a more uniform type. Shape is running riot and an even bunch of males or females, even of one strain, is a pretty rare occurrence. Some birds show too much coarseness, due to excessive weight. We like the White Minorca type better, at least what we have seen of it during the past season.

* * *

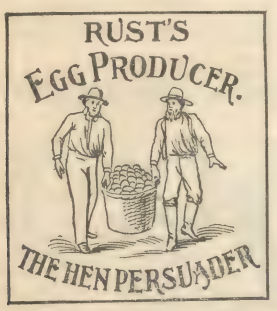
Of the English varieties the Orpingtons are still riding on the top wave of popularity and promise to be with us for years to come. The good old Dorking is having a hard time to keep up with the procession, but the few breeders who have faith in it, are enthusiastic fanciers and will keep the Dorking before the public, at least in the East.

* * *

Of the other varieties of Standard bred fowl, there has been little change. About the same quality and quantity is seen, varying only as to location of show. Polish have perhaps increased somewhat in numbers exhibited and in some varieties have improved in quality. Bantams are as popular as ever, with Buff and Black Cochins decided favorites, the quality being of the finest. Sebrights are coming again and promise larger entries in the future.

* * *

Our remarks regarding the licensing of judges by the American Poultry Association in a recent issue is commented upon by Mr. S. L. Roberts, secretary of the Boston Show, as follows:



"It was a peculiar coincidents. Your comments on licensing dogs and your review of the judges for the Boston show in the American Fancier just at hand. It started a little train of thought from my central station ward New York. I do not know in detail what the plan of the A. P. A. is in regard to licensing judges; I do know that judges make a show. Give the fanciers a good list of judges and the show will take care of itself. The premiums that even the large shows pay do not enter into the considerations of the fancier for a minute. What the fancier wants to know is who is to judge the variety or varieties that he is breeding. One would have to win a comely lot of blue ribbons to make expenses at any poultry show and as I said the premiums cut but little figure in the makeup of the show. If it is at one of the large shows where specialty clubs and the management combines and large special prizes are hung up the man with the winning birds m come out ahead of the game, but nine out of every ten exhibitors are at a loss financially at every show where he exhibits. It is not the money, but the honor of winning, if he is a true fancier, that he is after, and this honor can be turned into money if he is a good breeder as well as exhibitor. It is the judge's opinion passed upon the fancier's bird that makes it possible to turn his fancy into channels that will bring him financial returns. The show manager who endeavors to obtain the best talent possible to judge his show is the manager that is to have the best show on an average. There are certain men who are experts on certain varieties. Any of them confine themselves to one variety of poultry. With the numerous shows now being held and their dates conflicting, it is quite a stunt to get a first class list of judges. The exhibitors do not care to show under the same judge year and year out and it is up to the management to provide new material. If a show could not engage a judge unless he had been licensed, how is the new material going to be developed? It often happens that a manager desires a certain man to judge and there is but a short time before the premium list goes to press. How is this man to be licensed? He must first be examined, and there is not time for that. A board of judges selected by the association constitues an examining board and they license the candidates if found worthy. There are many fanciers to-day who are competent to go into a show room and pick the best birds in the class and it would be impossible for them to pass a critical examination. Take an exhibitor who picking up a first prize now and then; one who walks along the aisle and looks the birds over before the judge and makes a purchase before the judging is commenced and in that purchase generally gets a money winner; one who is spoken of by his fellow fanciers as a man who is on the square. There is the making of a judge and you do not want to cut him loose in a

little show, either. Turn him out in one of the big ones. It takes a pretty good judge to pass upon and select the best from a lot of poor ones. It is just such men, taken from the ranks of the breeders, who are to fill the judging positions in the future. It is such a type of judges that the fanciers are bound to support. I believe the A. P. A. should be put on a basis where it would have more jurisdiction over poultry shows than at the present time, but I cannot see any good to come from a system of licensing judges.

J. H. Drevenstedt

AN IMPORTANT NOTICE TO POULTRY RAISERS.

Every owner of fowls should send for the small booklet sent out by Wm. Rust & Sons, New Brunswick, New Jersey. It contains practical information of just the kind needed to make poultry keeping and stock keeping successful and profitable. It contains a list of the best sorts of fowls for laying, for setting, or for table use. It tells which fowls lay white eggs and which lay dark eggs. It gives hints for egg producing, for feeding, detecting and curing the principal poultry diseases and other matter of interest to poultry and live stock keepers. The booklet will be sent free to any one requesting it, also a very convenient and useful Egg Record, good for one year.

The little cut shown herewith will be familiar to those who have noticed the Rust advertisement which will be found on page 9 of this paper. It is suggestive of the results obtained by feeding Rust's Egg Producer. This valuable preparation furnished a great inducement to laying hens in the way of increased egg production, and any one desiring to secure more eggs should try it. Ask your dealer about it. If he cannot supply you write direct to the originators and manufacturers, kindly mentioning this paper.

THE CONNECTICUT AGRICULTURAL COLLEGE, STORRS, CONN.

Professor C. L. Beach has been granted leave of absence by the University of Vermont, and has accepted an invitation to spend January at The Connecticut Agricultural College. He will give instruction in the winter school short courses in dairy and creamery practice and management, assisted by Mr. H. L. Garrigus, Farm Superintendent at Storrs. Announcements will be made later as to the special features of the dairy and creamery short courses for February and March.

Professor C. K. Graham will be assisted in the Winter School poultry short course by Professor J. Willard Bolte, who is in charge of the poultry instruction at the Rhode Island College of Agriculture and Mechanic Arts. He will be assisted also by two prominent poultrymen from Massachusetts, Mr. A. F. Hunter of Abington, and Mr. W. R. Graves of Springfield. The following poultrymen of prominence in Connecticut will co-operate with Professor Graham: Messrs. W. H. Card, Bristol; C. M. Gallup, Brooklyn; F. S. Gammack, West Hartford; G. V. Smith, New Haven; G. G. Tillinghast, Vernon; H. L. Hamilton, Ellington; George A. Cosgrove, Willington, and S. L. Tuttle, Hamden. The co-operation of Mr. James E. Rice, professor of poultry husbandry at the College of Agriculture, Cornell University, has been assured, though at the present writing it is doubtful if he will be able to be at Storrs prior to Feb. 15th.

It will be remembered that the dairy, creamery, and pomology short courses will run twelve weeks, beginning the morning of Jan. 3d, and the poultry short course six weeks, beginning the same date. Applications for the dairy, creamery, and poultry courses have been on file since last year. The applications now coming in indicate that the interest of previous winters continues, and all indications point to a most successful winter school. Copies of the winter school bulletin will be sent to any address on request.

RUFUS W. STIMSON,
Dec. 18, 1906. President.

AMERICAN BUFF PLYMOUTH ROCK CLUB SPECIALS AT BOSTON.

The following cash specials to exhibiting Club members will be given at Boston:

$10 to the best male.
$10 to the best female.
$5 to the best pen.
$5 to the second best pen.
$5 each to the best cock, hen, cockerel and pullet.
$3 each to the second best cock, hen, cockerel and pullet.
$2 each to the third best cock, hen, cockerel and pullet.

Mr. Geo. Fox, Torresdale, Philadelphia, Pa., offers $5 to the best exhibition pen—1 male and 4 females. The Club also offers a handsome Silver Cup to the best cock, cockerel, hen and pullet shown by a member of the Club. Also a handsome Silk Ribbon each to the best shaped male and female, best surface colored male and female. Club meeting held on Wednesday, Jan. 16, 1907. This is the 10th anniversary within 2 days of our club.

C. A. MORTON, Sec'y.
St. Louis, Mo., Dec. 15, 1906.

ST. ALBANS, VT.

The Vermont State Poultry and Pet Stock Association will hold their eleventh annual exhibition at St. Albans, Vt., Jan. 30-Feb. 2, 1907. We have one of the largest and best lighted halls in the country. We have an extraordinary big list of cash specials and many fine silver cups, including the National White Wyandotte cup, and the Ivory Soap cup for the whitest bird in the show washed with Ivory soap. Our judges are known the world over. We have succeeded in engaging Messrs. May and Northrup to do the work, which will be done the first day of the show, and all ribbons will be up the same day. The premium lists are now ready and can be obtained by dropping a postal.

H. M. BARRETT, Sec'y,
St. Albans, Vt.

AMERICAN WHITE PLYMOUTH ROCK CLUB.

The American White Plymouth Rock Club desires the name of every party interested in White Plymouth Rocks to place it on the mailing list for the Club Year Book now in preparation. If you send in your name at once, accompanied by the membership fee of one dollar, you will be in line to compete for the valuable club specials at the poultry shows the country over for the balance of the season, and also, your name will appear in the list of members in the Year Book. At any rate send in your name, we shall be pleased to convince you that it is to your interest to become a member of this club. Address your inquiries to the Secretary-Treasurer, Seth W. Gregory, Delavan, Wis.

THE AMERICAN FANCIER

A Semi-Monthly Devoted to Poultry, Pigeons and Standardbred Stock.

Entered as second class mail matter at the Post Office at Johnstown, N. Y.

BUFF PLYMOUTH ROCKS AT PITTSBURG.

The Pennsylvania State Cup will be competed for at Pittsburg February 18 to 23, 1907. The Pittsburg Fanciers' Club offers a cup and $1.00 in cash in addition to their regular premiums on the variety.

It is hoped a big entry will be out.

NATIONAL BANTAM ASSOCIATION

The meeting of the National Bantam Association will be held on Thursday evening, Jan. 3, 1907, in the press room of Madison Square Garden at 7:30 P. M. All members are urged to be present. GEO. L. YOUNG, Sec'y.

We will send the American Fancier, price $1.00 per year; Poultry, $1.00 per year, and Pigeons, $1.00, for $2.00 the three papers for one year.

* * *

There are two reasons why you should advertise in The American Fancier.

First. It reaches directly the superior buying class, a selection from the masses of people who are able to gratify their wishes and who are the greatest consumers.

Second—Your ad. will make its appeal when its readers are relaxed from their daily cares and in a receptive mood, the best time to obtain a hearing.

NOTICE.

Beginning with this issue the American Fancier will be issued the 1st and 15th of every month.

It will contain 20 or more pages devoted to Poultry, Pigeons and Pet Stock. Full reports of the shows with criticisms will still be the feature.

The Fancier will be under the same management as heretofore, employing only those on the writing staff who are qualified to express their opinion intelligently.

Owing to the large number of requests from advertisers, subscribers and friends and the extra amount of work attached in getting out a weekly, we have decided to make the change.

January 15th issue will contain a report of the great Madison Square Garden Show, also remarks on same.

The advertising rates will be changed and all who have not taken the advantage of advertising in a magazine reaching every state in the union, besides England, Australia, Europe, Canada, South America, should try and benefit as hundreds of others are now doing.

All advertising should reach us by the 10th and 25th of each month to insure proper insertion in the current issue. Wishing all our friends a most profitable New Year, we are,

Yours Respectfully,
AMERICAN FANCIER.

More thought should be given to simplifying the labor devolving from the care of fowls in the non-producing season.

This season is bound to occur, despite the best of care, therefore provision must be made for it.

When the eggs commence to drop down daily in the number produced, those fowls intended for market could be sold, and the flocks divided into two, a producing and non-producing one.

To the latter a day's ration of mixed grain and water might be given them, when no further attention would be necessary until closing up time, when the occasional egg, if any, could be brought in.

One day a week might be allotted to cleaning up their premises, feeding a ration of meat and green food in a mash of ground feed, in place of the grain ration, supplying them with shell, etc., the object being to cut out the labor of extra attention bestowed on the layers.

Those out of condition being disposed of, all our attention could then be given to those having the appearance of layers, both among the pullets and moulted fowls. The extra delicacies would not then be shared by the drones, they could be placed where they would do the most good, extra visits could be made in half the time and labor cut down in many different ways, without endangering the income.

As time goes by and other lots get in laying shape, more pens could be allotted to the laying brigade.

Our fowls should be out of doors for a short time at least, every day suitable. There is nothing like the pure air to set the blood moving.

After a good hard freeze the sun will come out and soon all the frost on the sides and roof of the house will be turned into drops of water. It is then time to open windows or door, and let this moisture pass out, closing them by the middle of the afternoon.

Each day the litter will have become more damp and heavy, until a thaw sets in, when it will have become a wet, soggy, disagreeable mass, and ought to be removed, and dry litter put in its place. Where the fowls are housed closely, this is imperative.

Leaves make a better litter than either straw or chaff. They are more elastic and do not settle down so closely. Thousands of bags could have been gathered with us had not the right moment been allowed to slip by. Next season it is our intenton to attend the gathering of this crop the same as roots or clover or other things stored for winter. The large four bushel grain sacks, a needle, cord and the farm wagon ought to make a short job of it.

There are other points we have learned the past season. As it is pretty well understood, this farm lies in the great dairy belt supplying New York city with milk.

Of the thousands of dollars we lay out annually for feed, our cattle consume eighty per cent. and the poultry twenty per cent. In figuring the profits one finds the figures are reversed, the poultry pays eighty per cent. profit, and the cows twenty. I can say without hesitation that were I to produce all grain on the farm, necessary to carry my fowls through the moult and mature the young stock during the months of September, October, November and December, it would represent a sum larger than the profits accruing from the dairy for the entire year.

I may be radical and visionary, and do not suppose five per cent. of Fancier readers are farmers, and that the other ninety-five per cent. do not care a rap whether salt pork or broiled lobster is the usual dish on the country table or not, but it is a fact in many centers where milk is the main production, not even half a supply of vegetables for the table are grown.

THE STAR HATCHES EVERYTHING HATCHABLE.

The accompanying illustration tells the tale of a good sensible incubator. It shows at a glance the adaptability of the "Star Incubator" to varying conditions of incubation, and we publish it merely to show what this machine has accomplished.

Of course, we don't imagine for a moment that any poultry raiser will ever care to hatch the whole menagerie at one time, and we don't recommend the Star for that purpose. We do think, however, that it is a good recommendation of the adaptability of a machine to know that it can accomplish such remarkable results. It speaks well for the Star that it makes no kick, no matter what kind of eggs it is put to work on, but goes merrily about its business and "makes good."

SHOWING WHAT A STAR INCUBATOR WILL HATCH.

As the picture indicates, the "Star" isn't a bit "stuck-up" over its success, but adapts itself to the kind of company it's put with. Great thing to be able to do—lots of people can't do it, you know. If the Star was like some people it would refuse to work, and wouldn't hatch turtles if it were sold to hatch turkeys—and it might strike if expected to hatch 'gators when it was only hired to hatch guineas. But the Star makes no such distinction—it treats all eggs alike. All it asks is that the eggs entrusted to its care be hatchable, and with just a little help from the "boss," it does the rest, and does it right.

If you'd like to know more about this "Star," write to the Star Incubator Co., Church St., Bound Brook, N. J., mentioning this paper, and they will be glad to send you their beautiful catalog free.

THE CANISTEO SHOW.

The Canisteo Poultry Association of Canisteo, N. Y., will hold its second annual exhibition in that village on January 15, 16, 17, 18. The success of the Canisteo Association has certainly been phenomenal. At the show last year, more entries were received than are generally secured by the large city shows. The class of poultry on exhibition was far above the average, and as the attendance was close to the 3,000 mark, the members of the association were much encouraged. This year the show will be given in a hall having over 5,000 square feet of floor space.

In addition to the regular premiums, specials, amounting to $100.00 in cash, are to be given. Five handsome ribbons will also be awarded. As it is a score card show, every bird will be scored and the card returned with the bird. The judges for this year's show are Geo. H. Burgott and Geo. W. Webb. Both men have wide reputations as extra good judges, who do their work in a fair and square manner.

One reason why the Canisteo Association has met with such remarkable success is, that Canisteo and the surrounding country has the worst attack of "hen fever" that every struck any section of the United States, and the queer part of it is that everybody wants the highest priced and highest scoring birds to be had. Readers of the American Fancier who wish to exhibit their birds where they will be duly appreciated and where the chances of making sales and selling eggs are excellent, should send some of their stock to the Canisteo show.

The catalogues and entry blanks are now being sent out by the Secretary, James Corbett, and if breeders want to exhibit their birds where it will pay, they should write him to-day for full particulars.

MOST READABLE POULTRY PAPER.

Best wishes for the continued success of the most readable poultry paper that meets my eye, (and I see most of them).

PAUL P. IVES.

Guilford, Conn., Oct. 31, 1906.

GREIDER'S SUPERB CATALOGUE

of high bred Poultry for 1907 is larger and better than ever. Printed in beautiful colors, with 10 striking Natural Color Plates of leading breeds. Illustrates and describes Sixty Varieties of Poultry, Pigeons, Ducks and Geese.

Tells all about practical poultry houses and equipment, how to build them, how to cure diseases, make hens lay and yield good profits. Gives information of decided value to every poultry keeper; **Best Lice Destroyer**, necessary poultry supplies and prices of breeding stock and eggs which are within reach of all. Book worth far more, but sent postpaid for only 10 cents. Send for it today. B. H. GREIDER, Rheems, Pa.

BARRED PLYMOUTH ROCKS

When you buy an Exhibition or Breeding Bird you want a good one. I have them for sale line bred from my first place winners annually at the Canton, Ohio, show since 1902. Write your wants please to Canton, O., Rt. No. 4, John W. Yant. 679-730

American Fancier's Booth.

DUCKS ARE PROFITABLE.

If you wsh to secure the greatest profits in ducks, or any other poutry for that matter, you must hatch them as early in the season as possible, so that they can be placed in the market when the prices are high. This compels us to use the incubator for hatching because at such a season of the year it is next to impossible to find broody hens. It is true of marketing any product, when the supply is limited and the demand is great. A rose or carnation produced at an unnatural season will sell for five times as much as when it grows naturally. This extra profit is the remuneration the producer gets for his time and knowledge for being able to produce them at the time there is a great demand. So it is in the poultry industry. Ducks in New York and Boston sell as high as 35 and 40 cents a pound. Later in the season this price drops to12 and 14 cents per pound. If a duckling can be raised at the outside, the profits are large, where a good market can be obtained. At ten or twelve weeks old, ducklings should weigh three and a half to four pounds each, and with an average market price of 20 cents per pound a good profit can be realized. The market often depends on the class of dealers you sell to, the success you have in fattening the ducklings and the attractive appearance when dressed.

Ducks should be perfectly healthy and vigorous. It does not pay to breed from puny, dwarfed stock. It is money in your pocket to inves in the best breeding stock you can get. Breeders make a mistake to sell their most valuable birds periodically, for the best stock should be kept for breeding purposes. By so doing you will get young birds that mature more quickly and increase in size.

The anatomy of a duck is somewhat different from that of a fowl. The duck has no crop and consequently should receive less grain than fowls are given. We know of some breeders who never fed grain to their ducks. If you will notice ducks when they are eating, they gobble down a mouthful of food and then wash it down with water, another mouthful of food and another drink of water, and so on. It is necessary then to have plenty of fresh water near them so that they can feed naturally. They are an aquatic fowl and while a pond of water is not extremely necessary to be successful in rearing them, naturally their nabits are to take to water and food almost simultaneously. In feeding any fowls you must keep as close to their natural inclinations as you can if you wish success. They should be fed on bulky food, like vegetables, bran and a moderate ration of corn or cornmeal. If you feed grain it should be ground for them. Never give mouldy food of any sort. Fowls need food that is fit for human beings to eat, that is, so far as wholesomeness and cleanliness are concerned. Like geese, they will live on vegetable food, grass included, if they cannot get any thing else, but they are very fond of grain.

Ducks and geese are usually kept as a "side issue" by most general poultrymen, but when bred as a special branch of the poultry industry they are very profitable. Usually they simply furnish a variety of meat for the table with a sale of the surplus stock at a season when the cost has perhaps exceeded the selling price. When properly managed they will reap a profit that is desirable. If you would obtain the best market price your product should be of uniform size and appearance. For this reason it is best to raise and breed only one kind of ducks. The Pekin variety has become probably the most popular on account of the creamy skin, their hardiness, uniform size of drakes and ducks and their white feathers. The breeding of this variety has been perfected to a great degree in late years. At first they were long in body and neck and coarse boned. The improved type of the present day is broader in the breast and back, deeper in body and carries a much larger proportion of meat with less waste. The Muscovy is popular in some sections, but is not so desirable for market purposes because it varies so much in size. The male bird, at its best, weighs seven to eight pounds, while the female weighs only four to four and one-half pounds —some three pounds difference in the weight of the sexes. This is quite a serious fault at killing time because they have not the uniformity of appearance and weights that is necessary to secure the highest market price. The Pekin is a better market duck for this reason. Some claim also that the Pekin has a finer texture of meat.

The Indian Runner is probably the greatest competitor of the Pekin. They are medium sized birds and very active. They occupy the same relative position in duckdom that the Leghorns approximate in poultrydom. They are light feeders and heavy layers of medium-sized eggs, and are noted for their prolificacy in reproduction. But their smaller size handicaps them as a successful rival of the Pekin, for market purposes, and the best money is in raising ducks for market. Keeping ducks for egg production will never be a profitable business in our western states. In the south, especially where grain is low and shelter unnecessary, there might be fair profits in the production of duck eggs. Furthermore the production of ducks' eggs is limited to a shorter period than that of hens' eggs and there is no great demand for them, especially after the advent of the summer months.

The soil where ducks are raised has something to do with their successful rearing. A rather light and gravelly soil is preferable because such a soil naturally gives the best drainage and tends to keep the runs cleaner and sweeter.

Great injury is caused to ducks by their being exposed to too much sun, by a lack of a cool place to roose at night and a lack of fresh water in warm weather. Ducks like clean water to drink and must have it. They must have shelter.—Wisconsin Agriculturist.

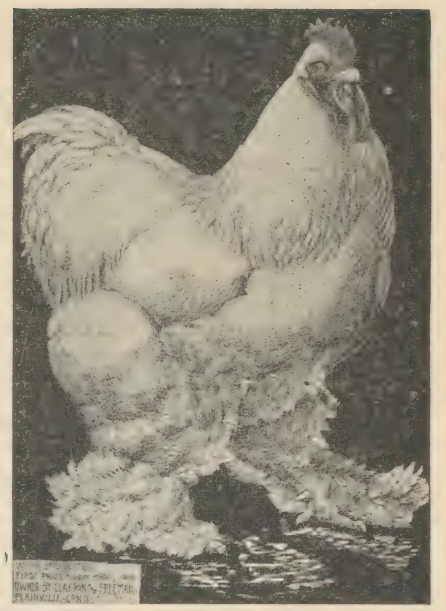
Shoemaker's Poultry Book
AND ALMANAC FOR 1907.

There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS showing them in their natural color. Tells all about all kinds of thoroughbred chickens, with life-like illustrations. Prices of eggs for hatching and fowls for breeding purposes. TELLS HOW TO RAISE POULTRY SUCCESSFULLY, their care and management and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses, and plans to build them.



ALL ABOUT INCUBATORS and BROODERS with fine illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is marvelously complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to anyone interested in the raising of fowls. IT IS AN ENCYCLOPEDIA OF CHICKENDOM. and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

POULTRY EXPERIMENTS.

By G. M. Gowell.

Experiment Station, 1906.]

(Continued.)

Food and Other Material Required to Grow Chicks to Broiler Size.

To make broiler raising profitable, warmed houses should be used and the birds raised early enough to be all marketed while high prices are obtainable.

The Station does not make a specialty of broiler raising. The chickens are raised so as to obtain the pullets for egg laying. The surplus cockerels are disposed of by growing them rapidly and getting them off to market before they annoy the pullets. As the cockerels and pullets are raised together, and the cockerels only are finished and sold as broilers, it is not possible to state just how much of the food given to the flock has been eaten by the cockerels, as they were larger and evidently ate more per bird than the pullets did. The quantities of food eaten, aside from labor, have been accounted for, in the work, and the records show that when the chicks that were hatched in April and May were 11 to 12 weeks old, the cockerels weighed about 2¼ pounds, dressed for market. Up to this time the cockerels and pullets had each averaged to eat 9 pounds of grain food, 1 pound of beef scrap and ¼ pound of grit.

When the cockerels average 2¼ pounds dressed weight, the pullets of the same age averaged 1¾ pounds, and as there were equal numbers of cockerels and pullets in the lot, the average weight of all the birds at that time was 2 pounds. Five pounds of grain and meat foods were required to produce a pound of dressed broiler, under the described conditions and practices.

The material used in the production of a 2-pound broiler cost as follows:

10 lbs. of food	16.5 cts.
Oil for incubating and brooding	2.5
Eggs incubated	4.0
Total	23 cts.

The labor involved in raising the chick and preparing it for market is not accounted for. The average prices received for each 2-pound broiler last June was 60 cents; July 50 cents, and August 40 cents.

Developing the Pullets.

When the cockerels are taken out for finishing, the pullets of the same age are moved to the grassy range, still occupying the same portable houses in which they were raised. At this time the method of feeding is changed, and dry food is kept by them constantly, in troughs with slatted sides and broad detachable roofs, so it may not be soiled or wasted. The troughs are from 6 to 10 feet long, and the sides 5 inches high. The lath slats are 2 inches apart and the troughs are 16 inches high from floor to roof. The roof projects about 2 inches at the sides and effectually keeps out the rain except when high winds prevail.

The roof is easily removed by lifting one end and sliding it endwise on the opposite gable end on which it rests. The trough can then be filled and the roof drawn back into place without lifting it. This arrangement is the best thus far found, for saving food from waste and keeping it in condition. When dry mash is used in it there may be considerable waste by the finer parts being blown away. When used for that purpose it is necessary to put it in a sheltered place out of the high winds.

In separate compartments of the troughs, they are given cracked corn, wheat, oats, dry meal mixture, grit, dry cracked bone, oyster shell and charcoal. The dry meal mixture is of the same composition as that fed to the laying hens, described on page 125 The troughs are located about the field in sufficient numbers to fully accommodate all of the birds.

The results of this method of feeding are satisfactory. The labor of feeding is far less than that required by any other method followed. The birds do not hang around the troughs and overeat, but help themselves, a little at a time, and range off, hunting, or playing and coming back again, when so inclined, to the food supply at the troughs. There is no rushing, or crowding about the attendant, as is usual at feeding time, where large numbers are kept together.

For the last 7 years we have gotten the first eggs when the pullets were from 4 months and 10 days, to 9 months and 20 days old. There is some danger of the pullets getting developed too early, and commencing laying too soon for the best results, under this system of feeding. In order to prevent such conditions, the houses should not be located too close to each other, or to the feed troughs, and a large range should be given them so they may be induced to work, which they will do, if given the opportunity early after their removal to the fields. Should the birds show too much precocity, and that they are liable to commence laying in August, the supply of cracked corn in the feeding trough is reduced, or taken away altogether, which causes them to eat the wheat, oats and dry meal instead, and they continue to grow and develop without getting too fat and ripe.

During the last days of October it is our practice to move the pullets into the laying house.

Cost of Pullets Raised for Layers.

Last season 2,000 pullets were raised for layers and the following materials were used in producing each one:

28 pounds of grain, meal and scrap, costing	44.5 cts.
¾ pounds of cracked bone	1.5
½ pounds of oyster shell	.25
2½ pounds of Mica Crystal Grit	1.25
½ pounds of charcoal	.5
1½ pints of oil	2.5
2 eggs	4.0
	54.5 cts.

Before they were moved into winter quarters, many of them were laying in the brooder houses, and the eggs from them at that time had sold for a hundred dollars.

Feeding the Hens.

For many years warm mashes made from mixtures of different meals, sometimes with the addition of cooked vegetables, were given to the hens every morning during the winter season and in warm weather mashes of similar composition but mixed with cold water were fed. The hens seemed to like mashes made in this way better than anything except corn, and if fed anywhere near enough to satisfy their appetites, they would load themselves with food and then sit down in idleness during the early part of the day. They were not willing to scratch in the floor litter for the wheat, oats and cracked corn that had been buried there for them.

The losses of hens from what appeared to be the system of feeding, caused the change of the time of feeding the mash, from morning until near night, and giving the cracked corn, wheat and oats, in the litter, in the morning and near noon.

These changes resulted in the better health and productiveness of the birds, but the crowding for the mash at feeding time and the hurried filling of their crops to repletion even near bed time, did not argue for the best.

Several different plans of feeding were compared by testing them for a year, and finally the moist mash was abandoned altogether. The present system of feeding has been practiced here for two years and is regarded as the best method thus far used. The dry meal mixture is composed of the same materials, in the same proportion as the moist mash was, but the method of feeding it is different. It is kept within reach of the birds at all times, but they never stuff themselves with it, either because they do not fear an exhaustion of the supply by their competing mates, or else it does not taste so good to them as to cause them to eat of it to repletion. Yet they appear to eat enough of it. It is rich in materials from which hens make eggs. Hens that lay many eggs must be generously nourished. In the changes in feeding made here, it was not the quantity or composition of the ration that was altered, but the feeding habits of the birds.

It is not proven that our present system for feeding is the only correct one. Some other methods may be better, but at the present time it is giving excellent satisfaction with Plymouth Rocks.

Dry Foods Only.

Early in the morning for each 100 hens, 4 quarts of screened cracked corn are scattered in the litter, which is 6 or 8 inches deep on the floor. This is not mixed into the litter, for the straw is dry and light and enough of the grain is hidden so the birds commence scratching for it almost immediately. At 10 o'clock they are fed in the same way, 2 quarts of wheat and 2 quarts of oats. This is all of the regular feeding that is done.

Along one side of the room is the feed trough, with slatted front. In it is kept a supply of dry meals mixed together. This dry meal mixture is composed of the following materials, viz.:

200 lbs. good wheat bran,
100 lbs. corn meal,
100 lbs. middlings,
100 lbs. gluten meal or brewers' grain,
100 lbs linseed meal,
100 lbs. beef scrap.

These materials are spread on the floor in layers one above another and shoveled together until thoroughly mixed, then kept in stock, for supplying the trough. The trough is never allowed to remain empty. The dry meal mixture is constantly within reach of all of the birds and they help themselves at will.

Oyster shell, dry cracked bone, grit and charcoal are kept in slatted troughs and are accessible at all times. A moderate supply of mangolds and plenty of clean water is furnished. About 5 pounds of clover cut into inch lengths is fed dry, daily to each 100 birds, in winter. When the wheat, oats and cracked corn are given, the birds are always ready and anxious for them and they scratch in the litter for the very last kernel, before going to the trough where an abundance of food is in store.

It is very evident that they like the broken and whole grains better than the mixture of the fine, dry materials; yet they by no means dislike the latter, for they help themselves to it, a mouthful or two at a time, whenever they seem to need it, and never go to bed with empty crops, so far as noted. They apparently do not like it well enough to gorge themselves with it, and sit down, loaf, get over-fat and lay soft-shelled eggs, as is so commonly the case with Plymouth Rocks when they are given warm morning mashes in troughs.

Some of the advantages of this method of feeding are that the mash is put in the troughs at any convenient time, only guarding against an exhaustion of the supply, and the entire avoidance of the mobbing, that always occurs at trough feeding, when that is made the meal of the day, whether it be at morning or evening. There are no tailings to be gathered up or wasted, as is

The Latest and Best Book on Success With Poultry is

999 QUESTIONS AND ANSWERS

By FRANK HECK

THE author claims and proves that this book contains information upon a greater variety of subjects than any book on poultry ever written. It has also drawn out more unsolicited testimonials from authorities and experts. The following are only a few of the hundreds received:

The book 999 Questions and Answers is the best of the kind I ever read. I never saw a book in the same class.—C. L. SMITH, Sec'y Minn. State Poultry Ass'n, Minneapolis, Minn.

The contents of the book takes the place of accumulated files of the various poultry papers and places the information desired in a handy and concise form.—C. G. HINDS, Pres. Amer. White P. Rock Club, Alameda, Cal.

It contains information for all classes and grades of poultry keepers, from judge to novice.—F. O. WELLCOME, Yarmouth, Me.

There are so many nice things in the book and they are so nicely stated that I have taken pleasure in going through it. The unusual quality of the book is that it is full of information for the beginner and it also contains hundreds of things that will be valuable to those of the greatest experience.—T. F. McGREW, Washington, D. C.

The book surely fills a long felt want. Everyone who owns a fowl should also own this valuable book.—AUG. D. ARNOLD, Dillsburg, Pa.

The book will become a very valuable means of information for both old and new breeders, for which they can well afford to pay the price.—JUDGE I. K. FELCH, Natick, Mass.

It contains much of value to the average poultryman, and should meet with ready sale.—JUDGE W. S. RUSSELL, Ottumwa, Iowa

It is a remarkable book to be the product of one man and I heartily congratulate you upon its production.—JAS. SHACKLETON, Milburn, N. J.

Best of all, it is thoroughly practical. I wish it could be placed in the hands of every poultry keeper in the country. If I could not get another copy I would not take $5 for mine.—EDGAR A. WARREN, author of "200 eggs per hen per year and how to get them," Hampton, N. H.

Why worry and wonder and grope in the dark? Why learn by expensive experience and disappointment when everything is offered you at so small a price? The knowledge gained by years of experience is contained in this book. The methods and secrets of the foremost successful breeders and exhibitors in the show room are given in full. The book is for

JUST WHAT HE WANTS.

I am very much pleased with the paper, as there are a number of features that are just what I want.

THE ROYAL BELGIAN NESTS,
J. F. Mann, Prop.
South Auburn, R. I., Oct. 31, 1906.

THE BEST FANCIERS' JOURNAL.

The best fancier's journal, as well as a high-grade advertising medium. It seems to reach buyers. FRED ARTHUR.
Streator, Ill., Aug. 16, 1906.

common, when a full meal of mash is given at night. The labor is very much less, enabling a person to care for more birds than when the regular meal is given.

The average amounts of the materials eaten by each hen during the last year are about as follows:

Grain and meal mixture..	90.0 pounds
Oyster shell	4.0 pounds
Dry cracked bone.....	2.4 pounds
...it	2.0 pounds
Charcoal	2.4 pounds
Clover	10.0 pounds

These materials cost about $1.45.

The hens averaged 144 eggs each.

Succulent Foods and Clover.

Succulent foods are supplied to all birds, each day throughout the year. The double yards allow the birds to gather green grass, young oats, rye or rape for themselves during the growing season, as they are turned from the worn run to the fresh ones, when the supply of green plants is eaten off. If the sod is much broken, or the plants injured so they will not spring up and cover the surface with green again, the vacated yards are cultivated and reseeded heavily.

When buildings are new and the runs are fenced in from land with a good sod on it, the yards may last a year or two without the sod being used up, but unless they are large, it will soon be necessary to cultivate and reseed, if they are depended upon to furnish green food. The yards, 20 by 100 feet, are large enough so that there is room for a single horse to work comfortably in them. It is questionable whether it might not be more economical to construct only single yards for exercise, and feed the hens daily on green food, which could be raised on rich land, handy by. Probably less labor would be required to raise the green food in the fields than in the yards, but the labor of cutting and carrying it to the birds would be considerable.

For green food during winter and spring mangolds are used. They are liked by the birds and when properly harvested and cared for remain crisp and sound until late spring. They are fed whole, by sticking them on to projecting nails, about a foot and a half above the floor. Care must be exercised in feeding them, as they are laxative when used too freely. On the average about a peck per day to 100 hens, can be safely used. They would eat a much greater quantity if they could get it.

A 4 months' feeting test, extending from January 1 to April 30, 1906, in which mangold wurzels were compared with cut clover, has just been completed. Two lots of hens, each consisting of 100, were kept under similar conditions, both lots being fed as described on page 124, except that one lot had about 17 pounds of mangolds each day and no clover; while the other lot received no mangolds, but were given 5 pounds of clover leaves and heads, gathered from the feeding floor in the cattle barns. Both lots of birds had new beds of oat straw every week. The 100 birds eating the mangolds averaged laying 63.9 eggs each, during the 4 months. The 100 birds eating the clover, averaged 59.6 eggs during the same time. The slight difference between the yields of the two lots can hardly be regarded as indicating greater value for the mangold ration.

The vigor and apparent healthfulness of the two lots were equally good. In the general feeding both mangolds and clover are used daily. Formerly it was thought necessary to steam, or wet the clover with hot water in order to get good retults from it. It is now cut and fed dry, in the bottom of cement barrels, cut off about ten inches high. About 5 pounds are eaten daily, by 100 hens, with very little waste. Apparently as good results are gotten from it as when it was scalded; the labor of preparation being very much lessened.

AMERICAN FANCIER
26 Cortlandt Street,
New York City.

Greystone's Black Minorcas and White Rocks

made a sweeping win at Madison Sq. Garden, 1905, 8 1sts out of a possible 10, a record never equaled at the Garden. Grand Central Palace, 7 1sts and 5ds. Rochester. 1904, 4 1sts and 9 regular and specials on Rocks alone. Boston, 1906, Gold special, largest win on both varieties and 20 regular and specials and cup.

Breeders and show birds of the highest quality for sale.

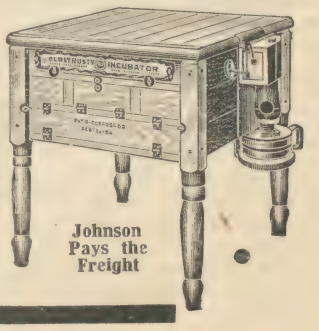
GREYSTONE POULTRY FARM, - - - - YONKERS, N. Y.

F. H. DAVEY, Manager.

Old Trusty

Is the easiest to operate because it runs itself.

I HAVE a good many thousand poultry raisers to back me up on that statement. You know I sold more Old Trusty Incubators and Brooders than any other manufacturer last year.



Yes, I've got them all going. Because I've got the machines; I sell on liberal terms; I aim to deal fair; I don't quibble on little things.

Try 'Til You're Satisfied

Up to three months, if you want to. My guarantee's good for 5 years more, I can't be mistaken about what Old Trusty Incubators and Brooders will do for you—surest hatcher, biggest hatches, least trouble to run, safest brooding. I'm willing to take all the chances while you are testing.

Write for my 1907 catalog. My biggest, best book. I wrote it myself. Full of good poultry pictures and plain, straight talk about poultry raising. Free to everybody.

Johnson Pays the Freight

M. M. JOHNSON COMPANY,
Clay Center, Neb.

The great New York show is now in progress. The best display for quality ever seen in this country. A full report will be published in our next issue, which will be the 15th of January.

* * * * *

The Fancier hereafter will devote four pages to the pigeon fancy instead of two, giving us more time to properly arrange articles, etc., pertaining to our favorites.

* * * * *

Pigeons will take a prominent part in the coming exhibition of the Genesee Poultry, Pigeon and Pet Stock Association, to be held at Rochester, N. Y. In and around this locality there are plenty of pigeon fanciers and the interest displayed by them will produce one of the best displays outside of Madison Square Garden. The Rochester Pigeon Club has been formed and every member is working hard to bring out a grand entry. The Club is in a flourishing condition, and such fanciers as the officers at the wheel, should make a decided success. August Eckert, President; M. Frank Cook, 1st vice president; John Voss, 2nd vice president; Alan F. Hill, treasurer; Herman Irrig, rec. sec'y; Geo. L. Eckhardt, Sec'y. Those desiring premium lists of the coming Rochester show should address Geo. L. Eckhardt, 101 Merrimac St., Rochester, N. Y.

* * * * *

James Glasgow, just back from the Crystal Palace, called at the office of the Fancier the last week. Was indeed glad Billy Stanton came along to introduce us, although we have known James for ten years. We wouldn't have recognized him in his new attire, consisting of an overcoat of loud design purchased in Scotland.

It was interesting to hear an American's idea of the quality exhibited at the great Crystal Palace Show. We have seen and handled a goodly number of these noted winners and must say with a few exceptions were disappointed.

Pigeons on the other side bring fabulous prices (that is, birds of merit), added to this the cost of importing and you quality which in most varieties could be duplicated for less than half, but then you would not have the word imported in the pedigree, and we are sure that is worth just a little —plenty think so, at any rate.

We will try and arrange an article to be published in the Fancier shortly by Mr. Glasgow on what he saw at the Palace, as we are sure it will be most interesting reading to all of us.

THE ST. LOUIS HOMING PIGEON CLUB.

A new racing pigeon club was organized Dec. 16. We will fly under the auspices of the National Association of America Homing Pigeon Fanciers.

This is one of the strongest new clubs that was ever organized in St. Louis. We have more of the leading fanciers than either one of the two older clubs. We will have at least 60 birds, if not more, to fly, in the old bird races in the spring. This is a large number when you consider that some of the members haven't any old birds. The following officers were elected for the ensuing year. C. J. Sadler, president; J. Parkinson, vice president; N. Plegge, treas.; V. C. Harwood, sec'y and race sec'y. The race committee will be appointed at the next meeting. With three clubs flying pigeons in St. Louis next year, we should have some exceedingly fine sport. We would be pleased to hear from anyone in St. Louis and vicinity, interested in racing pigeons, and wishing to join the club.

V. C. HARWOOD, Sec'y.
3801 Shaw Ave.

CRYSTAL PALACE AWARDS.

GRIZZLE—Cockerel (7): 1, Wright, good skull and body-shape, well broken in feather, fails slightly in wattle formation and is light in eye and cere; 2, Shaw, we preferred to win, wide skull, fine damson cere, good color, stout beak, good wattle and shape, just a shade dull in eye; 3, Falkner, blazing eye, stout beak, beaten in color and straightness of face; 4, Wright, first-rate substance of beak, fairly good color and skull formation, lacks fire in eye and too full at throat; empty, Fletcher. Hen (7): 1, Wright, capital skull formation and strength of beak, good eye and cere, fails in under-color; 2, Wright, stout well-set beak, fairly good skull and top-color, has rather too much cere and is short of wattle; 3, Tattersall, bright eye, A1 substance of beak, fine hard cere, a bit patchy in color, and wants filling out; 4, Flanagan, finely-worked damson cere, good eye, slightly flat on top skull and pointed in beak; r, Ambrose, rare substance of beak, nice dark cere, carries too much feather; hc, Moody, fairly good skull formation and color of iris, fully long in face; Falkner, capital shape, very pale in eye and cere, the old champion. CHEQUER—Cock (13): 1, Tattersall, capital skull formation, quality of wattle and shape of body, little light in eye and cere and pointed in beak; 2, Ormerod, stout beak, good eye and cere, a bit bronzy in color, beaten in skull and wattle; 3, Fletcher, bright eye, capital shape and condition, good color, too long drawn out; 4, G. and J. Smith, good color, stout beak, short in face, too stoppy in front; r, Fletcher, first-rate skull and shape of body, short of wattle; hc, Tattersall, stout beak, good skull and eye, faulty in color; Tattersall, fairly good in eye and cere, open in markings, stout beak, lacks depth of skull; hc, Wood and Son, capital color, eye and cere, coarse in wattle and pointed in beak; Rogers, straight in face, stout, fully long, a shade dull in eye and coarse in wattle. Hen (9): 1, G. and J. Smith, good shape and substance of beak, a bit soft in cere and not quite sound in her black; 2, Fletcher, brilliant eye, stout beak, straight in face, fails slightly in quality of wattle and clearness of markings; 3, Wood and Son, very stout beak, fine hard cere, faulty in her black, a shade dull in eye and necky; 4, Brannam, A1 strength of beak, lacks desired straightness of outlook and is dull in eye; r, Ormerod, fairly good skull formation and substance of beak, fails in front and is a shade pale in eye and cere; hc, Dilworth, dense in markings, first-rate skull and beak, lacks bloom; Fletcher, cobby in build, correctly-formed skull, good color and markings, fails slightly in wattle formation, nevertheless should have won; Tattersall, good skull and beak substance, soft in cere and dark in color. RED or YELLOW—Cock (12): 1, Stacy, rare substance of beak, first-rate skull and color, good wattle, wins well; 2, Stacey, bright eye, wide skull, good wattle, strength and set-on of beak, a bit soft in cere; 3, Stacey, sound color, A1 substance of beak, beaten in wattle formation and length of face; 4, Webster, short face, short well-set beak, hollow in centre of wattle and faulty in eye and cere; r, Bastard, capital eye and strength of beak, failing in wattle formation; hc, Moores, wide wedge skull, beaten in color of iris, and again faulty in wattle; Bastard, stout beak, good skull, not quite straight in face; Tattersall, good substance of beak, sound color, light in eye and coarse in wattle; Ross, a fairly good-colored red. Hen (10): 1, Stacey, cobbily-built yellow, typically forward skull, well set beak, good eye and color; 2, Stacey, stout beak, sound color, neat wattle, a little flat on top-skull and faulty in cere formation and color of iris; 3, Moores, capitally-formed skull, good beak substance and color, fails in wattle; 4, Stacey, good skull, a shade light in eye and flat in wattle; r, Webster, cobby, first-rate skull formation, lacks finish of beak and wants more wattle; hc, Bastard, nice style, little long in face; Tattersall, stout beak, lacks brightness of iris and is too long; Moores, wants more power, otherwise fairly good. WHITE—Cock (8): 1, Hewitt, short in face, stout beak, little coarse in wattle and carries rather too much feather; 2, Benns, hard cere, good skull formation, beaten in substance; 3, Hewitt, finely-worked cere, neat wattle, stout beak, could do with less feather; 4, Benns, capital strength of beak, beaten in wattle formation and straightness of face; r, Benns, flat on top and too long; hc, Hewitt, Ive. Hen (11): 1, Benns, fairly good wattle and skull formation, stout beak substance, close up; 3, Benns, fairly good skull formation and strength of beak; 4, Hewitt, faulty in wattle and fully long in face; r, Hewitt; hc, Petfield, Benns; empty, Hinde. A. O. C.—Cock (9): 1, gold cup, Ambrose, the famous silver chequer, once more in the van; 2, Wright, red chequer, fairly good color, brilliant eye, stout beak, just a wee bit coarse in wattle, and is not quite straight in face; 3, Ambrose, silver chequer, a chip off the old block, at least with regard to size, good skull, and set in of beak, in good order; 4, Ambrose, silver chequer, another chip, good eye and strength of beak, contemplating a downward career; r, Falkner, silver chequer, of good stamp, bright eye, good top skull, a bit downy; hc, Fletcher, nice eye and good markings, but sparse, silver chequer; Ambrose, rather coarse silver chequer. Hen (7): 1, Ambrose, capital silver chequer, good skull, eye, beak, substance and shape, nice quality; 2, Dilworth, red chequer, fairly good color, nice damson cere, slightly pointed in beak, and coarse in wattle; 3, Wright, red chequer, first-rate color, eye and strength of beak, fails in outlook; 4, Ambrose, bright eye, stout beak, faulty in skull formation, silver chequer; r, Ambrose, shapely, good-eyed silver chequer, weak in beak; hc, Wright, red chequer, fairly good skull and color; BRED '05, Blue—Cock (14): 1, Wright, straight in face, stout beak, good eye and color, hard damson cere, capital skull formation, a bit narrow in bar, and long in neck, rightly placed; 2, Wright, blazing eye, good skull formation and beak substance, sound color, neat wattle, rather too much cere, and long in feather; 3, Fletcher, well-set beak, of good substance, finely-worked cere, good color and skull, might be brighter in eye; 4, Wright, stout beak, first-rate skull formation, good eye and cere, short in feather, failing somewhat in bar; r, Grant, shapely, A1 strength of beak, slightly flatness on top skull, and narrow in bar; vhc, Tattersall, brilliant eye, good skull and beak substance, soft in cere; Harvey, capital body shape, short in face, lack brilliance of iris; G. and J. Smith, cobby in build, good eye and color, shade pale in cere, and pointed in beak; hc, Gatty, well- set beak, good eye, faulty wattle formation; G. and J. Smith, stout beak, good shape and color, not quite straight in face; Walker, capital substance of beak, bright eye, long in face and neck. Hen (19): 1, Wright, first-rate skull formation and beak substance, sound color, A1 shape, neat wattle, well placed; 2, G. and J. Smith, good quality, well-formed skull, stout beak, nice eye and shape; 3, Wright, rare good skull, nicely proportioned all through, fails a little in bar; 4, Tattersall, plenty of substance, bright eye, slightly flat on top, and might be better in color; r, Gatty, capital substance of beak, failing in finish of skull and length of feather; vhc, Tattersall, good eye, stout beak, wants depth of skull, and is not the best of color; Mitchell, first-rate skull, eye and cere, wants beak power; Wright, nice eye and beak substance, might be better in skull, and is too reachy; hc, Ambrose, capital shape and make, good eye and strength of beak; Mitchell, short in feather, stout, well-set beak, faulty in skull formation; Flanagan, good substance of beak, failing in color and bar; Bagley, fine dark cere, stout beak, quite long enough in face and feather; Fletcher, nice style, failing in skull formation; Walker, good shape and substance, not quite straight in face. SILVER—Cock (6): 1, Alex. Wright cup, medal, Tattersall, bright eye, good color and shape, capital skull formation and strength of beak, in the pink of condition; 2, Tattersall, very stout beak, good bar, eye and cere, fairly good wattle and build; 3, Grant, first-rate headpiece, moderately even in color and bar, somewhat coarse in wattle; 4, Grant, fine damson cere, nice stamp, wants strength of beak; r, Falkner, stout, well-set beak, fairly good color and bar. Hen (6): 1, Tattersall, best wattle formation, good eye, cere and skull, fails color; 2, Tattersall, bright eye, stout beak, not equal to winner in quality of wattle, and again faulty in color; 3, Grant, beaten in skull formation and color of iris; r, Tattersall; too late, Smith. GRIZZLE—Cock (8): 1, Wright, stout beak, well set, brilliant eye, fine cere, fairly good color; 2, Wright, capital skull and eye, nice damson cere, short in face, fairly even in color, too long in feather; 3, Kelday, cobby, good skull, well broken in color, scarcely so good in eye as first and second, and is again long in feather; 4, Dilworth, stout beak, good eye, a bit patchy in color, and slightly flat on top; r, Shaw, good skull and cere, lacks fire in eye, and runs slightly under; hc, Edgar, fairly good skull, fails in color of feather and iris. Hen (7): 1, Wright, capital skull formation and strength of beak, good eye and nice dark cere, fair color, carries too much feather; 2, Lord, good skull, stout beak, fine damson cere, dark top color and light underneath, too feathery; 3, Boyd, first-rate skull, beaten in color of iris and strength of beak; 4, Falkner, excels in beak substance, fiery eye, fails in wattle formation and set-on of beak; r, Pitfield, plenty of substance, but lacks quality. CHEQUER—Cock (14): 1, Fletcher, fine quality wattle, stout beak, brilliant eye, hard damson cere, good skull, rather dense in markings; 2, Ormerod, A1 substance of beak, good style, lacks fire in eye and is pale in cere; 3, Ormerod, stout beak, nicely marked, failing in quality of wattle and color of iris; 4, Wood and Son, good shape and markings, slightly flat on top skull, and a shade dull in eye; r, Webster, stout beak, good skull and shape, beaten in quality; vhc, Tattersall, capital skull, eye, set on of beak, faulty color; Wood and Son, fairly good skull formation, rare substance of beak, too long drawn; Grant, short in face, nicely-worked cere, coarse in wattle, and lacks brilliance of iris; hc, Grant, good eye and cere, fails in quality of wattle, and is a little flat in skull. Hen (16): 1, Tattersall, rare substance of beak, fairly good skull and color, a bit faulty in cere formation, and inclined to flatness of top skull; 2, Grant, stout beak, good skull, finely-worked damson cere, short in face, moderate good wattle, a little too long; 3, G. and J. Smith, well marked, good beak substance and shape, not quite straight in face; 4, Russell, capital skull formation, bright eyes, stout, well-set beak, faulty in her black; r, Fletcher, good skull, beak substance and wattle, pale in cere and necky; vhc, Rogers, capital shape and markings, good eye and beak substance, a bit flat on top skull; hc, G. and J. Smith, stout beak, not quite straight in face; Wood and Son, nice dark cere, good beak substance, slightly pointed in beak and long in feather; Dilworth, first-rate shape and strength of beak, lacks fire in eye; Fletcher, good skull, color and markings, fails somewhat in wattle formation and build; Littleton, fine dark cere, stout beak, not quite straight in front. Red or Yellow—Cock (14): 1, Stacey, stout beak, good quality wattle, short in face, sound color, fairly good skull formation, has rather too much cere; 2, Stacey, capital skull and color, good eye, scarcely so stout as winner; 3, Stacey, for structural formation an easy winner, fine quality wattle, very light in one eye; 4, Dyer, stout beak, good eye, color and shape, lacks desired straightness of outlook; r, Webster, good eye, skull and substance of beak, not the quality of winner; vhc, Tattersall, cobby, stout, beaten in color of iris and set-on of beak; hc, Tattersall [2], Bagley, capital eye and strength of beak, rather long in face; Webster, stout, good eye and skull, a bit downy. Hen (13): 1, Tattersall, fairly good skull formation and color, stout beak, bright hard cere, in nice form; 2, Bastard, very stout beak, well-formed skull, fairly even in color, short of wattle, and a shade dull in eye; 3, Stacey, bright eye, little flat on top skull, and wants beak power, moderately good in color; 4, Moores, straight face, good substance of beak, fails in color of iris; hc, Tattersall, fairly good color, wants beak power; Smith, loses in formation of skull and richness of color; Moores, capital skull and beak, fails in evenness of color; Tattersall, too long in feather, otherwise fair; Bastard [2]. BRED '06, Blue—Cock (24): 1, Wright, wide skull, bright ruby eye, stout beak, fine cere, sound color, little long in feather; 2, Tattersall, first-rate eye and beak substance, good top skull, fails somewhat in front; 3, Dilworth, capital skull formation, well-set beak, not so good in eye as first and second, and is just a little soft in cere; 4, Tattersall, fine cere, good eye and strength of beak, beaten in wattle formation, and is a shade pale in color; vhc, Grant, fairly bright in eye, stout beak, good skull and shape, carries too much feather; Wright, stout, well-set beak, fiery eye, hard damson cere, sound color, faulty in wattle formation; hc, Flanagan, fairly good skull and beak substance, shade dull in eye; Mitchell, moderate in skull formation, nice eye and cere, rather too long in face and neck; Wright, dips too much in front, and has an ugly wattle, beautiful eye and cere, sound in color; empty, Cunningham. Hen (27): 1, Wright, splendid headpiece, lovely eye, fine quality cere, well-set beak, fails in bar and length of feather; 2, Wright, another typical hen, capital skull formation, beak substance and color of iris, same feather fault; 3, G. and J. Smith, first-rate skull formation, stout, well-set beak, lacks brilliance of iris; 4, Wright, fiery eye, hard, dark cere, pinched slightly in front, and is weak in bar; r, Mitchell, stout beak, good skull and set on, dull in eye and long in feath-

er; vhc, Gatty, stout beak, good eye, little too long in face and feather; Tattersall, first-rate strength of beak, bright eye, A1 shape of body, fails a bit in front; Mitchell, good eye and beak substance, again too much feather; Marshall [2], fairly good skulls, rich bright eyes, both too long in face; hc, Flanagan, stout, well-set beak, fiery eye, again a trifle long in face; Grant, good eye and strength of beak, too long in feather; Flanagan, fails in skull formation, otherwise good; Thornton, faulty in color of eye and set-on of beak. Silver—Cock (9): 1, Tattersall, good skull and beak substance, nice eye, failing somewhat in color and bar; 2, Grant, capital color, good eye, beaten in skull formation; 3, Grant, fairly good skull and beak substance, color, and bar; 4, Grant, bright eye, too long in neck and feather; r, Tattersall, fails in beak substance and wattle formation, fair skull and color; vhc, Tattersall. Hen (8): 1, Tattersall, stout beak, moderately good in skull and color; 2, Grant, good eye and strength of beak, slightly flat on top skull and down face; 3, Grant, not quite so stout, and has same failings; 4, Grant; r, empty, Tattersall. Grizzle (12): 1, Rouch, the Dairy and Manchester winner, good color, skull and beak substance, lacks desired outlook; 2 Tattersall, stout, well-set beak, fine dark cere, a little flat in wattle and dull in eye; 3, Wright, fairly good skull formation and strength of beak, dark on saddle and dull in eye; 4, Tattersall, fairly well broken in color, stout, carries too much feather; r, Rouch, fairly good color, stout beak, fine damson cere, coarse in wattle and dull in eye; vhc, Falkner, A1 strength of beak, bright eye, fine cere, not quite straight in face, and a bit patchy in color; hc, Ambrose, stout beak, good color, nice dark cere, dull in eye and long; Kelday, too high in leg, and downfaced, fairly good skull and substance of beak; Shaw, stout, and again fails in outlook. Hen (14): 1, Wright, capital skull formation, eye, and color, rather too much feather, and patchy in color; 2, Webster, straight in face, fairly good color, too long all through; 3, Wright, first-rate eye and strength of beak, not quite straight in face; 4, Tattersall, fairly stout and straight, but long in face; r, Thornton, capital skull and color of iris, faulty cere formation; vhc, Ambrose, rare substance, fairly well broken in color, good eye; Walker, first-rate skull, dark in color, and lacks fire in eye; Wright, good style and substance, a bit downfaced; hc, Walker. Chequer—Cock (24): 1, challenge, and medals, Tattersall, well marked, bright eye, finely-worked cere, stout beak, short and cobby; 2, Page, wide skull, stout beak, good eye, color and cere, just slightly pointed in beak, runs winner very close; 3, Dilworth, very stout beak, nice ruby eye, somewhat coarse in wattle and long in feather; 4, Tattersall, capital formation and shape, not the quality of those above him; r, Fletcher, A1 substance, fails a bit in brilliance of iris; vhc, Wood and Son, fine dark cere, thick beak, just a shade dull in eye; Ormerod, stout, good headpiece, rather dark in color; Tattersall, sparcely marked, nice substance, and fiery eye; Shaw, faulty in setting of beak, moderate skull, bright eye; Fletcher, fully long in face; hc, G. and J. Smith, Tattersall, Rogers, Littleton. Hen (25): 1, Fletcher, Dairy challenge winner, and might have held same position here, proportionately stout in beak, good eye, finely-worked cere, A1 shape and color; 2, Fletcher, a good hen, stout and shapely, but not equal in quality to her loft companion; 3, G. and J. Smith, bright eye, fair skull and beak substance; 4, Page, much better than third, and should have changed places; r, Bridges, stout, but lacking in quality; vhc, Tattersall, Dilworth, Allen, Fletcher [2]; hc, G. Johnston. Red or Yellow—Cock (23): 1, Stacey, capital skull formation, depth of color and strength of beak, good eye and quality of wattle; 2, Stacey, built on similar lines, and rich and even in color; 3, Stacey, sound color, stout beak, beaten in front and color of iris; 4, Stacey, rare substance of beak, fairly good eye, not yet fit; r, Moores, well-set beak, fails in color of iris and length of feather; vhc, Stacey 2, Bastard, fairly good skull, little light in eye and faulty beak setting; hc, Webster, Bastard. Hen (22): 1, challenge cup, Stacey, very rich color, stout beak, fails somewhat in beak setting, color of iris and width of skull, nevertheless an easy class winner; 2, Bastard, good type and substance, lacks bloom; 3, Stacey, sound color, beaten in depth of skull; 4, Stacey, bright eye, straight face, flat in wattle; r, Stacey; vhc, Stacey [2], Moores, Smith, Bagley; hc, Bristow, Moores. White—Cock (12): 1, Hewitt, stout beak, good skull, short in face; 2, Hewitt, fair headpiece, fails in beak-setting to winner; 3, Hewitt, again plenty of substance, but faulty in formation; 4, Keys, too flat on top skull; r, Benns; empty, Hinde. Hen (10): 1, Benns, capital skull and set-on of beak, fully long in face and feather; 2, Hewitt, stout, good front, fails in wattle; 3, Hewitt, good top skull, pointed in beak; 4, Benns, fair head and beak substance; r, Ive; empty, Hinde. A. O. C.—Cock (8): 1, Wright, red chequer, brilliant eye, hard damson cere, good color and strength of beak; 2, Ambrose, silver chequer, capital head, eye and beak, fails in color; 3, Fletcher, silver chequer, short in face, stout beak, slightly flat on top of skull; 4, Dilworth, solid-colored red chequer, very stout, but coarse; r, Falkner, red chequer, stout beak, fine dark cere, fails in set-on of beak; vhc, Fletcher. Hen (5): 1, Wright, red chequer, good color, eye and cere, little long in face; 2, Ambrose, silver chequer, fairly good in head points, not compact enough in build; 3, Ambrose, red chequer, stout and straight in face, a bit washy in color; 4, Fletcher, silver chequer, neat head, nicely-marked, faulty in color; r, Fletcher, silver chequer.

ANTWERPS (judge, Mr. Powell).—These classes were guaranteed by the Southern Branch of the Antwerp Club, and although the classes were rather more restricted than formerly, yet the number of entries, which totalled thirteen a class, cannot but be considered rather gratifying to the promoters and the judge. The quality, too, was very good all round, and it was significant that the short-faces held their own against the mediums and longs, and this fact should not be forgotten in the future, but should lead to the extension in the classification so far as this sub-variety is concerned. The medal presented by the society for the best Antwerp was awarded to Mr. Driver's young medium red chequer han.—BRED PRIOR TO '06—Cock (13): 1, sp., and certificate of merit, Phillips, m. red chequer, in grand condition, massive in skull, good sweep and back skull, broad full front, might be a little stronger in beak, but wins well, occupied same position at the Dairy Show; 2, Driver, the winning short cock at the Dairy, youngish, but making up remarkably well, very massive, full fronted, stout in beak, rather full wattled; 3, Driver, m. red chequer, with capital sweep, enormous back skull, lacks substance of beak and strength of face, and hardly yet in full condition of feather; 4, Ward and Clegg, l. f. dun, rare length, massive skull, very stout black beak and extensive back skull, a bird we liked much, and will soon be hard to beat; r, Challenger, m. red chequer, of grand type, capital sweep, very stout in beak, wants a little longer to perfect in substance of skull; vhc, Taylor, deep-colored short red chequer, good sweep and substance of head, could do with a little more beak substance; Milledge, a big-headed m. dun, nice sweep and back skull, a trifle fine and open in beak; hc, Chase, a good-colored, short-faced red chequer, massive in skull and good front, a trifle fine in beak and coarse in cere; Clark, m. dun, good sweep and back skull, rather fine and open in beak; c, Wright, light red chequer, stout in beak, fair substance and back skull, fails in frontal; Machin, m. dun, good sweep and back skull, fair substance of beak. Hen (12): 1, sp., certificate, Mawson, light red chequer, long face, in grand hard condition, good long sweep, height, and massive back skull, very stout beak, shows to much better advantage here than at the Dairy, where she also won; 2, Driver, deep-colored red chequer, long face, good sweep and substance, extra stout in beak, not so massive in face; 3, Challenger, rather small m. dun, good sweep and substance of beak, loses in substance of skull and face; 4, Clark, m. dun, good sweep, back skull, and stout beak, fails a little in fullness and strength of face; r, Driver, a very massive high-skulled m. dun, rare sweep, wide and full front, stout black beak, must have run the winner very closely; vhc, Machin, stout-beaked m. dun, good sweep and back skull, hardly so massive in head; Taylor, short-faced red chequer, stout, solid skull, good sweep and frontal, wants a little more beak substance; hc, Machin, short cobby-headed red chequer, wants more power of beak; Milledge, massive-headed m. dun, stout in beak, rather weak in face. BRED '06—Cock (13): 1, sp., certificate, Driver, light red chequer, m., fair sweep and back skull, but lacks substance of head and beak; 2, Bowles and Whitfield, l. f. dun, good sweep, substance of head, beak and black skull, our choice for winner; 3, Mawson, very massive headed red chequer, full front, and rare width and back skull, a trifle low on crown, very young, but shows great promise; 4, Fuller, long dun, strong in jaw substance of head and back skull, very stout white-tipped beak, drops a little behind the wattle; r, Clark, l. f. red chequer, of good substance, and rather stout well-fitting beak, too straight in face; vhc, Wright, very stylish medium dun, good sweep and back skull, lacks substance throughout; Taylor, a massive-headed m. red chequer, capital sweep, full front, and very stout black beak, might well have stood higher; Spencer, a stout-beaked medium red chequer, not yet through the moult; hc, Wright, stylish m. dun, fair substance of head and beak, fails in frontal; Ward and Clegg, massive-headed stout-beaked m. dun, rather down-faced, and lacks frontal. Hen (11): 1, medal for best Antwerp, sp., certificate, Driver, a capital-fronted red chequer, m., grand sweep, height, and stout well-set beak, might be better in color and more massive in skull, the Dairy medal winner; 2, Mawson, very massive headed s. f. dun, making up remarkably well, very stout beak, broad front, rare strength of back skull, wants a trifle more in front; 3, Bowles and Whitfield, very massive broad-fronted light red chequer, stout well-fitting beak, fails a little in skull formation; 4, Clark, very young light red chequer, m., fair substance, too straight in face; vhc, Taylor, a rather small good-colored red chequer, c. f., good sweep and beak, wants substance; hc, Ward and Clegg, massive-headed medium, good sweep and frontal, very stout beak; Milledge, massive-headed stout-beaked long dun, too straight in face; Spencer [2], short and m. red chequers, of good substance, both straight in face.

ARCHANGELS (judge, Mr. Wiltshire) were a grand display, about the best that has ever been brought together, many good birds having to be content with honor cards.—Cock ( ): 1, medal, Webb, lovely bronze, good back and shoulders, in fine condition, wins well; 2, Leigh Lye, capital bronze, good back and shoulders; 3, Berry, very lustrous, nice under-color, not good in peak: r, Dell, sound color; vhc, Brown [2], very rich backs; Berry; hc, Leigh, Lye, Webb, Brown, Wichello. Hen ( ): 1, Allen, good green back, black tail, nice bronze, good peak; 2, Leigh Lye, nice shoulders, good head and neck bronze; 3, Brown, very lustrous shoulders and back; r, Webb, very lustrous; vhc, Maurice, Webb, Dell; hc, Leigh, Lye, Webb, Brown, Newman, Whichello, Berry, Cooper: good class. BRED '06.—Cock: 1, Webb, grand lustre, green back, good peak and bronze, must have made a close run for the cup; 2, Allen, green back, black tail, and good clear bronze; 3, Berry, good shoulders and back, bad in under-color, should have given way to same owner's vhc (medal Dairy), a grand bird all through: r, Berry; vhc, Dell [2], good, Berry [2], Cooper; hc, Leigh, Lye [2], Webb [2]. Hen: 1, medal, challenge cup, Berry, a sweet hen, hard to find fault with, might be better on back; 2, Berry, good green back, little blue in tail, fails to winner in under-color; 3, Berry, best back of the lot, bit light in tail, bad peak; r, Leigh Lye, good bronze; vhc, Webb [2], Leigh Lye; hc, Dell, Leigh Lye, Battleday. SELLING, 2 pounds: 1, Dell, very good lustre; 2, Stark, very moderate, several in class much better; 3, Copper, nice bronze hen; vhc, Webb, one of the best; Allen; hc, Maurice, Rose, Webb, Berry, nice shoulders and back, might have won.

JACOBINS (judges, Messrs. Hills and Burnett).—The society held its annual club show here, and ensured their usual large classification. They were an excellent collection all round, and the quality was no doubt the very best that could be brought together. They were excellently well staged in their usual place. No special prize cards were up at the time of leaving at 5:30 p. m. Tuesday.

SHOW HOMERS (judge, Mr. Williams) had its usual classification, fourteen classes being provided, and they brought together an excellent collection, the quality of which was also of a very high order. BLUE or BLACK Chequer or Chequer Pied—Cock (8): 1, Cory, dense-colored black, stout well-set beak, nice wattle, stout face, good skull, nice form, rare substance and quality; 2, Stevenson, black chequer, nice beak, stout face, good skull, nice eye, fine cere, short and cobby, very fit; 3, r, Austin, very stout beak, good face and skull, black chequer, both of nice quality, and fit, of which we preferred the latter; vhc, Christmas, capital-skulled blue chequer, very fit, nice quality; hc, Wignall. Hen (9): 1, sp. for best old Homer in show, Austin, this was the unnoticed Dairy black chequer we fancied there, she has a stout well-set beak, capital shape of wattle, long broad full face, good skull, eye and cere, wins well here; 2, King, bold blue chequer, nice beak, good full face, rare skull, eye and cere, very stout and cobby; 3, Cory, black chequer, a shade on the short side, but nice substance and quality; r, Cory, stout faced and skulled black chequer, nice quality; hc, Christmas; pen 8951, Austin, stout beak, good face and skull, blue chequer, the Dairy winner, might have been second here. A. O. C. Chequer or Chequer Pied—Cock (8): 1, Jones, the reserve Dairy red chequer, our choice there, wins well here; 2, Christmas, we think is the Dairy third red chequer, looking very fit, nice substance and quality; 3, Bode, we missed, or chose pen 8957, Halley, the Dairy winner, as we said, short in face, but nice substance; r, Joyce, red chequer, nice form; vhc, Evans, stout beak, good face and skull, yellow chequer. Hen (13): 1, Jones, long stout-faced good-skulled dun chequer, a shade fine in beak, but nice substance and quality; 2, Austin, the Dairy winning dun chequer, great length and substance, and nice quality, our choice to-day; 3, Stevenson, a grand quality silver chequer, just on the fine side; r, Halley, stout beak, good face and skull, dun chequer, nice trim; pen 8966, Jones, the last year's winning dun chequer, without a card, and looking very fit, we liked for second place. A. O. C.—Cock (4): 1, 2, Austin, capital blues, nice substance and quality, of which we much prefer the latter; 3, Christmas, a bit course, but stout beak, face and skull, also a blue. Hen (10): 1, Sharp, black barred silver, nice well-set beak, good wattle, capital face and skull, grand trim; 2, r, Austin, the blue we fancied at the Dairy, rare substance and quality, our choice here, reserve grand-skulled hen; 3, Boyd, looks like the first Dairy black barred silver hen, nice quality bird and fit, a shade fine; vhc, Burgess, a very nice skulled blue, rare substance, and fit; c, Sharp. BRED '06, Blue or Black Chequer or Chequer Pied—Cock (16): 1, 2, Austin, a pair of excellent black chequers, stout-beaked, good wattle, long full faces, capital skull, eye, and cere, nice shape and feather, wins well; 3, Worsley, black chequer; vhc, Joyce; hc, Wignall; pen 1991, Halley, the dense black chequer passed at Paisley in the hen class. Hen (17): 1, medal, Austin, the Dairy medal winning black chequer, grand length, substance and quality, just a shade fine in beak, but wins all right here; 2, Christmas, black chequer, stout beak, capital face and skull, nice quality and substance, nice form; 3, Scott, grand black chequer, nice substance and quality, very fit; r, Roberts, black chequer, stout beak, good face and skull, nice order; vhc, Boyd; hc, Mawson, Prichatt. A. O. C.—Cock (6): 1, Joyce, red chequer, nice beak, stout face and skull, nice substance and quality, very fit, though we fancied 2, Christmas, also red chequer, nice well-set beak, good wattle, face and skull, good size and fine in cere; 3, Cory, rather nice red chequer, nice substance and quality; we liked r, Jones, stout face and skull, red chequer; vhc, Baker, Bode. Hen (13): 1, Joyce, blue chequer, stout beak, nice wattle, face and skull, good eye and fine cere, rare body, shape and feather; 2, Jones, silver chequer, stout beak, good wattle, long stout face, good skull, nice eye and cere, good body and shape; 3, Taylor, yellow chequer, stout face, nice skull, body and shape, rich color, shade, fine in beak; vhc, Cory, Singleton, Bode; hc, Bode; pen 9038, Fuller, empty; and pen 9,028, Jones, no card, a stout face and skulled red chequer, we liked. A. O. C.—Cock (10): 1, Sharp, blue, stout beak, good face and skull, grand form, looking well; 2, Jones, mealy, nice beak, good face and skull, nice form, rare substance; 3, Austin, black barred silver, stout, beak, well-set beak, good wattle, face and skull, rare quality; r, Chandler, mealy, nice beak, good face, skull and fit; vhc, Hutchins, Mosely, Sharp; empty, Bode. Hen (12): 1, Scott, blue, nice beak, wattle, good long face, nice skull, nice shape and feather; 2, Fuller, very nice black barred silver, nice beak, good wattle, face and skull, nice trim; 3, hc, Sharp, a pair of very nice hens, third was the Scottish Homer Club second, stout beak, good face and skull, smutty blue, and the hc was the Scottish champion blue hen, a bird of nice substance and quality; r, Hutchins; vhc, Baker; hc, Moseley, Roberts. SELLING, 5 pounds (14): 1, Hawksley, black chequer, nice quality, but too fine; 2, Hopkins, black chequer, stout beak, nice face and skull; 3, Chandler, very nice headed black barred silver hen; r, Scott; vhc, Cory, Hayles, Pitchford, Rodgers; hc, Moseley. 2 pounds (13): 1, Gordon, dun chequer, stout beak, good face and skull, nice trim; 2, Townsend, nice beak, good wattle, face and skull; 3, Maynard, black chequer, stout face, nice eye and cere; r, Rodgers; vhc, Raymond, Gordon, Kilby; hc, Hopkins; empty, Childe.

Hen (14): 1, Walton, jun., capital blue chequer, rare body, shape and feather, this makes her third successive win at the Palace; 2, Rhodes, very smart and taking red chequer; 3, Cooke, good body, rare shape and feathered blue chequer pied; r, Dimond, nice red chequer; vhc, Wilson Bros., Rimmer, Adams; hc, Farthing, Ward; c, Vincent. BRED '06, 75 Miles—Cock (17): 1, sp., Wilson Bros., good body, feather, and shaped mealy, nice form; 2, sp., Cooke, powerful blue chequer pied, rare shape; 3, Hughes, good body and shaped mealy, nice form; 4, Vincent, nice red chequer, good order; r, Sayers; vhc, Farthing, Nicol; hc, Bollam, Nuther, Wylie. Hen (14): 1, sp., Vincent, blue chequer, capital body, rare shape and feather, wins quite easy; 2, Wilson Bros., blue chequer, good body, rare shape and feather, nice form; 3, Hughes, very smart black chequer; 4, Cooke, nice body, shape and feather, blue; r, Nuther; vhc, Price.

CUMULETS (judge, Mr. M. Willan Dent) were indeed a very nice collection, both the quality and numbers being extra good and were well staged.—Bred Prior to '05—Cock (10): 1, 2 Veen, first was a nice, long, straight face, good top skull, nice eye, and fine in cere, he has a nice chuck, good body, nice shape and feather, very fit, second pure white, nice face and skull, capital eye, fine cere, in splendid trim; 3, 4, Leech, a very nice pure white, third, good head, eye and cere, may be a bit thick in neck, nice trim; fourth nice quality, but a shade fine; vhc, Davies, Fairhurst; hc, Davies; empty, Ewing. Hen (9): 1, 2, 4, Leech, first gem, pure white, nice face and skull, good eye, fine cere, grand shape and style, second white, nice fine head, good eye and cere, nice shape and feather, fit, fourth nice head, fine in cere, good shape and feather, A1 form; 3, Veen, long, fine face, good head and eye, nice shape and feather, tip-top form; r, Lomax; vhc, Wilkinson; hc, Davies. Bred '05—Cock (6): 1, 4, Whitfield, first pure white, nice long head, good eye, fine in cere, nice shape and feather, fourth ticked, good head and eye, fine cere, rare shape; 2, Ewing, nice head, eye, and cere, good shape and feather; 3, Veen, very nice-headed, white, snade fine; vhc, Leech. Hen (8): 1, sp., Leech, splendid head, nice eye, good body and shape, very fit; 2, Ewing, nice quality and very fit, may be a shade fine; 3, vhc, Veen, nice face and skull, good eye and cere, in A1 trim; 4, Davies, nice, fine face, good skull, nice shape and feather; vhc, Lomax; hc, Sinkinson. Bred in '06—Cock (16): 1, 3, Veen, a really good pair, nice heads, fine eye and cere, grand shape and feather; 2, vhc, Whitfield, nice, long face, good head and eye, fine cere, rare shape and feather; 4, Ewing, nice face and skull, good eye and cere, rare shape, nice trim; r, Davies; vhc, Whitfield, Smith. Hen (15): 1, sp., Carr, grand, sweet-headed blue, nice eye, fine cere, rare shape and feather, nice form; 2, 3, r, Veen, a splendid trio, all of nice quality, and well selected; 4, Davies, nice head, eye and cere, good body and shape, A1 form; vhc, Leech; empty, Fairhurst. Selling, 1 pound (11): 1, Ewing, good head, nice eye, fine cut; 2, vhc, Fairhurst, very nice, A1 form; 3, Leech, very cheap, nice headed white; 4, Davies; r, vhc, Veen.

LONG-FACED TUMBLERS (judges, Messrs. Briggs, Dunks and Stone).—These made a grand show, and brought out the elite of the Fancy, some 390 being penned.—BALD, Black, Silver, or Chequer.—Cock: 1, sp., McHardy, a really, grand headed and eyed pigeon, good shape and color, little foul thighs; 2, Partridge, lustrous black, nice cut and eye, not the substance; 3, Bright, silvery blue, only moderate; we thought pen 7559, Tattersall, a lovely black, the first Barnstaple; and r, McHardy, grand black, the Dairy first, hard done by; vhc, May, a good-headed black, a pity to meet in such company; Tattersall; hc, Ward, Crawford; c, Stanford Bros. A. O. C.—Cock: 1, sp., 2, Bright, two grand-colored yellows, former perhaps better cut; 3, May, red, good color, fails front; vhc, Bright, Stanford Bros.; hc, Tattersall; c, McHardy; too late, Blyth. Bred '06, Black, Blue, Silver or Chequer—Cock: 1, sp., chal. cup, Dr. Davies, very rich colored black, nice cut, but wants top, and not best of carriage; 2, Tattersall, black, good color and eye; 3, Tunnell, rich blue, good head, unbroken in bars; r, May, neat chequer; vrc, McHardy, Bright; c, Tattersall, Bright. Hen—Any Age, Black, Blue, Silver or Chequer: 1, sp., McHardy, lovely-headed black, good eye, beak and carriage; 2, Dr. Davies, black, richest of color, not the top; 3, May, very good chequer of right type; vhc, Tattersall 2; hc, Bright; c, May and Bright. A. O. C.—Cock (4): 1, spoon, 2, 3, Bright, yellow, red and yellow respectively, winner lovely color, but ragged in cut; r, Tattersall. Hen: 1, sp., Bright, yellow, nice size, good color, eye and head; 2, McHardy, good type, fails color; 3, McHardy, rich-colored yellow, little downfaced; r, May. BEARD, Black, Blue, Silver or Chequer—Cock: 1, sp., McHardy, lustrous black, nice chuck and head; 2, Bright, sweet-headed blue, close up; 3, Page, neat blue, good color and chuck; r, Fowler; vhc, Bright, Hall and Hartley; too, late, Litster & Son. Bred '06—Cock: 1, sp., 2, Fowler, winner really good headed black, nice face, and rich color, second not the substance of skull; 3, Newman, blue, even color, and nice bars, little deep in chuck; vhc, Page; c, Hartley. Hen: 1, sp., Shaw, very good blue, nice chuck and head; 2, Bright, a really good colored and headed black, if anything our choice; 3, Bright, chequer, neat head, poor carriage; r, Hartley; vhc, M. Davis. A. O. C.: 1, sp., Bright, grand headed and colored yellow; 2, McHardy, red, excels in color, but not so stout; 3, Hartley, red, but long and stained in upper mandible; r, Thompson; vhc, Holmes; c, McHardy; too late, Blyth. A. O. C.—Cock: 1, sp., Hartley, grand red, very rich, and nice chuck; 2, Holmes, another red, better head, but not the color, the Barnstaple winner; 3, McHardy; vhc, Thompson. Hen: 1, sp., Bright, very rich yellow; 2, Fulton, red, sound color, and correct type; 3, McHardy, another cobby one, a yellow of good stamp. RED or YELLOW MOTTLE or ROSE—Cock: 1, sp., Mitchell, rich even-colored red, good shoulders, but short in back markings; 2, Clark, nice-headed yellow mottle, very cobby, poor color; 3, Duncan, just fair red, good color; r, Garratt, cobby yellow mottle, heavy one side we thought; c, May, a really grand yellow, wonderful head and neat markings, showing age, but a good one yet; vhc, Austin, May, Garland; hc, Skinner, Minnis; c, Mitchell, Dawes, May. Bred '06: 1, sp., Bond, yellow mottle, lovely shape and head, but patchy in markings and down-faced; 2, Dawes, very cobby yellow, neat head and eye markings, but heavy; 3, Boardman,

yellow, good markings, head and color, rather long; r, Viner Leeder; vhc, May, Tunnell; hc, Price; c, Wright. Hen: 1, sp., White, red mottle, very short, good color, and neat markings; 2, Austin, lovely-headed yellow, grandly marked one side; 3, Mitchell, neat yellow mottle, heavy one side; r, Skinner; vhc, Leetman, Roll; hc, Garratt; c, Goodchild, May. BLACK MOTTLE or ROSE: 1, sp., Clark, grand-bodied pigeon, neat markings, rather flat on top; 2, Crawford, a beauty, real good markings and head, pressing hard; 3, Smith, another good one, fine carriage; vhc, White, Leetham, Williment 2, Clark; c, Walaron. Bred '06: 1, sp., chal. cup, Clark, nice shape and carriage, not best of markings; 2, Austin, very short and cobby, pernaps a little heavy one side; 3, Price, we missed; r, White, Dairy second, lovely pigeon, not looking quite same; vhc, White, Austin; hc, Barnes; c, Turner and Beech. SELF, Black—Cock: 1, spoon, Williment, an old champion, still looking fit; 2, Brown, another grand pigeon, not so good profile; 3, Williment, a real round head, short in body, and little short in face; r, Williment, very cobby, wants top; vhc, Fulford, Paulin, Haylett; hc, Williment, Rogers. Hen: 1, sp., Williment, very cobby full-fronted and shapely hen; 2, Paulin, nice pigeon, good profile, lovely cere, liner in beak; 3, Rogers, correct shape, good color, fails top skull; r, vhc, Williment; vhc, Fulford, Philip; hc, Brown; c, Sawyer. Bred '06—Cock 1, Williment, wonderful-headed pigeon, lustrous, good size, little long and fine in beak; 2, Williment, not head of winner, good beak, smaller; 3, Rogers, Dairy second, really good type, on small side; r, Williment; vhc, Markham, Paulin, Turner, Williment, Brown; hc, Marr; c, Roll. Hen: 1, sp., 3, Williment, winner rare-headed bird, good color, looks like cock; 2, Haylett, very cobby, not so big in head; r, Paulin; vhc, Williment, Bromley, Brown, latter very decent Tumbler, with white nails; hc, Rogers. Red—Cock: 1, sp., Carwardine, grand head and color, slight bar in tail; 2, Philip, lovely head and shape, not so rich, little long; 3, Livingstone, richest and soundest red in class, poor head; r, Crawford; vhc, Brown, Carwardine 2; hc, Williment, McDougall. Hen: 1, sp., Carwardine, very rich color, good eye and head; 2, Ewen, grand head and shape, little stained in beak; 3, Austin, very cobby, fairly even in color; r, Holmes; vhc, Brown, Carwardine. Bred '06: 1, cup for best self, Carwardine, lovely headed and beaked red, of good even color, popular win; 2, Philip, very rich color, liner in head, good beak; 3, Even, short and cobby, nice bird, fails size to winners; r, Brown; vhc, Murdock, Williment; hc, Smith, Livingstone.

THE POUTER.

There are very few really good judges of pouters—few who know where to look for points which make the finish of a perfect bird. An experienced eye, on the other hand, can detect a good pouter in whatever position it may be, whether in the act of feeding, sitting in repose on its block, or in full show. When the girth of body is slender and the shoulders and limbs are perfectly placed, it cannot get into a bad position; whereas a faulty bird can sometimes show itself to advantage.

Position is everything in a pouter, to get this the legs must be placed far enough back in the body; however good a crop it may possess, if it does not stand at the right angle the whole beauty is lost. If the legs are too forward a pouter loses height, which is an important feature. When passing along a row of pouter pens, the bird that stands the highest is generally a good one, though possible it may not have the longest limbs.

In breeding it is always well to use birds with long limbs, but it does not follow that the result will be satisfactory; the advantage of long limbs is lost if the bird does not show them. Many pouters will show six and one-half inches better than others will seven or seven and one-fourth. This depends greatly upon the length from the ankle to the hock, commonly called the lower joint, which should be as long as possible; then if the high joints are close together and the legs straight, little more can be wanted, as far as limbs are concerned. It is not desirable, however, that the thigh joint should be too prominent, but seeing that many of the most slender-bodied and closest-limbed pouters are so formed, although it is a defect, it must not be too readily condemned.

A slender waist is an important feature in a pouter; when taken in an ordinary sized hand the body should be easily grasped. From both the front and hind view it should be narrow, the back being slightly concave rather than convex, round shoulders or hog back, which causes a bird to rump when playing, being great eyesores. The wings should be lightly drawn up to the sides of the body, the lower part resting just above the thigh joints; the tighter they are the better will the division between the crop and body be defined. The flights should be broad, but gracefully lapping over each side of the tail, without being crossed and reaching nearly to the end; drooping wings are a great defect. The breastbone should not be prominent, nor should there be any thickness above the vent. The tail rather full, perfectly straight, and carried off the ground. The formation, from set in of neck to end of tail should be spiral, except as regards the fullness of tail.

It is considered by some admirers of pouters that the crop is the most important feature in the bird. We would ask those who hold these views to place a pouter with hog back, wide limbs, and drooping wings, with the most perfect crop, by the side of one that is tall and spry, with gracefully placed wings, tail and limbs. It will then be seen that symmetrical formation of body and position of the legs must always come before crop, notwithstanding that the globe, when perfectly formed, adds greatly to the beauty of the bird. The first thing to look for in connection with the crop is the division that marks where it is connected with the body; it should appear, although under the complete control of the bird, to be attached to the body by such slight membranes that it should be removed with the greatest ease. When fully distended it should bulge out from the neck in the shape of a perfect globe, attached to the body in graceful lines, slightly arched over the top of the neck, and half hiding the head, which should be small with a bold eye. In the act of playing, the component parts of the pouter should all work together in unison.

With the distention of the crop the shoulders and wings become lightened, the limbs elongated, the neck arched, and the eye full of fire. It will thus be seen that the narrower the waist the more defined is the crop, and that on the correct position of the legs depends the style and carriage of the pouter.

No pigeon takes so much preparation for show as the pouter, for upon its tameness and desire to exhibit its good properties depends its chances of success. The fancier who intends to show should have a room fitted up with a number of small pens, which should be at least two feet square and three feet high; each pen should be divided by a sliding partition, so that the latter can be drawn out, and the birds occasionally allowed to see each other, its place supplied by a lattice partition, to prevent them getting near each other to fight. If possible, the pens should all be on one side of the room, so that the inmates cannot see each other, solitude being very desirable when training is going on.

The chief object is to make the birds hail your appearance with delight, and this can more easily be done when you are the only object that they see; then the fact of associating the slides, and a peep at their neighbors, gives to them a favorable impression of a visit from their trainer. The advantage in keeping the birds in private during the time they are being trained, is that when put into the show pen they are so pleased to get into company again that they will probably remain in good show form until long after they have been judged. It is not advisable to keep the pupils more than a fortnight in the pens, but during that time, by talking to them in the language that pouters love, they can be got into show; the more time the trainer can spend with them the sooner his work will be done.

The best food for pouters are well seasoned tares, small tick beans, and maples peas, the first named to be given in larger quantities than the others. A little food should always be left with the birds, and they should have free access to water, for a pouter if allowed to get hungry or very thirsty is liable to gorge, and this is generally done by the largest cropped birds. When a pouter was gorged, the old fashioned plan was to hang it up on a wall in a stocking; but a better way to relieve it is to put it in a box with its coop resting on hay. The food will generally digest in this way, if taken in time; but there is danger under any circumstances. Sometimes it is necessary to cut the crop open and take the food out, but this must be done very skilfully to be successful.

One more hint to breeders of pouters: Cut the tails of the male birds during the breeding season, leaving about one-third. You will spoil the appearance of the birds until they molt, but you will get double the number of fertile eggs.

PLYMOUTH ROCKS.

HILL CREST FARM'S Silver Penciled and Partridge Rock winners at World's Fair, Madison Square Garden, Herald Square, Trenton, Wilkes-Barre. Stock for sale. Every pen is headed by a prize winner cock or cockerel. Eggs, $2.00 per setting. Wm. F. Fotterall, Oakford, Pa. 681-707

WHITE PLYMOUTH ROCKS, Grave's Strain. 1 cock, 3 cockerels for sale. I am a fancier, not a dealer. Return stock at my expense if not satisfied. Sunny Crest Lofts, Nutley, N. J. 682-685

WHITE PLYMOUTH ROCKS at Owen Farms include the entire flock of the late H. W. Graves. This strain has produced more winners for the leading shows than all other strains combined. The finest flock of this strain ever raised is now on our farms. Our Buff and Barred Rocks are equally good, and we offer you sure winners, and good breeding birds of all three varieties that will please you. Our illustrated catalogue is yours for the asking, and will tell you about our farms and our birds. Owen Farms, Box J, Vineyard Haven, Mass. 677-728

WHITE PLYMOUTH ROCKS. FISHEL'S are the best in the world, winning more prizes at World's Fair than any other two White Rock exhibitors. My new 48-page catalogue is the finest poultry catalogue ever issued. Send three 2-cent stamps for a copy. 5,000 birds to sell. Address U. R. Fishel, Box D, Hope, Ind. 643-694

EDDY'S BUFF ROCKS EXCLUSIVEly.—I have three hundred breeders mated for best results. Extra good layers. Eggs, special mating, three dollars per thirteen; regular $2 layers, $1. Discount on large orders. The Poplars, D. B. Eddy, Prop., Somerset, Mass. 643-694

CANADA'S BEST BARRED and BUFF Rocks.—I have mated some of the grandest specimens of these two varieties that can be found. Will give excellent value in eggs and stock. Fine illustrated catalogue on application. Eggs, $3.00 and $5.00 per setting. Stock for sale. J. R. Boyce, Box 412, London, Canada. 647-698

BARRED PLYMOUTH ROCKS. BRADley Bros. Strain pure. Over 500 birds for sale, old and young, with quality to win in any company. Catalogue with photographs of my winners and list of winnings free. Blue Barred Farm, F. H. Castner, Propr., Glen Gardner, N. J. R. F. D. 1.

BARRED ROCKS OF QUALITY—MY winnings at the leading shows a proof. A positive guarantee with every bird I sell. Your money back if not as represented. Mating Barred Rocks for results a specialty. W. A. Mason, Ashland, Ohio. 671-722

POULTRY RAISING.

By James G. Halpin.
Agricultural College, Michigan.

IN order to obtain fall and winter eggs we must have stock produced from the eggs of healthy, vigorous fowls. A fowl which has suffered, or is suffering from disease, should not be allowed to produce offspring. Although, in some cases, chicks from the eggs of unhealthy fowls succeed in getting out of the shell in fairly good form, in the end they almost invariably prove unsatisfactory. It is fortunate that the eggs from diseased fowls are seldom fertile, otherwise there would be more unthrifty birds in existence. The offspring from a "roupy" hen is not likely to inherit this disease, but is liable to have a weak constitution and thus fall an easy prey to roup or some other malady. Small, lazy, worthless individuals in the flock are usually from parent stocks which have been affected by disease. One of the first things to do then is to discard all fowls that are not strong and healthy.

Proper Food, Exercise, Etc.

In order to have a healthy, vigorous flock they must be provided with the proper amount and variety of food, plenty of fresh, clean water, good pure air, and exercise when under confinement. It is not our purpose to enter into a discussion of feeding here, but merely to say that fowls should have a variety of grains, fed regularly, with proper care as to quantity. Exclusive rations of corn should not be expected to produce eggs that will hatch vigorous, thrifty chicks. But good results should be secured from a mixture of grains, such as corn, wheat and oats, fed in connection with a mash feed composed of such materials as bran, middlings, corn meal and beef scrap, to which green food is added unless the fowls have access to a grass range. If the range supplies a good many insects the beef scrap need not be fed. Judgment must be used, as no absolute rule for feeding can be given. Owing to the freedom fowls enjoy in and about the farm yard and the great variety of suitable food secured, there is less necessity for the purchase of commercial foods on the farm and the formation of highly artificial ration, than in the case of the village or town producer.

Select Natural and Well Developed Producers.

A hen suitable to become the mother of the future laying stock should be a good producer herself, and one fed to stimulate production. Among all classes of domestic animals we find some that are naturally prolific, while others in the same flock or herd possess this quality in greatly varying degrees, a few being absolutely sterile; the same is true of poultry, some hens are abundant layers, while others equally well fed and cared for are almost worthless. The prolific layer is the one that should be saved for the parent and fed to lay, as we believe that a hen which has been fed and stimulated to lay a large number of eggs is more likely to produce offspring possessed of the same quality than one equally well fitted by nature to produce, but which, owing to poor care or neglect, has not laid many eggs.

Early Layers.

Frequently a pullet starts laying before the others and continues to lay well all the year; such a one should be carefully watched and her eggs saved, providing sufficient size was attained before she began laying.

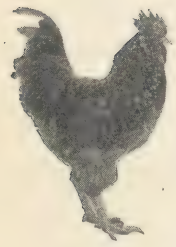
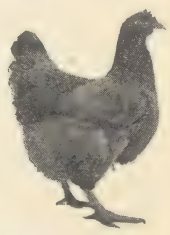
Poultry Books

Poultry Remedies: Points out the causes describes symptoms and gives simple remedies for all diseases; 84 pages; price, 25 cents.



The Chick Book: Tells how to obtain good hatches with hens and with incubators; how to feed and care for chicks with hens and in brooders; how to build coops; gives complete instruction in all work connected with successful chicken growing; 80 pages; illustrated; price, 50 cents.

Artificial Incubating and Brooding: Solves all problems of artificial incubating and brooding. Tells how to obtain strong-germed, fertile eggs, how to oporate incubators and brooders; 96 pages; illustrated. Price, 50 cents.



The Leghorns: The best illustrated standard of all varieties of the popular leghorns. Mating schemes clearly described; you cannot afford to be without this valuable information. Color plate of S. C. White Leghorns; 178 pages; illustrated. Price, 50 cents.

Anyone of the above books sent postpaid upon receipt of price, which includes a year's subscription to our popular Family Journal.

The American Fancier

VOL. XXVI NEW YORK CITY, AUGUST 1, 1907 No. 684

THE CURE OF ROUP.

In Poultry or Pigeons by the Diphtheritic Antitoxin.

Dr. Wm. L. Pyle, Jersey City.

MANY years ago I wrote an article for The American Fancier on Roup or Fowl Diphtheria, giving particular attention to its treatment by the then new treatment of Diphtheritic Antitoxin. The interest in this form of treatment was so widespread among poultrymen at that time, having received replies from Canada to Texas for further details, that I don't wonder, Mr. Editor, that you ask me for a further contribution on the same subject, for since that time the treatment has passed the experimental stage and is as secure and positive as the treatment of human diphtheria by the same method.

We may define Roup or Fowl Diphtheria as an acute specific contagious disease occuring in fowls, due to a known germ poison, and characterized by a membraneous deposit in the mucus membrane of the throat, base of tongue, nostrils or eyes. It is nearly always accompanied by a peculiar stinking discharge.

I found that poultrymen were apt to confound this disease with the ordinary catarrhal colds in fowls, also with tongue canker and with chicken-pox, but with a little study this can be avoided. The ordinary catarrhal colds do not "run into Roup," but they do predispose to it, and if a fowl in such a condition contracts the diphtheria germ then the disease becomes all the harder.

Neither does chicken-pox run into Roup, but it does lower the bird's vitality and leaves him predisposed, and if infected may have both diseases at the same time.

The fowl suffering from Roup in its acute form looks sick, stands around dejected with ruffled feathers, drinks water constantly, almost refuses to eat, and, remember always, has that membraneous deposit somewhere in the mouth ,throat or nose. In quite a number of cases where the membrane is in the windpipe, the fowl will make, at frequent intervals, a peculiar inspiratory croupy noise, which is quite diagnostic when present. If in this stage, a culture from the throat be sent to a pathologist, he will report that he finds the diphtheria bacilli present, and that it is a case of diphtheria. So much does this bacillus resemble the Klebs-Loeffler bacillus of human diphtheria that even the microscope cannot well tell the difference.

But clinically there is a difference, for this disease in fowls is not, under ordinary circumstances, contagious to the human race. Twice I have seen an infected sore on the hand from it, but after festering a day or two would soon heal without further trouble.

It was this similarity of fowl diphtheria to human diphtheria that made me, many years ago, try the use of diphtheritic antitoxin of commerce for the cure and prevention of Roup in fowls or pigeons. The result of its curative action was so positive and prompt that I was surprised more than I can tell you. The most of my cases were in game bantams that were very susceptible to the disease when infected. Roup in this breed of fowls runs an awful course, from three to six weeks, 50 per cent. of them dying, and the other 50 per cent. were seldom of any value afterwards as a breeding bird, but when injected in the breast muscles with the antitoxin, especially in the early stage of the disease, they invariable got well, and in three or four days.

Antitoxin can be obtained at any up-to-date drug store, and in country districts from every physician. It is sold in sealed glass tubes, with hypodermic needle and piston attached. Five hundred units of it cost about one dollar, and is sufficient to cure two or three fowls of 5 pounds each, or this amount will be sufficient as a protection dose for about six fowls of the same weight.

If a fancier has valuable birds, which he cannot afford to lose, this is an ideal remedy for him, with quick and positive results, both as a protection and as a cure.

I think anyone with a little tact could give a hypodermic, as this remedy must be so given. But if you cannot, then do not write to me or even The American Fancier for further details, but take your sick fowl, with the antitoxin, to your family physician, show him this article, and I think he will be interested enough for you to show you how it is done and not be mercenary at the same time.

But let me say to you, that if you contemplate using antitoxin, use it in the first or second stage of the disease, and not when the fowl is practically moribund, for at this time the streptococci, or blood poison microbe is getting in its deadly work and antitoxin is then of no value.

In articles that I have seen, much has been said for the local treatment of Roup, and in the chronic form of the disease, where the bird is slowly recovering of himself, some benefit can be derived from the local use of mild caustics, at least to make the membrane disappear; but in the acute stages they are useless and generally very harmful. The use of turpentine injected into the fowl's nostrils has been much spoken of, and in the acute stages I can only say for it that it is both vicious and brutal, and I believe useless as a real cure.

FOUR AYLESBURY DUCKS
Imported
3 Firsts, 1 Second, Boston, 1907, owned by E. H. Morris, Sparkill, N. Y.

THE AYLESBURY DUCK.

By Edwin H. Morris.

Edward Brown, F. L. S.—the English expert—during his visit to this country, confirmed the oft-repeated opinion of the writer, that what in America is called a Pekin duck is actually a Pekin-Aylesbury cross. This is evident in color, shape, poise and size.

Some are disposed to contest this assertion, on the ground that very soon after the early Pekin importations, ducks were produced with keel and other Aylesbury characteristics. It is not known to them that the Pekin duck was crossed with the Aylesbury at that period in England, and that though Pekins were ordered, it is likely that they carried Aylesbury blood.

Breeders of utility ducks have been represented as seeking fresh blood for prepotency and vigor, and recent importations have been made direct from China and even Japan, with this avowed purpose.

The more recent Japanese importations—on exhibition at the last New York show—did not find favor with some utility breeders, because of their lack of size, and the Japanese commissioners who visited the show did not consider them a good selection.

Since his return, Mr. Brown has written that after having tried the Pekin in England, breeders decided in favor of the Aylesbury because of their more rapid growth and better quality of flesh. He, after visiting the English and American utility farms, indorsed the English view, and he is a man without prejudice, of extensive experience and considerable caution.

Therefore it would seem to be worth while for American breeders of Pekins to consider the advisability of an Aylesbury cross, in attaining greater prepotency and vigor.

This would really mean a return to the stock which first found favor in this country, instead of going back to the primitive Asiatic blood.

This combination with considerably more Aylesbury blood is the commercial article of England, giving size and flavor with instinct for foraging.

The disposition to forage is valuable in the breeding stock, as it maintains vigor, keeps up a touch with nature, as against artificial enervating conditions, and makes a saving in the feed bill.

In judging Pekin ducks, even at the leading shows, the elevated front, as called for in the "Standard of Perfection," is invariably disregarded and size—usually accompanied with keel, an Aylesbury characteristic—seems to have most weight in show awards.

Therefore an Aylesbury infusion of blood will also be found to be really advisable from the exhibition viewpoint.

The most noteworthy recent effort to present the Aylesbury favorably in America was in the pair exhibited by the writer at the New York and Boston shows of 1906, which were sold to Mr. Geo. .B Inches of Mass. This was followed by an importation on a much larger scale, consisting of some of the best show specimens in England. These won at the New York and Boston shows of 1907 and are shown in the picture above. Though they won 3 firsts and 1 second at Boston, under a judge of ability and competency the one that had to be content with a second place was fairly beaten by one produced by Mr. Inches from the winners at the previous show. As the defeated young drake had been placed at the Crystal Palace show in England, Mr. Inches had with a pair bred something as meritorious as the most skilful breeders of their native country could produce from their thousands.

It also demonstrated that even in the New England climate the Aylesbury can be brought to perfection, and will produce their equal, instead of showing a deterioration.

In thus presenting the issue in a common-sense, practical manner, in a paper that has to be useful in order to become great, the writer has only in view the placing of water fowl in America on a par with the European productions and the ethical significance of it should appeal to not only market duck raisers, but to those who exhibit and look to the "Water Fowl Club of America" to accomplish this aim.

THE AMERICAN HEN.

Poets may sing of the glory of the eagle and artists may paint the beauties of birds of plumage, but the modest American Hen is entitled to a tribute for her industry, her usefulness and her productivity. The American hen can produce wealth equal to the capital stock of all the banks of the New York Clearing House in three months and have a week to spare. In less than sixty days she can equal the total production of all the gold mines of the United States. The United States proudly boasts of its enormous production of pig iron, by far the greatest of any country in the world, and yet the American hen produces as much in six months as all the iron mines of the country produce in a year. In one year and ten months she could pay off the interest bearing debt of the United States.—Congressman Dawson, of Iowa, in the House.

LIVER DISEASE.

By C. B. Taylor.

There is no doubt that liver complaint is the most prominent and mischievous disease of poultry. There are two principal forms of liver disease—congestion of the liver and enlargement of same. Both of these forms arise in the same way, and are to a large extent from the same cause, which render it impossible for the amateur to tell which of the two complaints the bird is suffering from, and he has to rely on guessing. The symptoms are the same, differing only that where the liver is inflamed the trouble comes on faster than when the bird is suffering from an enlarged liver.

It is during the summer months that liver complaints are plentiful, for it generally begins to show itself just when the hens are giving up laying, and often when they are starting to moult, at which time there is more or less derangement of the whole system, especially in birds that have passed their second laying season, which have more difficulty in moulting than young birds. Doubtless the intense heat of summer induces a sluggish condition of the system, and a liklihood of disorganization of the liver when the system is run down by long-continued laying.

No doubt many will wonder what are the causes of an inflamed and enlarged liver. The birds are suffering by reason of having been fed on unsuitable food, and in very many cases are simply overfed. Overfeeding is dangerous, and birds which are kept in confined runs must not be overfed. I know of poultry rearers now who have fifty birds in a small run, and feed three times a day as much as they can eat, and then find there are none laying; and they grumble and say, "Hens don't pay," or their birds are not layers. And when I have had permission to handle a few—talk of condition! why, they were rolling with fat. No wonder they do not lay, but mope about all day.

Fowls need two sorts of food—nitrogenous (frame-forming) and carbonaceous (heat-giving). The former is required to build up the tissues of the body, and supplies materials for the development of eggs and feather substance, while the latter kind gives tone and heat to the body, good circulation of the blood, and enters into composition of the tissues with the other. Nitrogenous constituents abound in animal food and insect life, and are found in cereals such as peas, oats, tares, beans; while carbon is found in the form of starch and sugar. Fowls require far more nitrogenous food than carbonaceous food, so it is advisable that the diet should be regulated accordingly.

What a number of poultry keepers feed mainly on Indian corn—a food which contains a great amount of starch and less nitrogen than any other cereal—the reason being that it is the cheapest food in use and a grain with little waste in it! But birds fed liberally on this grain will by slow degrees gradually acquire a starchy liver, and are liable to have an enlarged liver and a discolored one. Do not feed poultry heavily on starchy foods, for the majority of deaths in fowls are due mainly to liver complaints. There are other causes of liver complaints, such as tuberculosis, which is more or less hereditary, is often contagious, and means the loss of whole flocks of birds. This is only exceptional, but food and feeding have something to do with the trouble.

What are the symptoms which point to liver disease? The comb is shriveled and dark, and the bird has a dejected, lazy appearance. There is an apparently abnormal hunger, with a rush for the food, and then a kind of sickening at the sight of it, particularly in late stages, which point to inflammation coming on and fever, and then diarrhoea, emaciation gradually, food remaining in the crop and not digesting, and often watery fluid in the crop. All these are common symptoms of liver complaints.

All birds showing signs of this complaint should be moved to fresh ground and fed only as much as is necessary to keep them going; also let them have fresh drinking water often, to which add iron or Parrish's chemical food, and make it alkaline with Epsom salts.

In bad cases I advise giving the birds a dose of calomel, a quarter of a grain, with a little magnesia, given night and morning. The only practical way to clear the liver and tissues of the starchy condition into which they have degenerated is to force the system to feed on itself, as it were, for a time, by which means the birds, if not in a very bad way, may be speedily cured. In conclusion, keep them busy exercising, and, above all, do not overfeed, and with proper attention and judgment liver complaints will be seldom found among your poultry.

FEATHERED WORLD.

Hens will never begin to lay unless they have plenty of exercise.

Overcrowding is another evil which greatly handicaps the fancier and causes no end of disease.

Fifty well-cared-for hens, with proper house and range, will give better results and greater satisfaction than one hundred half kept.

* * * *

Cleanliness is also a great factor in successful working of the poultry plant, whether on a large or small scale.

Too much cannot be said in favor of having everything scrupulously clean, especially the vessels in which birds are fed and watered, also the houses in which they roost.

* * * *

Poultry, to be healthful, weigh a certain amount or lay regularly, must of necessity be well cared for.

The feed and grit must be of the best, and don't make the mistake so many fanciers do of giving your stock too much at a time or too little, thereby starving them.

Just enough to eat up, and let them have it fresh every time you feed. Exercise is another essential. The flock should be given as free a range as possible.

* * * *

SIZE AND WEIGHT OF BLACK MINORCAS.

Editor American Fancier:

The last annual meeting of the American Black Minorca Club instructed me, as secretary of the club, to take a vote of the membership to ascertain their preference in regard to the present weights of Single Comb Black Minorcas, whether it would be desirable to have them remain as they are now—9 pounds for cock, 7½ for hen, 7½ for cockerel, and 6½ for pullet—or if members would prefer to return to the old standard weights. The result of the vote is, that 90 per cent. of those who voted, favor the present standard, and what they have written is emphatically opposed to lowering the weights at all.

When the standard weights were first raised, some objected to them because they did not fully understand the import of the higher weights as modified by other parts of the new Standard. The new Standard does not encourage breeding larger Minorcas than we have been accustomed to do. The old Standard, by which a lower schedule of weights was in force, said: "All other requirements being equal, the largest bird must be given the preference," thus advocating unlimited size. The best Black Minorcas, as we have found them in the show room since before they were admitted to the American Standard in 1888, have averaged from one to two pounds each heavier than the old Standard requirements. The object in raising the standard weights was to make them nearer the actual weights of the birds as seen on exhibition. This was the more necessary because the policy of the general instructions in the new Standard was to confine breeders nearer to fixed weights, to the end that nearer uniform size might prevail in birds of the same variety. The new Standard says: "All other points being equal, the bird nearest standard weight shall be awarded the prize." And makes it more emphatic for large birds in another place, as follows: "If both specimens are over weight, yet have an equal score, the one nearest standard weight shall be awarded the prize." Hence the new Standard weight for cock being 9 pounds, a cock weighing 8¼ pounds wins over a 10-pound cock, all other points being equal, while, according to the old Standard, a 10-pound cock could win over all cocks of equal scores weighing less, down to 8 pounds. Nearly all the best Black Minorcas which we see on exhibition would lose for overweight according to this, if the Standard weights were changed back to the old weights. Besides, we would be going farther away from the size of the first Minorcas which were imported to America.

All that can be said in favor of lowering the Standard weights of Minorcas is that it will permit smaller birds to win the prizes and cause the Minorca classes in our shows to diminish in number of birds by shutting out many of the fine large birds which it is the delight of the true Minorca fancier to breed.

Yours fraternally,
GEORGE H. NORTHRUP, Secy.
Raceville, Washington Co., N. Y.

George Ford Morris, the Chicago animal painter, who is now here to make sketches of famous Kentucky saddle horses, is engaged in the breeding of game chickens so reduced in size as to be no larger than pigeons.

This breed of chickens will be used by Morris in "after-dinner bantam fighting," which he expects to introduce for the first time in New York in December. His idea is to erect the pit in the center of the table at the end of the feast. He says his innovation is bound to be a popular one.

SHOW ROOM PREPARATION.

By F. J. Perrin, De Soto, Wis.

To the uninitiated it may seem unseasonable to choose the above subject for publication in midsummer, but the veterans will agree with me that the time to commence to prepare for the next winter's shows is the winter preceding them. By this I mean that in order to produce good show birds we must commence in the winter and get our matings in a condition that will produce strong, healthy chicks, giving them as good a start as possible before they are hatched.

I leave my chicks in the nest for thirty-six hours and then remove them to a good, dry coop and give them lukewarm water and oat meal (dry). This is their only diet until they are old enough to eat wheat. Then I give wheat and let them run at large, depending on the chicks to find a large part of their feed themselves. Since discarding "Johnnie Cakes," patent dopes, etc., for the above, I have never had a case of bowel trouble and my chicks have grown bone and developed faster than ever before. Always keep them hungry and they will not take on too much fat, thereby maturing too young. This I believe causes as many short-weight fowls as lack of care, lice, etc. A chick which is fed too much will take on the appearance of a mature fowl when two or three months old and instead of continuing its growth until a year old or more, will reach its full weight, which is from a half to two pounds under Standard, by the time it is eight months old.

As soon as the cockerels show any male propensities they should be separated from the pullets, as only in this way can they be forced to give their whole attention to the business of growing, and allow the pullets to do the same. The successful show bird is the one which has grown to standard weight, instead of being fattened to it. The former will stand the confinement of the show room for weeks, while the latter will have fallen off both in weight and condition by the time the second show is reached.

In preparing the old fowls care should be taken to break up the matings as early as possible and to get the good colored plumage, care must be exercised during the moult. I wait until the moult starts and then shut down on the feed for about ten days, feeding as sparingly as possible. Then gradually increase until I give all they will eat, together with as much green stuff as they will take. This will bring out the new feathers and shorten the moulting period. The best results I have ever secured with moulting my show hens has been by letting them hatch a late setting of eggs and then forcing them to rough it and take care of the chicks until they are weaned. I have had hens raise chicks in September and October in this way and when the shows opened I have had three-year-old hens with pullet plumage.

KEEP THE HOUSES CLEAN.

Did you ever watch a hen just after you had put in some nice clean straw in the next boxes? Hear her talk about it when she climbs in to lay her egg! She knows the difference. She is a happier hen than she was when the straw was all mussed up, and it is the happy hen that makes the money.

Some men say that it does not pay to clean the hen house oftener than once a year. They are the ones who want "every hen on the farm killed." They know hens do not pay, and they do not and cannot where they are treated that way.

MINORCAS.

Poultry On The Farm,

By

"RUSTIC."

WEIGHT OF MINORCAS.

By Rowland Story.

THE publisher and editor of American Fancier has commissioned me to write something on the weight of Minorcas—something "brand-new." Well, there is not much that I can say that is new, as my views have been circulated on most all points concerning Black Minorcas. In reviewing some of my former articles on the subject of "Size and Weight" of Minorcas when the Standard of Perfection called for an 8-lb. cock, a 6½-lb. hen, a 6½-lb. cockerel and a 5½-lb. pullet, I said I was satisfied to continue at these weights. The old standard also contained a clause under instructions to judges—"other things being equal, the largest bird wins." We continued to show under these laws and the heavy-weight birds got all the prizes they were entitled to, many judges forgetting other things being equal. I am frank to say here and now if the American Poultry Association prescribes a standard weight for Minorcas of 15, 13 and 11 lbs. respectively for cock, hen, cockerel and pullet, I will try and produce them.

My point is and ever has been that when the A. P. A. says the standard for Minorcas shall be 9, 7½ and 6½ pounds, which is the law now and should be observed, the bird nearest the standard weight wins, other things being equal, I claim to have originated this clause as adopted by the American Poultry Association in the 1905 issue of the standard under instructions to judges. I will say just here that Minorcas have grown in size and weight faster than the A. P. A. prescribes. It is the exception that an under-weight bird is shown at our leading shows. I do not want to be misunderstood regarding weight—a small-size fat bird or a large-size bony one. A Minorcas should be symmetrical in shape, color, weight, condition, and so on, down through the list to make a perfect bird. Shape makes the breed and color the variety.

Experience teaches that the size is more generally obtained from the dam than from the sire and that the use of big sires is a waste of time. Breeders should also remember that over-size in either sire or dam is a serious mistake and that the results therefrom cannot be estimated, though they are more than likely to be disastrous.

Preserve the utility-egg-type-money-makers-get-there style and practical purposes will have been accomplished. The demand for extra size and weight is not a healthy demand and will blow over, but in the meantime it unhappily encourages the judge to give the preference to the large bird, sacrificing Standard weight to heavy weight and large frames.

If I am to be dictated to as to the size of Minorcas, and the law set down is as called for by the Standard at present, pound for pound, I claim that when I show a bird of perfect Standard weight, he should have the preference over larger and heavier birds, just as well as over smaller and lighter birds. My position is that a bird should be cut just as heavily for overweight as for under-weight, and, other things being equal, the bird nearest the Standard weight should be given the preference.

In other words, what is wanted and what the Standard calls for, is large, long, deep, angular-bodied, muscular, active birds, that are capable of and do carry Standard weight the year round.

By permission of the Rev. Geo. W. Ferris, we quote from an article written by him for The American Black Minorca Club Catalogue.

What I Know About Black Minorcas.

Of course I mean the Single Comb variety. I have bred and owned Single Comb Black Minorcas for the last six years, and if I had not found them to be a very excellent breed of fowls, you may be sure I would have discarded them long before this time. I have owned and bred not less than fifteen or sixteen different breeds of fowls and I always tried to get the best, believing the best to be the most economical. Yet I have discarded them all for the beautiful Single Comb Black Minorca.

Ideal Head of a

Minorca Pullet.

It has been said of them, and I think very properly, that they are the largest of all the non-sitting breeds of fowls. I think I am safe in thinking that they are the equal in weight of the famous Plymouth Rock. I have bred and owned both Partridge and Buff Cochins, from the very best of stock, and yet I do not remember that I ever had a cock bird that weighed over 9 pounds nor a hen that weighed over 8 pounds. Since I have owned and bred Black Minorcas I have no trouble in getting them to the weight that the New Standard of Perfection requires, 9 pounds for a cock and 7½ pounds for a hen. I quite frequently have cockerels that weigh more than 8 pounds and several that weighed 9 pounds each when about seven months old. I have had hens weighing over 8 pounds 6 ounces and one 9 pounds." * * * "I also have had two cock birds, one weighing 10 pounds 2 ounces and the other one 10 pounds 9 ounces." * * * "I do not think it advisable to memorialize the American Poultry Association to change the present standard of weight back to the original one. I find as a rule my largest birds to be my best and most beautiful ones.

As to the laying quality of the breed, I find them second to none as to number of eggs layed, and their eggs the largest of any breeds of fowls I have ever had. I have one hen that 12 of her eggs weighed 2 pounds 4 ounces."

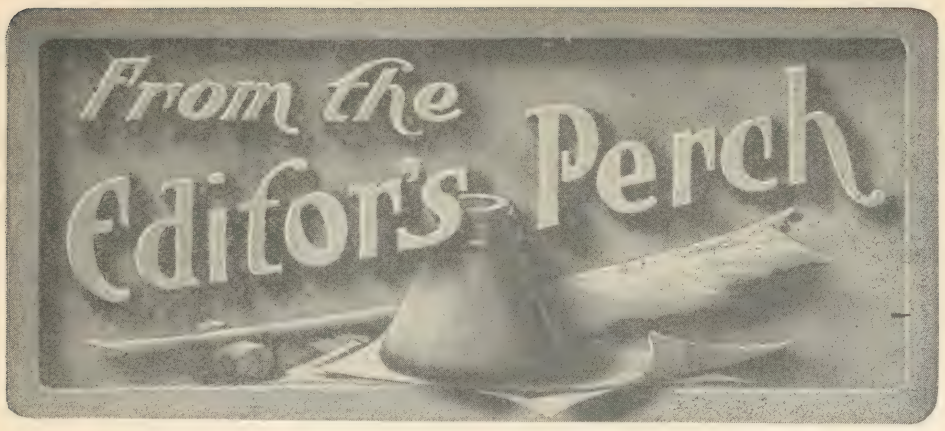
* * *

BUT on the farm, when I was a kid, the birds were my special charge, and how I stood with mouth wide open, when the chicken cranks came and gave eleventeen times as much as the butcher for the pick of the flock. They paid their money and they took their choice, fair and square, but what I couldn't understand was why these men and others, too, with judges and critic fellows came next year, though they had bought every bird "of the right type" and only left those fit for the butcher. From these we got our breeding stock.

I've grown some since those days, read some also, seen some shows, watched some of those judges and writers, and now, with your permission, I am "going some," for my head is so full of ideas it is like the buds in spring.

When I was a kid I said they were looking for lice, and when they all missed my pet cock because it had a shade of green on his legs, I decided they were away off. This is the bird that got "the right type," "the best they ever" and "real beauties."

He would trim the upstart cockerels and do his duties before breakfast, taking the flock to likely places, making things fly if delicacies were not plentiful. A dominant bird! His son and successor had something the matter with the spike of the comb, but couldn't he scrap! Licked his dad finally, a lusty, vigorous bird; and he carried on the good work after disposing of two show birds, bought because new blood was the talk. Fresh blood is all right, but I found a better way of getting blood with much else combined.



When those cranks came for winners for Boston and New York, it was nickles buys utility, but it takes dollars to buy winners. That much was plain. I was after the dollars, and when I began to wear pants I wanted to see the shows and where my pets were located. The locations were all right, but some hadn't room to stretch their legs or wings, and as for scrapping some to keep in form, why, they were too valuable. The poor hens had everything they wanted but worms, insects and grass. Nice shiney pans, with grit, shells, charcoal and feed enough, surely, for they were so fat it must have been exertion to lay. It was eat and lay, and were it not for the constitutions they got on the farm they'd never stand the strain, poor things. The men who owned them were judges and critics, so I could not talk to them. They seemed to be "up in the air," that is why I am "going some" without giving my name. If I did—sure—they would never read it. Did anything good ever come from a farm? Of course not; good things are kept in yards—confined—like the poor white-faced city kids.

Those judges were like they were when they called at the farm. Gosh! wasn't it warm at New York. How the critics did lash them. Uncle Pete was with me and when there was a lull I asked him what the first prize cock was. "Just a slob," says he. "Fat, feathers and fudge," says I. How is that? "Why," says I, "if we keep ours just as the butcher wants them, feed them sunflower seeds, when moulting, they will grow feathers, and if kept in a dark place at that time, they will be white enough, the dollars are coming our way." "But," says Uncle Pete, "sell 'em, my lad; for, remember cattle and horses only keep their vigor, constitution and ability to produce their equal, if exercised and kept near to nature." Then I could see why there was no style, poise nor curves, and as for vigor, a puff of March wind would blow it over. "It was a slob," sure. Someone gave $250 for it, though, when $5 was the limit out on the farm. One of the critic fellows put in his paper that "it was the best we have seen in many a day." "Might produce average stock from two hens," said I to Uncle Pete when I read it to him, but, says he, "that chap's business is gush, and advertising, my boy. He did in 10 minutes what the judge took nearly a day for. It's just bosh, "taint wholesome." This is the "fudge" part of the business.

FAT, FEATHERS AND FUDGE.

I'd just like, some day, when I am old enough, to go over, without humbug, a class for your paper. Why the best bird is the one that fills the eye, provided there are no serious defects, and these should be weighed against the good points. Type is'nt fat and feathers, and if the paper man adds the other "f" in fudge, it might reach the dollars. But what of improving stock, and isn't the show given for this purpose? A thing of beauty isn't a dumpy, squatty, shapeless lump with feathers. Why one judge gave $100 for a pullet from the White Wyandotte pen, because it had cushion, and the crowd of easily-led flock-of-sheep type of breeders present echoed that it was hard to get and therefore high priced. Uncle Pete smoled a smile and then whispered in my ear: "Top-nots are harder than cushions to get." Out on the farm we would go this way to work to get cushions: Finding a White Cochin without feathers on its legs, we would take a pullet with plenty of saddle, breed her early, select from them the most pronounced in this respect, breeding brother and sister together, also early, and you can graft that or any other similar peculiarity on a variety in quick order. Hard to get! Nonsense! It may help to deceive a superficial judge, and a critic hard pressed for time, as it makes the back apear short, but soon we may find them so short they will topple over when the male pays them attention.

The happy medium in the hand is worth a flock of absurdities and monstrosities in the imagination.

The half-tone on the title page of this issue was taken at the home of Mr. Rowland Story and represents his Black Minorca fifth New York Cockerel.

This photo was taken the latter part of June, and shows this bird in its summer plumage.

The half-tone has in no way been retouched, but shows the bird just as he was when the camera snapped.

This photo was taken expressly for the title page of this issue.

* * * *

Independence Day, 1893, was the birthday of The American Fancier, and you who have been its readers through these fourteen years have seen it grow, improve and then, by mismanagement, get in trouble, but the storm is past. It is in the race again; it is no quitter.

* * * *

The policy to be pursued by The American Fancier is that which has characterized it from the day of the first publication, September, 1893.

While striving to maintain a disinterested position, we shall not hesitate to expose fraud.

Our aim will be to make this publication a most impartial, up-to-date, reliable and popular magazine devoting its pages to thoroughbred poultry and pigeons.

The columns of this paper are open to all to impart information, news, etc., of the poultry world, but not to give undue praise.

The novice will make a large proportion of our subscription list, therefore they must be protected.

We know of no way whereby this class of readers are more misled than by the write-ups in the reading pages of a journal.

We have known of instances where certain owners of poultry plants have been heralded as owning the best of a certain variety, when in reality they were third-raters, and the impression formed by the novice must certainly be flattering.

Due praise of stock is valuable news and information to those not in the select circle also a great help to that vast army who intend entering the poultry fancy.

* * * *

The article by "Rustic" in this issue is from the pen of a well-known breeder.

The story is rather a short sketch of his life in the poultry world.

If other old-time poultry fanciers should relate their experiences, what interesting reading it would make.

* * * *

Dr. Wm. L. Pyle's article, "Cure for Roup in Poultry or Pigeons by Diphtheritic Antitoxin," appearing on another page of this issue, will explain a positive cure for this dreaded disease.

After many costly experiments and microscopic examinations, he has found that antitoxin, which is widely known to the medical profession, will cure Roup.

This discovery will save thousands of dollars worth of poultry and pigeons.

The first subscriber to The American Fancier was Mr. Charles Jehl—fourteen years ago—and he has always been known as Subscriber No. 1. On July 12th we received fifty cents from him to have the subscription renewed. The following is his letter:

June 14, 1907.

Leonard W. Lott & Co.,
108 Fulton St., New York City.

Gentlemen:

"Yours of the 13th to hand, and in reply would say that in August, 1893, when it became known that The American Fancier would be launched September 1st, 1893, at $1.00 per year, I immediately subscribed in August and became Subscriber No. 1." * * *

"I wish you lots of luck with the new Fancier, for I think there is lots of room with view of success for such a paper in New York with its thousands or millions of suburbanites and hundreds of news stands on railroad stations and ferry houses, and you ought to be able to get up a rattling good circulation." * * *

"I think a semi-monthly, such as you propose publishing, in the greatest city of the country, ought to be a success. It comes out often enough to give the fancier the news while fresh and interesting, and yet gives time enough in between issues to get up copy good enough from the literary point of view. For whatever may be said of a weekly, it must be gotten out under too great a rush to be anything else but a compressed poultry imitation of the English paper called "Tid-Bits." * * *

CHAS. JEHL,
Long Branch, N. J.

* * * *

Hundreds of our present subscribers have taken The American Fancier for years, and since we purchased it many have called to wish us success, while others have written words of encouragement. The old readers and advertisers have been most loyal in cooperating with us, and in return we are trying our best to publish The American Fancier as it should be; if we fail the fault will be ours and ours alone, for no publisher could receive a stronger support than that given us. This paper has the right kind of friends, and now it is up to us to prove that we are the right kind of publishers.

* * * *

July is the quiet month in the poultry business. Most all magazines are reduced in size and carry only a small number of their regular advertisements. It's hard to stir up a great amount of interest among the poultry men. We had to get our reading matter, illustrations and advertising in the dull month, as this paper went to press on July 27th.

* * * *

The management of the Great Allentown Fair are striving harder than ever to make the coming exhibition to be held September 17-20, 1907, a most complete and up-to-date poultry and pigeon show.

The officers of the Association have collected a most valuable collection of specials, and together with the regular premium money will make it an object for all to capture the honors at Allentown, Pa.

* * * *

Quite a number of new names will be found as judges in the premium lists of the coming Autumn and Winter shows.

This, we believe, is a particularly good feature. The same list of judges year in and year out will never help in bringing out a larger entry.

To be sure, the new judges must be competent, otherwise this change would be more harmful than good, but there are many very capable poultry fanciers to be found who, although never having officiated in this capacity, could do so creditably.

* * * *

Again we hear a great deal about incorporating the A. P. A., and it recalls to mind a report made a year ago by F. D. Bearman, Frederick L. Kimmey, and H. V. Crawford in which they reported adversely on the advisability on incorporating under the existing laws. Still many believe that the Association can be incorporated.

* * * *

The New York State Fair will be held at Syracuse, N. Y., September 9-14. For years past the State Fair has been one of the best of the Fall Shows.

The exhibition hall is well lighted, the birds are caged in Empire Coops, the classification caters to all varieties and the premium money most liberal. All in all, it is a most up-to-date Fall Show.

The system of locking the aisles at the State Fair is a good one, as it prevents a great deal of unnecessary interference, also greatly lessens the danger of stolen birds.

The entrance to all the cages are toward the locked aisle, making it impossible to obtain a bird except with permission of those in charge.

The prospects are bright for a most successful exhibition this coming September.

* * * *

The show dates on another page of this issue contain as complete a list as was possible to obtain at the date of this issue.

Secretaries of Fairs and Poultry Associations will confer a great favor to us if they will kindly send us the dates of their exhibitions.

* * * *

The Thirty-second Annual Convention of the American Poultry Association will be held at Niagara Falls, N. Y., August 13, 14 and 15, 1907.

The headquarters will be at the International-Cataract Hotels. The meetings will be held at Convention Hall of the Cataract Hotel.

Hon. A. C. Douglass, Mayor of Niagara Falls, N. Y., will make the address of welcome.

Many questions of importance will be discussed, also many debates, etc., relating to the poultry industry.

The following committees are to make a report at this convention:

Committee on Color-Plates for next Edition of the A. S. of P.

Committee on Proposed Standard for judging Dressed Poultry and Market Eggs.

Committee on Education Statistics.

Also quite a few amendments to the constitution of the A. P. A. have been placed in the hands of the acting Secretary-Treasurer.

Thursday, August 15, 7.30 P. M., is the time set for the banquet at the Clifton Hotel.

This will end a very strenuous three days, and we trust that the results will prove worthy of the endeavor. A meeting of so many clever poultry men should be of benefit to every poultry breeder. Will it?

NATIONAL RED FEATHER CLUB.

The first attempt to get out an authentic booklet of the club has brought before the breeders of Buckeyes a most complete booklet.

At the present time there are so few of this breed that the demand exceeds the supply.

The club is composed of a most energetic lot of members, who are working faithfully for the advancement of a most deserving fowl.

All breeders or those intending the selection of the Buckeye should join the club and help in the good work.

TENNESSEE STATE FAIR.

The greatest of all Southern shows. The Tennessee State Fair Poultry Show, Nashville, Tenn., Sept. 23-28, 1907. Judges: F. J. Marshall, Atlanta, Ga.; George Ewald, Cincinnati, O.; R. E. Jones, Paducah, Ky. Supt., John A. Murkin, Jr., Nashville, Tenn. Poultry institute in connection with the show. Special attention to pigeons, water fowls and pet stock. Liberal premiums. Valuable specials. Premium list now ready.

INDIANAPOLIS SHOW.

The eighth annual exhibition of the Fanciers' Association of Indiana will be held in the new Colosseum, February 3-7, 1908. This is one of the best show rooms in the United States, located on the site of the old market, in the heart of the city. Most liberal cash and special prizes will be given on all breeds and varieties; every premium guaranteed.

The Fanciers' Association of Indiana are members of the American Kennel Club, and a dog show will be held under their management on the same date.

Remember this is an incorporated association, and has sufficient money on hand to meet all obligations.

The poultry judges selected are: Jas. A. Tucker, Concord, Mich.; A. F. Kummer, Butler, Penn.; O. L. McCord, Danville Ill.; W. C. Pierce, Indianapolis, Ind.; S. B. Lane, Spiceland, Ind. Premium list out early; send for one. Theodore Hewes, Secretary, Indianapolis, Ind.

The National Single Comb Minocra club was organized in December, 1906, when a few prominent breeders of Single Comb Minorcas met and started work to get "Specials" together for the Madison Square Garden Show, N. Y., Jan. 1-5, 1907, and it was largely due to their efforts that the grand showing of Minorcas was made at that show, there being only two exhibitors of S. C. Black and S. C. White Minorcas, who were not members of the club.

The line of specials awarded by the club far exceeded those given by any other specialty club, and the club ribbons were admired by everyone.

The objects of the club are to increase the interests of the breeder of these varieties, aid in producing birds each year that will be nearer and nearer the Standard; to strive for harmony among its members; to have a club with equal rights to all members and special privileges to none and above all, avoid having a one-man club.

Each member in good standing will have a voice in all matters of interest to the club and his or her name will be published and sent to all fanciers throughout the country.

The board of officers elected for 1907 have pledged themselves to work together for the club's interest, for "In Unity is Strength," and if we all unite in our work, we can make this the largest and best specialty club existing.

A SUMMER HOUSE FOR BANTAMS.

By F. D. E. Stowe, Brattleboro, Vt.

SOME of your readers may be interested to know how I house my bantams in summer.

It suits me to take my breeding pens away from their winter quarters to a comfortable summer home. After trying a variety of houses, I have at last constructed one that suits my fancy

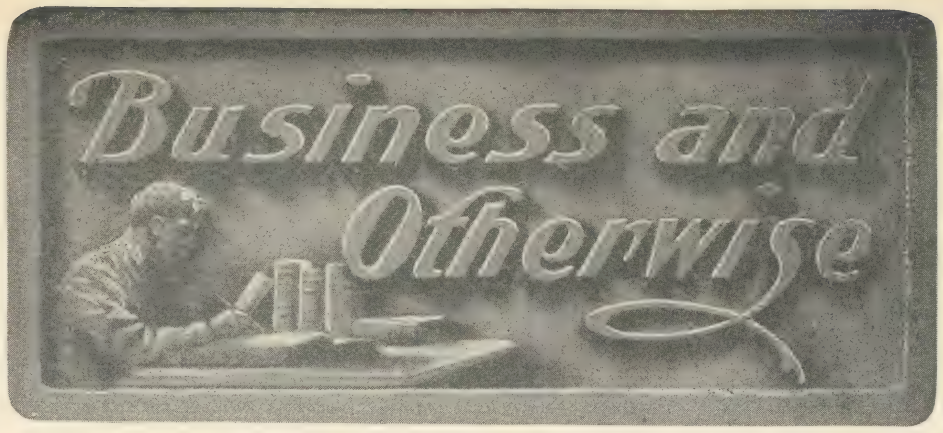
In view of economy I purchased a lot of wooden boxes containing boards of about one-half inch in thickness, and from them and some 2x3 ft., had houses of the following description built. The house part is 2 ft. by 2 ft. on the ground, with the floor about sixteen inches from the ground. The house in height is 42 inches front, and 37 inches rear. The sides and back are boarded. The front is covered with cotton cloth, down to withing a few inches of the floor, leaving space enough for the birds to fly to the floor from the ground. The top is of boards, covered with building paper, which, with two coats of paint, makes a good water-shedding roof. The whole top is hinged at the back, and provided with a hook at the front. To get at the stock, gather the eggs or clean the house, the roof is lifted. This gives an opportunity to keep the house clean and free from vermin. A wire run 6 ft. long, 2 ft. wide by 1½ ft. high, furnishes the yard. The open end of the run sits against the front of the house and a large hook connects the two to hold both in place and to protect against the winds.

Here, in a word, is the description of a home for from two to five birds.

Soon after the snow left last spring my breeding pens found a house of the above description their home. You remember the rain and the cold continued even into June, but the birds found good protection and health. Those that had colds when transferred to their summer house improved in their changed habitation. Now that the sun is so hot, bran sacking shelters the birds from the blazing hot sun. It annoys me to pass poultry yards which have no protection from the sun. Too often birds are driven into a house that is the shelter of innumerable lice. In any event they are without the comfort of a good outdoor shade.

The houses are not heavy, and from time to time the birds are given a new pasture by moving the whole establishment, which is done very easily.

If you do not keep bantams, make a little house and get some. You will find them very sociable, tame and interesting. Just break the crust of business now and then by petting your bantams.



MIDDLETOWN, CONN., SHOW.

The fifth annual poultry exhibition of the Middlesex County Poultry, Pigeon and Pet Association will be held at Middletown, Conn., January 7-10, 1908. This promises to be the poultry event of Connecticut. The exhibition will be held, as usual, in the Town Hall, which is the best adapted hall for that purpose in the state. The judges will be D. A. Nichols W. R. Graves and C. W. Bunnell, men with national reputations.

The officers of the association for the coming year are: President, C. R. Corey; vice-presidents, S. W. Starr, G. G. Whitmore, W. A. Pease and W. J. Kieft; secretary, A. L. Clark; assistant secretary, H. L. Northrop; treasurer, F. H. Smith, auditor, J. L. Fisk; executive committee, W. H. Shute, C. D. Armstrong, C. H. Chapman, Thos. Peddan, A. McArthur and F. W. Nicolson.

We invite all interested exhibitors to send for premium list and show with us.

ARTHUR L. CLARK, Secy.

THE AMERICAN FANCIER

Established 1893.

A Magazine devoted to Standard-Bred Poultry, Pigeons, and Pet Stock.

LEONARD W. LOTT *Editors* *HARRY M. POCKMAN*

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations

Expirations—Paper is discontinued at completion of subscription term. If a subscriber wishes a subscription continued he must notify this office and send the amount in payment for same. If this notice is marked with a large blue "X" it means that the subscription has expired. Renewal should be made at once to avoid missing a number.

Change of Address—When writing to change address, the old one must be given as well as the new.

Forms close the 10th and 25th.

The American News Co. will have charge of retailing the paper over the news stands throughout the United States.

Published by

Leonard W. Lott & Co.,

108 Fulton Street, New York.

ON May 16th Leonard W. Lott & Co. purchased the American Fancier and from this, our first issue, it will be published as an independent paper and not for the interest and advancement of any special combination of poultry men. The reading columns will be devoted to news and not "puffs," which are nothing more than disguised advertisements. This practice of giving undue praise simply because one is a big advertiser is an injustice to the small advertisers. Many happenings in the poultry world are worth calling attention to and should be published whether done by an advertiser or not.

Our show reports will be complete, without favor to any one, and where we believe a Judge or poultry exhibition should be criticised we are going to do it.

Breeding poultry is a business, and should be conducted upon modern business methods.

The people who have no better stock than you, but sell for twice the price, do so by advertising.

They have passed the experimental stage, have crossed over that portion of the thin ice of the business, and are upon a firm footing. They have ventured a few dollars in judicious advertising.

A big advertising sign set up where no one passes will not bring trade. Move it where the crowd can see it and get results. Try the advertising columns of the American Fancier. Forms for Aug. 15th issue close on Aug. 10th.

* * * *

Many men claim their failures are due to hard luck. Those who know, say it is lack of hard work. There is always a reason for success. It is not luck.

* * * *

Some people advertise to help out the editor, while others advertise to help their own business.

* * * *

Advertising rightly done must produce results. There is no danger of its not winning out, but there is a lot of advertising done purely for friendship, and this kind generally fails.

* * * *

THREE CLASSES OF READERS.

The beginner, the commercial breeder, the fancier—combined they make the right kind of circulation for a poultry magazine.

A paper for the beginner and commercial breeder will not interest the fancier, but a fancier's paper will greatly interest every beginner and commercial breeder. For years The American Fancier has been subscribed for by the largest breeders and leading exhibitors. It has been known as the fanciers' paper and will continue to be in the future as in the past, but its field has been enlarged by including the beginner without detracting from the fancier.

We worked two subscription campaigns and the result gives a wonderful expansion to the old American Fancier, for now as subscribers it has three classes of poultry men: The beginner, the commercial breeder and our old support—the fanciers, many of whom are wealthy men who breed merely for pleasure, and who subscribe to our paper only. They are big spenders and if the quality of the stock offered is worthy of their attention, we know of no better place to advertise it than in The American Fancier.

Our circulation contains the old and the new blood, thereby making it a valuable advertising medium. Subscribers are in every state in the Union and Canada, also Europe, Australia and South America. Anything for the beginner, commercial breeder and fancier can be profitably advertised in our columns.

While many of our subscribers read other poultry papers we have thousands who do not and the only way they can be reached is through the advertising columns of the American Fancier. Entirely different from other poultry papers. It is in a class by itself.

* * *

The foregoing matter was embodied in our circular mailed on July 15th to a number of the advertisers. Because it explains a very important thing—that is, our circulation—we have reprinted it here.

BUFF LEGHORNS.

By J. W. Wood.

Having bred poultry for seventeen years, I write from experience. Beginning with a trio of Bantams when eleven years old, I am still at it. During the first six years I tried many of the standard varieties but finding my mistake, as all beginners do, by handling so many varieties. Eleven years ago I settled down to one breed, the Leghorns, breeding brown, white and buff, but this was still too many colors, consequently four years ago I closed out the Browns and Whites to make a specialty of the Buffs. I have exhibited at some of the leading shows of the State, including the Illinois State Show, with success. I find the Buff Leghorn to be an ideal fowl for all localities, being well adapted to the city fancier, as their beautiful Golden Buff plumage does not so easily become soiled by soot and smoke as the Whites, and they are well adapted to the farm, not being so easily seen by hawks as the Whites. I find them easier to breed and more true to standard color, than the Browns, being a solid color. Good specimens of both sexes can be produced from the same mating, which cannot be done with the Browns. In egg production I find that the Buffs lay a larger egg than the Browns or Whites, and just as many of them. As broilers, the Buffs grow very rapidly, are very hardy, and at the age of twelve weeks will rival the Plymouth Rock in weight, and are always in better condition, being better feathered and less subject to pin feathers. In conclusion I will say there is not a better all-round fowl in the Standard than the Buff Leghorn.

THE CHICAGO SHOW.

The twelfth annual exhibition of the National Fanciers' & Breeders' Ass'n. will be held January 22 to 29 inclusive, (except Sunday) 1908. Officers for the ensuing year are E. B. Eddy, President; E. J. W. Dietz, Vice President; Geo. G. Bates, Treasurer, and Fred L. Kimmey, Secretary. The show will be under the management of the following committees: Finance: E. J. W. Dietz, Downer's Grove, Ill.; John C. Klein, Blue Island, Ill.; J. Lewis Draper, Marquette Bldg., Chicago, Ill. Judges and specialty clubs: Frank B. White, Electrical Bldg., Chicago, Ill.; Geo. G. Bates, Cor. West Monroe and Clinton Sts.; K. J. Muir, 1753 North Sawyer Ave., Chicago, Ill.; M. Wagner, 2663 West Fulton St., Chicago, Ill. Premiums: K. J. Muir, 1753 North Sawyer Ave., Chicago, Ill.; Fred L. Kimmey, Morgan Park, Ill.; J. Lewis Draper, Marquette Bldg., Chicago, Ill. Advertising and printing: E. J. W. Dietz, Thos. F. Rigg, Iowa Falls, Ia.; E. B. Eddy, 87 Washington St., Chicago, Ill.; John C. Klein, J. Lewis Draper and Frank B. White. Concessions: Fred L. Kimmey, Frank B. White and E. B. Eddy. Protest: E. W. Wickey, E. J. W. Dietz, K. J. Muir and M. Wagner.

FRED L. KIMMEY, Secretary.

"There was a girl's name and address on one of the eggs we bought of the grocer yesterday. It was written in pencil, and underneath were the words, "Please write." "Did you write?" "No." "Why not?" "I was afraid that the girl might have moved." "What makes you think so?" "After I had opened the egg I was pretty sure the address was several years old."

CLEVELAND PLAIN-DEALER.

"Advertising is recognized as indispensable to business prosperity; the only question that needs solution is how it should be done."

SHOW DATES.

Aug. 27-30, Cortland, N. Y., W. J. Greeman, Secy.
Sept. 3-6, Brookville, Pa., G. W. Stewart, Secy.
Sept. 9-14, New York State Fair, Syracuse, N. Y., A. C. Shaw, Secy., Albany, N. Y.
Sept. 17-20, Allentown Fair, Allentown, Pa., Theo. Wittman, Supt.
Sept. 23-28, Nashville, Tenn., Jno. A. Murkin, Jr., Secy.
Oct. 1-4, Poughkeepsie.
Oct. 1-5, Brockton Fair, Brockton, Mass., F. W. Rogers, Secy.
Oct. 8-11, Danbury, Conn.
Oct. 22-Nov. 1, Jamestown Exposition, Jamestown, Va., John A. Murkin, Jr., Supt.
Nov. 13-15, Manchester, Conn.
Nov. 18-23, York City, Pa., . N. Lovett, Secy.
Nov. 19-23, Richmond Hill, L. I., Robt. Seaman, Secy, Jericho, L. I.
Nov. 19-22, Marion Ohio, Frank H. Owen, Secy., Box 426.
Nov. 20-22, West Haven, Conn., E. J. Crawford, Secy.
Nov. 21-23, Englewood, N. J., N. R. Pendergast, Secy.
Nov. 25-30, Erie, Pa., A. A. Goldsmith, Secy., 714 Poplar St.
Nov. 26-30, White Plains, N. Y., Frank Gaylor, Supt.
Nov. 26-30, Dover, N. J.
Nov. 27-30, Mohinton, Pa., J. H. Fichthorn, Secy.
Dec. 3-6, Springfield, Mass., W. R. Graves, Secy.
Dec. 3-6, Johnstown, N. Y.
Dec. 3-7, Providence, R. I., W. I. Brown.
Dec. 4-7, Paterson, N. J.
Dec. 9-13, Augusta, Ga., J. W. Killingsworth, Secy.
Dec. 9-14, Fremont, Neb., O. K. Eckels, Secy.
Dec. 11-14, Brockton, Mass.
Dec. 11-13, Monroe, La., C. E. Faulk, Secy.
Dec. 11-14, Woonsocket, Mass., E. W. Cook, Secy.
Dec. 17-20, Elmore, Ohio, Geo. W. Gehring, Secy.
Dec. 17-20, Haverhill, Mass.
Dec. 17-21, Evans City, Pa., J. F. MacFarland, Secy.
Dec. 19-21, Worcester, Mass.
Dec. 17-21, Bradford, Ill., L. H. Eldrige, Secy.
Dec. 17-21, New York, N. Y., H. V. Crawford, Secy.
Dec. 30-Jan. 4, Scranton, Pa., A. W. Close, Secy.
Dec. 31-Jan. 3, Meriden, Conn., J. Shute, Secy.

SPECIALTY CLUBS.

American Poultry Association—Pres., C. M. Bryant, Wollaston, Mass.; Vice Pres., H. V. Crawford, Montclair, N. J.; Secy and Treas., Ross C. H. Hallock, St. Louis, Mo.
American Dorking Club—Secy and Treas., Robt. Officer, North Grafton, Mass.
American Light Wyandotte Club—Secy. and Treas., W. R. Graves, Springfield, Mass.
American Light Brahma Club—Secy. and Treas., John Rumbold, Baltimore, Md.
American Buff Plymouth Rock Club—Secy. and Treas., C. A. Morton, St. Louis, Mo.
American Rose Comb Brown Leghorn Club—Secy. and Treas., Fred'k Alger, Waukau, Wis.
The National Bantam Association—Secy., Geo. L. Young, Brooklyn, N. Y.
American Polish Club—Secy. and Treas., M. V. Caldwell, Leetonia, Ohio.
National Red Feather Club—Secy. and Treas., R. P. Searle, 1118 E. Bancroft St., Toledo, Ohio.
National Single Comb Black Orpington Club—Secy. and Treas., Jos. Coleman, Belleville, Ohio.
The Faverolles Club—Secy. and Treas., M. J. Whitty, Malden, N. Y.
Rhode Island Red Club of America—Secy. and Treas., E. L. Prickett, Hazardsville, Conn.
Cornish Indian Club—Secy. and Treas., F. H. Williams, Minneapolis, Minn.
American Black Minorsa Club—Secy, Geo. H. Northrup, Raceville, N. Y.
National Single Comb Minorca Club—Secy,. H. W. Billard, Brooklyn Hills, N. Y.
American Exhibition Game & Game Bantam Club—Secy., B. C. Fincke, Short Hills, N. J.

JAMESTOWN EXPOSITION.

THE Jamestown Exposition Poultry show will be held in the Convention Hall, just inside the main entrance on the Exposition grounds, October 22 to November 1, 1907. This is the most desirable location on the grounds. The latest equipment will be provided, and every precaution taken for the care and comfort of the birds. Liberal premiums will be offered, and it is proposed to make the Jamestown Exposition Poultry show one of national importance. Exhibitors, with their birds, will be there from all sections of the United States. America's foremost poultry judges will officiate, and nothing will be spared by the management to make this not only the greatest poultry show ever held in this country, but a notable gathering of poultry breeders, the like of which has never before been seen.

We want every poultry association and specialty club in America to cooperate with us in making this the "world's greatest poultry show," and we take this opportunity to invite your association, through you, to participate in this great poultry event. A winning at Jamestown means the best on the continent. No breeder can afford not to exhibit his birds at this great exposition.

The following judges have been appointed to judge at the Jamestown Exposition Poultry Show: T. F. Rigg, Iowa; J. H. Drevenstedt, New Jersey; F. J. Marshall, Georgia; A. F. Kummer, Pennsylvania; W. S. Russell, Iowa; Geo. E. Knebel, Texas; Chas. T. Cornman, Pennsylvania; T. Reid Parrish, Tennessee; W. J. Stanton, New York; W. C. Denny, New York; R. E. Jones, Kentucky; T. M. Campbell, Indiana; Frank Shaw, Indiana.

Premium list and entry blanks will be ready Aug. 10, 1907. Entries close October 1, 1907.

Messrs. Theo. Hewes of Indianapolis and E. L. Doak of Nashville, Tenn., have been appointed to assist John A. Murkin, Jr., the superintendent.

MOHNTON PA.

The third annual exhibition of the Wyomissing Poultry and Pigeon Association will be held Thanksgiving week, November 28-30, 1907. It is expected that the entries of this year will be twice the amount of last year. The association is busy making hundreds of new coops. The officers are: President, J. G. Werner; vice-president, J. H. Fichthom; treasurer, A. O. Fisher; superintedent, J. H. Fichthom; secretary, Geo. W. Watt; assistant secretary, Dr. M. S. Miller. Judging will be done by W. J. Stanton, N. Y.; W. Theo. Wittman, Allentown, Pa., and F. G. Bean, Collegeville, Pa.

We wish to extend a cordial invitation to the fellow fanciers to exhibit with us. Our motto is "fair play to everybody." For information, write to the secretary.

MELVIN H. COFFIN
President of Partridge Wyandotte Club of America.
Elected at Boston, 1907.

RHODE ISLAND RED CLUB OF AMERICA.

Although there have been many predictions made that the Rhode Island Red Club of America was a dead one and would soon fade away, the club has made a wonderful growth this past year and a healthy one. At the beginning of 1906, there were about 445 members. After being duly notified, 61 of these were dropped from membership; 5 by request and 56 for non-payment of dues. Since the Cincinnati Meeting in January, 1906, we have added to our list 260 new members, making a total of 644 members, and rapidly increasing daily.

GREAT ALLENTOWN FAIR.

The special committee of the Allentown Fanciers' Association, appointed for the purpose of securing special premiums for the next Allentown fair, met in the office of George W. Eckert. The committee was able to report that up to date over $2,000 in special prizes have been received and still more are forthcoming. These prizes consist mostly of cash and handsome gold and silver cups.

The special committee consists of George W. Eckert, Ray S. Brown, Adam Noll, Edward Noll, David Kehm, W. T. Wittman, Stephen Burger, Oliver Brey and John Kreiner. They have done excellent work in securing the special prizes.

The prizes will be awarded to winning classes of poultry, pigeons and pet stocks.

It is the intention of the Allentown Fanciers' Association to hold one of the finest shows at the next fair that has ever been aranged in this country.

THE TENNESSEE STATE FAIR.

The Tennessee State Fair Association will hold its Second Annual Fair in the City of Nashville, September 23-28, 1907.

You are no doubt aware of the fact that this fair is recognized as one of the greatest Fairs in the United States.

The management were so well pleased with the reception accorded the poultry show at the Fair last year and the tremendous success attending same, and realizing as they do the importance of this great industry to the people of the State and South, they have decided to offer $1,150.00 in cash premiums.

In this department this year, besides there will be a $50.00 silver cup, $25.00 banner gold special and other attractive special premiums.

The pigeon and pet stock department of the big poultry show will be a prominent feature.

A poultry institute will be another big feature of this show, free to those interested in raising poultry. The best lecturers and demonstrators have been engaged to instruct those attending the institute, which will be located on the grounds and continue the entire week of the fair.

Another feature will be the exhibition yards, where flocks of the various breeds of thoroughbred poultry will be exhibited under natural conditions. A big egg laying contest is now being arranged.

All of these, besides other attractions, aside from the great poultry show, will make the poultry section the greatest poultry event ever arranged by a state fair.

Nashville, besides being the greatest poultry center of the South, is now recognized by the breeders over the entire country as one of the greatest poultry show cities in the Union. A winning at Nashville means much to the poultry breeder. A winning at Nashville is a valuable asset to any poultry plant. Come and bring your birds.

JOHN A. MURKIN, Jr., Supt. Poultry Dept.

BUFF PLYMOUTH ROCK CLUB.

It has been suggested by our president, Mr. D. M. Green, that a silver cup, to be known as the New York State Challenge Trophy, be offered at one of the poultry shows in New York State this fall or winter, as the majority might wish, the same to be competed for by State members only.

FAVEROLLES CLUB.

Prospective judges of Faverolles at the coming fall and winter exhibitions will be furnished with a copy of the club standard free on application to the secretary Mr. J. Whitty, Malden-on-Hudson, N. Y.

EVANS CITY, PA.

The Evans City Poultry and Pet Stock Association will hold their first annual show December 17-21, 1907. Judge H. A. Emmel, Mars, Pa., will judge the show. The show will be held in the Fireman's Department Hall, the most commodious and well lighted hall in the city. This show promises to be one of the best and well governed shows held in Western Pennsylvania. Send in your applications.

August 1st will find most of the leading breeders separating their birds.

Few, if any, birds are raised after this date that ever grace the show pen with honors.

As soon as the parent birds begin to moult the breeding season should end.

One of the greatest evils in the pigeon loft is canker, and to keep the birds breeding during this period is only inviting the disease.

* * * *

In another column will be found a very interesting article on the Scandaroon. Although never attracting the attention of the fanciers in general, Scandaroons have quite a following, especially in England.

* * * *

Reports from most fanciers show that this breeding season has been quite a success for quality, but not for quantity. The early rainy season was not productive to a very large crop of 1907 banded youngsters.

* * * *

Another month and the show season will start in earnest. There are a few, and only a very few, of the Autumn Fairs which give the pigeon department the proper attention. We see no reason why successful pigeon exhibitions cannot be held in connection with the fairs. Showing in pairs, owners to furnish coops, is certainly very encouraging, and will no doubt bring out a very high quality of stock.

* * * *

The squab industry is attracting the attention of a great many. Whether or not it is a paying proposition is entirely with the person himself.

Many have made money in the squab business, and still many have made a failure.

The pigeon fancy will be greatly benefited in general, as many, after trying the raising of squabs, with its vast amount of labor, will later be attracted to the fancy varieties, and thus the fancy is increased with a loyal supporter.

* * * *

Last show season brought together a grand display of both exhibition and working Homers. Quite some discussion was caused by the manner in which some of the judges handled the classes.

Show Homer blood has certainly been used in producing the ideal exhibition bird of to-day. This can readily be seen in the head properties. Although we do not like to see too much of this Show Homer type in the exhibition bird, we must admit it has certainly improved the head properties.

At the last New York Show the judge was most severe, and passed many a grand bird on account of head properties resembling the Show Homer.

If one observes closely the standard bird of these two distinct different varieties, they will readily see the Show Homer is a down-faced bird, whereas the exhibition is straight in neck.

THE CLEVELAND PIGEON CLUB.

Well we had our third meeting of the Western Reserve Pigeon Fanciers' Club, of Cleveland and vicinity, and we had one round of pigeon talk at the residence of Mr. J. H. Brickman, and the boys are all well satisfied with the prospects of the late year in the pigeon world. Everything from a common to a Fantail and Pouter was discussed, and Mr. Brickman was very liberal with the stogies, and showing us his different varieties, which are coming on nicely.

The pigeon fanciers in Cleveland and vicinity do not know what they are missing in not becoming one of us. We have added Mr. Kloepfer and Dr. Wiedenthal to our list.

We were all glad that the Board of Health did not pass the law keeping pigeons 25 feet from a dwelling, and we are very thankful to them for the courtesy shown us. The pigeon fanciers of Cleveland can thank the Western Reserve Pigeon Fanciers' Club and the Homing Clubs for having the bill defeated. I think if every pigeon fancier would belong to a pigeon club he would benefit by it and enjoy the different arguments they have. Our next meeting will be held at Mr. C. Froelk's in the near future for further discussing the betterment of the pigeon fancy.

J. H. KRAMER, Sec.
4168 Pearl Rd. S. W.,
Cleveland, Ohio.

THE ST. LOUIS HOMING PIGEON CLUB.

Editor American Fancier:

At the last meeting admitted three new members.

This makes our total membership 12, and we are only six weeks old.

President Sadler offered a silver cup to any member who has a 500-mile bird in the same day.

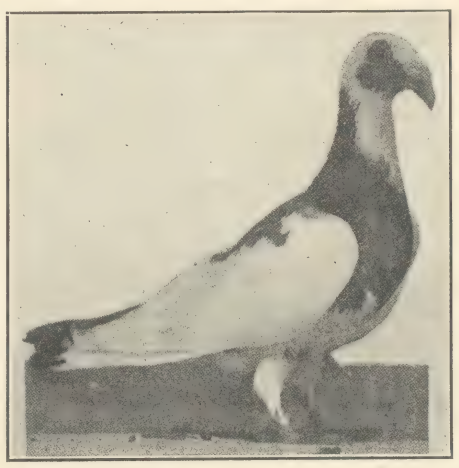
If it is accomplished, this will be the first time in St. Louis.

We expect to make a good showing with our birds, and hope that the records will be equal to any.

The interest in the cup is running high.

The Club desires to thank you for printing our past letters.

V. C. HARWOOD, Sec.



A Minnesota duck which had faithfully stuck to business during the summer, and laid several dozen of large fawn-colored eggs, complained that she was not appreciated. "See that hen over there?" said the duck. "She hasn't laid as many eggs as I have, nor as big, but she has books written about her and verses composed in her honor, while nobody is saying a word about me." "The trouble with you is," said a wise rooster that was standing near, "that you don't tell the public what you have done. You lay an egg and waddle off without saying a word, while that sister of mine never lays one without letting everybody in the neighborhood know it. If you want to cut any ice in this community you must learn to advertise."—St. Paul Dispatch.

THE SCANDAROON.

I should advise all fanciers who intend going in for this variety to start with one pair of birds of a good winning strain. Never mind the markings or whether the birds are "pretty" or not, for it very frequently happens that mismarked birds produce excellent youngsters. This I have experienced myself over and over again.

It is very essential, however, that birds which are intended to be the forerunners of a good strain should have good substance of beak and good body stature. For instance, let us suppose a cock to be heavily marked—that is to say, having its breast markings extending nearly all the way to its thighs, having its saddle practically covering the whole of its wings excepting the flights, or showing very little bib and heavy cheek markings. I should select, for a bird of this description, a hen which might possibly have no breast markings at all, or, at any rate, very little, and with little or no cheek markings. From this mating one might expect to get something near the proper markings, but if the youngsters from this pair were heavily marked I should take the young cock and pair back to the old hen in the next season, and it would then be possible that from this mating an almost perfectly marked pair would result. For the young hen I should endeavor to obtain a lightly-marked cock.

In a case like that of the old pair referred to above, it would be practically certain that both the cock and the hen would have been bred from heavily-marked parents, this being shown in the heavily-marked youngsters. Of course, this will apply to pied birds of any color.

A Promising Scandaroon.

By pairing in this manner, and keeping an accurate register of the results, the young fancier will soon be able to form a pretty certain idea of what his youngsters will be like. He must not, however, expect to start and breed show specimens straight off the reel, but must have patience, and plod steadily along. I think that this is the advice which would be given to him by any of the competent breeders of the day.

I have never found any difficulty in disposing of my surplus stock at a fair figure .

I should like, before actually beginning my subject, to point out that during the past years I have not confined myself to Scandaroons alone, but have kept nearly every known variety of fancy pigeon, and have been fairly successful with them at many shows.

I started as a boy with white Dragoons, and am still a great admirer of that variety. My experience of the Scandaroon dates from about ten years back. Up to that time I had kept a rather miscellaneous collection, but finding that I had neither the time nor space to properly study and care for so many varieties, I decided to confine myself to one kind, and ultimately fixed upon Scandaroons.

The Scandaroon is a native of Asiatic Turkey, although it seems to have been bred and almost naturalized in Germany and Belgium, from which countries many of the birds from which our British strains have descended seem to have been imported.

The Scandaroon is undoubtedy one of the pioneers of the fancy pigeon of to-day, and I often wonder why it has not become more popular among fanciers, many of whom owe some of the most admirable points of their birds to it. For example, I know from my own experience that this variety has been greatly used by fanciers of the Show Homer to obtain that length of muzzle and arch of skull which is so much desired by them. The long-faced Antwerp is, without doubt, much indebted to the Scandaroon for its length of head, and so are red and yellow Dragoons for their brilliancy of color, as there is perhaps no variety in which so lustrous a color is to be found.

I generally pair up my birds about the first week in March, and separate them about the last week in July. They will then, as a rule, go almost immediately into moult, and will then be in the pink of condition for the winter shows. I prefer, whenever possible, to pair up color to color; that is to say, black to black, red to red, etc.

During my ten years' experience with Scandaroons, I have found that they are very prolific, a good pair producing and bringing up as many as from three to four pairs during an average season, this being quite sufficient strain for the birds in one year.

I like, whenever possible, to keep only one pair in a compartment of, say, about 6 ft. square, but it is never wise to put more than two pairs in a compartment of this size, the reason being that the birds are of a rather wild nature, and, being strong and vigorous, are apt to fight, being liable in so-doing to injure each other.

Scandaroons are very good feeders as a rule, bringing up their own young without any difficulty, thus avoiding the necessity of keeping feeders, which to a fancier with limited space is always a disadvantage.—Feathered World.

PIGMY POUTER PALAVER.

IT seems to be the wish of the members to settle early the matter of the date and place of our next annual meeting and selection of club judge.

This is a splendid idea, which will undoubtedly be carried out.

So it will be well for the members to think on the subject that they may be able to vote intelligently and promptly when the voting slips come before them in the near future, and without subsequent regret at the result.

I might add that those who have not paid their dues will receive no ballot. I wish to urge prospective members to get in at once, that they may be assured a voice in this matter. Ample notice, however, will be given after hearing from the show associations.

I would like to have every show secretary wishing our meet make a bid as soon as possible. Owing to the migratory mood in which the members are, every large show has a chance to land the meet, and as two hundred or more birds is our usual exhibit, the show that wins us is truly lucky.

Much favorable talk has been heard about going west this year, and for one I must say it is our duty to the western members to hold our meetings west more frequently than heretofore.

It is, of course, true that they are in the minority and it cannot be expected that the majority will consent to sending their birds so far away from home as often as to the eastern and nearer by shows, so it reverts to the long-

standing question, why don't western men join the clubs?

Were they to gather as many members as the east can put forth, the east and west bugbear would at once vanish. There are many more fanciers in the west than east, but look how few join the clubs, not only the Pigmy, but every club.

I have been advised that the Cleveland Fanciers' Ass'n. have joined with the Cleveland Show Ass'n. with the view of obtaining as many specialty clubs as possible to meet there this season by offering liberal inducements in the way of specials.

An offer to the Pigmy Club is looked for shortly.

The reduced size of this year's bands has been called to my attention by "Pigeons," which says they were made smaller by direction, or the consent—or words to that effect—of the secretary of the Pigmy Club. As said secretary, all I have to say is that someone is "Nature Faking" and it is up to Messrs. Ewald and Whitney to decide which one is "It."

I noticed the bands are smaller and that is the first intimation I had of the fact and that I was consulted as to the size they should have been made, is not true. I would not say, however, that some officer of the club did not sanction the change; I cannot say that he did. Under any circumstances it is a matter for the executive committee and the subject has never come before that body.

I will say, without fear of contradiction, that the bands are too small; the bird has to be handled too young, a day's delay will prevent banding and I daresay induce some breeders to put on a last year's band which can be used several days after the bird is barred from the 1907 class. I am also of the opinion that in many instances where a bird is large boned or heavily booted that the band will have to be removed.

While on the band theme, I see that Secretary Whitney is having his troubles, the principal cause being the shortage of some sizes. Now, it has occurred to me that as each size is adaptable to several varieties of pigeons, if each size was made up in the several colors and a color set aside for each of the varieties there would not be a shortage for all the varieties wearing one size band, but only for the variety wearing a certain color of that particular size. Hence not so many fanciers would be disappointed and the secretary would not receive so many discourtesies and insinuating letters, which, by the way, bring the writer nothing—but a lemon. It seems to be the universal understanding that a secretary is common prey for all the members of a club and he is expected to take all the "jibes," "knocks" and "near-insults" handed out from all quarters and answer with a smile. Fortunately, however, he don't, and even though he appear to, "things are not always as they seem."

E. C. DUFFY, Secretary A. P. P. A.

THE MOULTING OF PIGEONS.

THE moulting season is an anxious one with most fanciers; anxiety is caused during its progress in many ways. It is during the moult that many a promising youngster is made or marred. The moult it is which finds out the weak spots in a bird's constitution, and the moult it is which causes to develop faults and failings not seen in the first feather. On the other hand, it must also be said that many a bird little thought of before the moult blossoms out into a winner of firsts, specials and cups owing to the care bestowed upon it, and by the manner in which it comes through the moult.

The moulting, or the changing of plumage in birds, is like unto the shedding of their foliage by the trees. The process is somewhat similar, and yet it is altogether different. Similar in so far as the shedding of the plumage is concerned, but totally different inasmuch as a bird, in addition to shedding its old coat, has to grow a new one at the same time, a process which the tree delays till the springtime. The leaves on a tree grow and grow till such time as their veins are filled with the matter from which they obtain life. There is then a suspension of the growing process, the leaves hold on for a time, but owing to the fact that in leaves, as in other things, there can be no life without circulation, so after a time the leaves begin to wither and then drop off. In somewhat the same manner does a feather grow, then gradually loses its strength and drops away.

To thoroughly understand the moulting of a pigeon, one needs to have some knowledge of the structure of feathers. If we take a feather and carefully examine it, we find that it is, roughly speaking, composed of three parts—the quill, the shaft, the vein. By the former is the feather held to the skin of the pigeon, the shaft grows out of the quill, running up the centre of the feather, and to the shaft is the vein attached. The feather grows and is nourished directly from the blood through a small opening at the bottom through which the sustenance for the feather is drawn during the whole time it is growing. This, like the veins of the leaves of a tree, in time becomes choked by the accumulation of the secretions of chemical matter, and the feather, like the leaf, falls away from its support, because it is no longer nourished and strengthened.

The moulting process is marvelous when one comes to think of it. At this time the pigeon, in common with other birds from the elements contained in its own body, produces the forces which cause its old coat to be cast off and a new one to grow in all its living, glowing pristine beauty. We are so used to this wonderful process that we never stay to think of its miraculousness. Did we first see a bird moult without knowing anything about it we should be awe-struck by the wonderfulness of the mystery; but because we grow up with it, and our eye is trained to it, we fail to stop and think of all that the process is and means.

In the moulting of a pigeon the old is replaced by the new, as in many other things. Life produces life, and from the decay of life fresh life springs. The moult commences by the desication of the old feathers; the quills become dry and sapless, all the sap is dried out of them, they lose their strength and firmness, the web loses its lustre and depth of color, the quills shrink within their sockets, the surrounding skin becomes shrivelled, and like the leaves on the trees they drop off.

Immediately the old feather has dropped out the new begins to fill its place, even if it, like the second tooth of a child, has not already had something to do with the ousting of its forerunner. It is obvious to all, even the merest tyro in natural history, or ornithology, that the time of the moult must of necessity be a time of severe strain to the birds. Not only have they to keep up the natural forces of their body, but they have also to supply from the source of these forces the material, or food, to grow another crop of feathers. This must naturally have a most exhausting and enervating effect upon the internal economy of birds undergoing the process. This being so, it becomes our duty to see what we can do to assist our pets to go through the moult with the least amount of discomfort possible.

First and foremost we know that warmth is a most desirable and necessary factor in the accomplishment of a quick, healthy and successful moult. A quick moult is usually a healthy moult, and a healthy moult is, generally speaking, a successful one. Nature herself has chosen the most fitting time—end of summer, when the earth is full of heat from the rays of the sun which have been pouring down upon it for some weeks, and which keeps the nights almost as warm as the days, as at night, when the sun is not shining, the earth gives of its stored heat, thus equalizing the temperature of day and night. To secure the full benefit of this provision of Nature we want to see to it that the moult in our stock is not delayed. An early moult is a quick one. A late moult is a slow one, caused by the fact that the atmospherical surroundings are not so favorable, and that as a consequence the moult is retarded, and very often unforeseen and undesirable complications ensue.

Warmth being an essential factor in a successful moult, fanciers should see to it that their birds are enabled to get the full benefit of all the warmth which the sun gives, and that they are protected from draughts, and also from damp. Draughts and damp are fatal to pigeons under any circumstances, more especially during the moulting season. So serious are the effects of a chill caught by exposure to draught or damp during the moult that they often check the moult altogether, causing the birds unnecessary pain, checking the moult with consequent illness, and sometimes death, and even if death does not supervene, the birds are reduced to a poor state of health, and never recover sufficiently from the effects of the bad moult to be ready to take their places in the breeding pens later on. During the moult birds are more or less without their full complement of clothes, and thus are very liable to attacks of cold or chill. Therefore, is it the more necessary at this time to exercise the greater care in their management.

During the moult the feeding should be of a liberal and generous character. The corn given should be of the very best, and may contain a fair quantity of wheat and maize, that is compared to what is given at other times of the year. The wheat is somewhat laxative in its nature, thus keeps the bowels working freely, whilst the maize is stimulating and fattening, and thus does good service at this time in that it keeps flesh on the bodies of birds that might be apt to get low in condition. "Poor doers," as such birds are called, are much helped by a little maize during the time they are in the moult. If the dietary consists of equal parts of maple peas, tares, wheat and maize for the stronger varieties, good feeding will be provided, whilst for the smaller, and more delicate, not necessarily more delicate in constitution, but in appearance in feather, and general character, using the word more in the sense in which it is connected with things beautiful. Another most valuable adjunct of the dietary table of all pigeons during the moult is Spratt's Pigeon Food. Being a cooked food, it is so much more quickly and easily digested than raw grain. Thus it provides the birds' systems with nourishment without half the expenditure of nerve force that grain needs to digest it.—Pigeons and Poultry.

UTICA POULTRY AND PET STOCK ASSOCIATION.

The Utica Poultry and Pet Stock Association has just been incorporated under the laws of the State of New York with a capital stock of $1,000 at $10 per share par. This Association is the outgrowth of the Central New York Poultry and Pet Stock Association that held such a successful show at Utica, N. Y., in January just passed. It was the intention to continue under the old name, but the State corporation laws would not admit of this.

The Association is starting off in a flourishing condition, and the fact that the stock is already more than half subscribed speaks well for it. Many prominent Central New York Poultry Breeders are numbered among the stockholders.

Plans for the next show, which will be held in Utica during the week of January 13 to 18, 1908, are already under way. Contract for cooping the show has been let to the Empire Cooping Co. No effort or expense will be spared to make this the largest, as well as the best, show ever held in Central New York, and to that end the premium list will be made attractive.

A. W. Jones, who so ably superintended the last show, will act in the same capacity at the next show, and C. R. Coppel has again been chosen secretary, and they will strive to uphold the motto of the Association, "A square deal to all."

The officers and directors for the first year are A. G. Warner, New York Mills, president; A. W. Jones, New Hartford, 1st vice-president; J. Burth, Maynard, 2nd vice-president; C. R. Coppel, New Hartford, secretary; W. D. Vosburgh, Utica, N. Y., treasurer.

WESTCHESTER COUNTY SHOW.

The Westchester County Poultry, Pigeon and Pet Stock Association will hold their second annual show Thanksgiving week, November 26-30, 1907, in Dot's Hall, Levington Ave., White Plains, N. Y. This show will be up to date in every respect. W. C. Deney and Geo. W. Weed will judge the poultry and W. J. Stanton the pigeons. Frank W. Gaylor is superintendent and Herbert R. Foshay assistant superintendent.

ERIE, PA.

The Northwestern Penn. Poultry, Pigeon and Pet Stock Association will hold their thirteenth annual, Thanksgiving week, November 26-30, inclusive.

We shall endeavor to make this the banner show of Western Pennsylvania. F. A. Kellar will place the awards. Liberal cash and special premiums, as well as silver cups, will be given.

Breeders are requested to drop a postal for premium list, which will contain full information. Write to secretary.

A. A. GOLDSMITH,
714 Poplar St., Erie, Pa.

Over 14,000 misdirected letters are received every day in the week at the Dead Letter Office at Washington, and according to the assistant postmaster general, it is all due to the neglect of the writers to place their own names and addresses on the left-hand corner of the envelope.

Next to laying, their chief characteristic is the peculiar crown-shaped comb. Harry Kauffman, Milton, Pa.

ROSE COMB BLACK MINORCA HEN.
She has the long body and back.—GEORGE H. NORTHRUP, RACEVILLE, N. Y.

THE TROUBLE WITH HER DUCKS.

Miss Kate Landborn tells of an experience she had in raising ducks. The ducks proved to be enormous feeders and were consuming the profits of the farm without making the expected returns in eggs. One day the ducks were at the kitchen door, clamoring for more food, when an old farmer called.

To him Miss Landborn told the story of her failure to coax the ducks to lay. The farmer looked at the ducks, then at Miss Landborn and finally said:

"The trouble with those ducks of yours, Miss Landborn, is that they are all drakes."—Exchange.

* * * *

All the pure breeds of geese have both sexes alike in color.

Pinch a duck or goose and it will give a sound of dislike and betray itself. The male has a fine, squeaky voice, while the voice of the female is loud and coarse. The male guinea chatters, but the female makes the familiar repeated sound of "Joe Clark." The chicken hen cackles and the male crows. It is not usually difficult to distinguish adults, but whenever there is doubt, the voice is the surest indicator.

THE VALUE OF ACCOUNTS.

If only a few fowls are kept for a family, and partly kept out of household scraps, the time and trouble of accounts are not worth while. But when we get beyond this modest scale, regular accounts are not only advisable, but almost essential to success. Some poultry breeders and exhibitors turn over quite large sums in a year. These always keep records. But farmers especially should keep an account, and the neglect of this is the common cause why so many have a bad opinion of poultry Every little expense is exaggerated.

* * * *

The following well-known authors have formed a company for the purpose of raising poultry: Gertrude F. Atherton, Katherine Glover and Poultney Bigelow They are directors in the Malden Poultry Farm of Malden, town of Saugerties, which filed articles of incorporation with the Secretary of New York State. Capital stock, which is $4,000, is all paid in.

PROFITS IN POULTRY KEEPING SOLVED.

Title of my new book, which is revolutionizing the poultry business all over the country. My great feed at 10c. per bushel, will save you $25.00 a year, on every 100 hens you feed, as well as increase your egg yield over 30 per cent. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1¼ to 1½ lbs. in seven weeks on it. No science required to feed my system. Are your pullets laying at four to five months old? If not, you have fed wrong. Failures impossible where my system is used. My second edition of 3,000 copies revised and enlarged now ready. Write to-day and stop that big feed bill.

Circulars and testimonials free.

POULTRY RAISING.

By James G. Halpin, Agricultural College, Mich.

Early Layers.

Frequently a pullet starts laying before the others and continues to lay well all the year; such a one should be carefully watched and her eggs saved, providing sufficient size was attained before she began laying. Other pullets will lay a few eggs in the autumn and then cease until spring; these should, of course, be discarded. Those that begin laying prematurely are not desirable, as they should attain the size characteristic of their breed before commencing, and then lay continuously during the rest of the fall and winter. Pullets of the smaller breeds frequently begin laying at five months of age, but these are usually too small, and although they may lay constantly, are not large enough, or strong enough, for parent stock. Select the pullet that grows to a good size quickly and lays continuously for a long period.

Selection According to Form.

Many rely on selecting their best laying fowls by merely studying the form, or in other words, they believe that there is a characteristic egg type. Trap nest records seem to indicate that this rule is variable to some extent, at least. One should be able to select by form with fair success, as it has been noticed that hens with crow heads, that is, long, peaked heads, are

seldom good layers. The same is true of hens that are unusually long legged. All those that are crooked breasted, or in any way deformed, should be discarded, not for fear that the chicks will inherit the deformity, but because it shows a weakness; a bird with a crooked breast cannot present a very good appearance on the stand in the market. It is essential, however, to know by form and type which ones should be kept. Some of the most important factors relating to form, aiding in selection are embodied in the following: A triangular to shape, with deep, broad bodies, showing a large capacity for egg production, well sprung ribs and flat backs that broaden out toward the rump. Some claim that they can readily tell the good producers by a large space between the pelvic bones. Careful examination of a number of hens will show that in some cases, at least, there is a variation in the distance between these bones.

Selection of Good Feeders.

The appetite of the hen is some indication as to her productive capacity. Those with good appetites will meet one at the door at feeding time and, if at all tame, may hop on to the feed basket. They will scratch the litter about the pen in a vigorous way in search of hidden grains, and may be heard singing away contentedly as they work. They will always be active, never drooping around the pen or staying on the roosts after the others have left; in fact, the first hen about in the morning may usually be considered one of the best producers. The reason for this is simple. If she requires just food enough to supply the wear and tear of the body it will not take her long to secure it, but if she is a good egg manufacturing machine, a large supply of fuel is needed to keep the mechanism running. The fuel furnishing this energy is found in the food consumed.,

Selection and Age.

A question that attracts considerable attention relates to the age of the hens to produce eggs for incubation. Many people disapprove of eggs from pullets, but we believe those secured from pullets that have laid all winter and from yearling hens with good records are the most satisfactory. Extra good producers may be kept for breeding stock until their third or fourth year, or even longer, but usually hens coming two years old make the best breeders. But if hens have extra good records they should be kept as long as they continue to do well. It would be a decided advantage if we could breed hens capable of maintaining a high standard of production for several years. All of the large farms specializing in egg production would gladly pay an extra price to secure foundation stock that could be used profitably for several years. On many of these farms chicken raising is a great trouble and expense; the cockerels are considered a by-product to be disposed of as soon as possible. Hens bred especially to lay which do well for one year only should be fattened.

Mating.

Having selected the hens that are suitable to produce eggs for hatching, see that they have good, clean, comfortable quarters, with plenty of fresh air, and all the sunshine possible. Mate them with a good, strong male which comes from productive ancestry. The male is half the flock and if his dam and granddams were producers of two hundred eggs per year he should be worth much more as a sire than one whose dam produced but half that number. The question is often asked, how many hens should be mated with one male? This varies with the individual and the breed. The best results are usually obtained by keeping about fifteen of the American class (Plymouth Rocks, Wyandottes, etc.), with one male, while with Mediterraneans (Leghorns, Minorcas, etc.) one may keep as high as twenty-five, while in special instances as high as fifty have been known to give strong, fertilie eggs from one male. The Asiatics (Brahmas, Cochins and Langshans) are not as active and usually from seven to ten is about the proper number. Having allowed the male to run with the flock for a couple of weeks it is safe to begin saving eggs for hatching.

Eggs for Hatching.

One should be as careful in selecting eggs for hatching as in selecting parent stock. Choose medium to large eggs, as nearly perfect in shape and color as possible. Uniformly colored eggs look much better than a mixed lot and will usually sell better. Some select the short, round eggs, believing these will produce a large percentage of pullets; but the shape of the eggs has nothing to do with the sex of the chick. Continuous selection of the roundest eggs will gradually produce a strain of hens that will lay round eggs of imperfect shape. Some hens habitually lay eggs flattened on one side, others lay long, pointed ones, while still others lay those with porous, crumbly shells; such hens should be removed from the breeding pens as soon as discovered.

Shipping Eggs for Hatching.

In shipping eggs for hatching, great care must be taken to prevent injury in transit. There are several methods of packing eggs; one is to place them in an ordinary shipping crate and fill all the spaces between the eggs and cardboard with sawdust. Another good method is to wind a small bunch of excelsior around each egg and pack so snugly in a basket or box that they cannot move about. Upon arrival, the eggs should be put in a room kept at an even moderate temperature and allowed to remain undisturbed for at least twenty-four hours, when the package may be opened and the eggs placed under the hens or in the incubator. Because of the rough handling to which eggs are subjected in shipping a rest of twenty-four hours is needed to enable them to assume a normal condition and to permit the germs to swing back in place before incubation begins. If the misplaced germs start to grow, a large percentage of them will die during the period of incubation.

Storing Eggs for Hatching.

In general, eggs cannot be set the day they are laid. Place them in a room where the temperature is fairly constant and at about 60 degrees F. Turn them carefully at least once a day. If the air is very dry, sprinkle the floor with water, or place a few pans of water in the room, otherwise there may be a rapid evaporation of moisture from the egg, leaving a big air cell in the large end of it. One can readily determine the amount of evaporation by marking the air cell while holding the egg in a ray of light passing into a darkened room and then examining it again in the same manner after a couple of days. There should be a very slow increase in the size of the air cell. Eggs intended for incubation should be kept no longer than is absolutely necessary. Two weeks is about as long as it is safe to keeep them, although with good care, under proper conditions, they may be kept longer. The fresher the egg, the more likely it is to hatch a good, strong chick. Many farmers practice setting the eggs from one day's laying, which is not objectionable, providing proper care has been exercised in sorting the flock to secure sufficient eggs of uniform size and color.

When the hens all run together and the finest shaped eggs from the whole flock are chosen, increased egg yields cannot result, as the chances are that some of the hens that have been laying well all the fall and winter are now ready to sit. Those that have not laid for months are the most likely to do so for a few weeks in the spring, and often produce fine large eggs, due, perhaps, to their long winter's rest. The use of eggs from such hens can only result in deterioration of the flock.

Purina Poultry Feed is a balanced ration containing only sweet grains and seeds. No grit, no drugs, no damaged grains. Ask your dealer for PURINA, or write
PURINA MILLS, ST. LOUIS, MO.
Portland, Ore. Tillsonburg, Ont.

A rather poor family unexpectedly came into possession of a fortune. They purchased a large farm with hens, cows and pigs. One day the little daughter of the family was showing a visitor about the place, says Everybody's.

"Do your hens lay many eggs?" he inquired interestedly.

"Oh, they can," was the haughty reply, "but in our new position they don't have to."

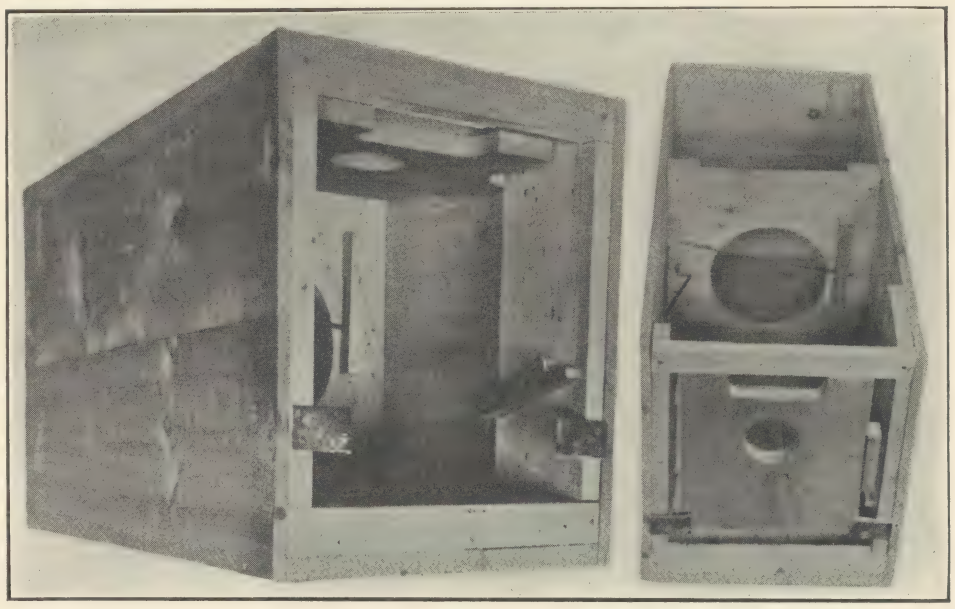
VOL. XXVI NEW YORK CITY, AUGUST 15, 1907 No. 685

THE MAINE STATION TRAP NEST

This trap nest is original with us; it is box-like structure without front end, or cover. It is 28 inches long, 13 inches wide and 16 inches deep, inside measurements. A division board with a circular opening 6 inches in diameter is placed across the box, 12 inches from the back end and 15 from the front end. The lower edge of the 6 inch opening in the division board comes down to within 4 inches of the floor of the box. The rear section of the box is the nest proper.



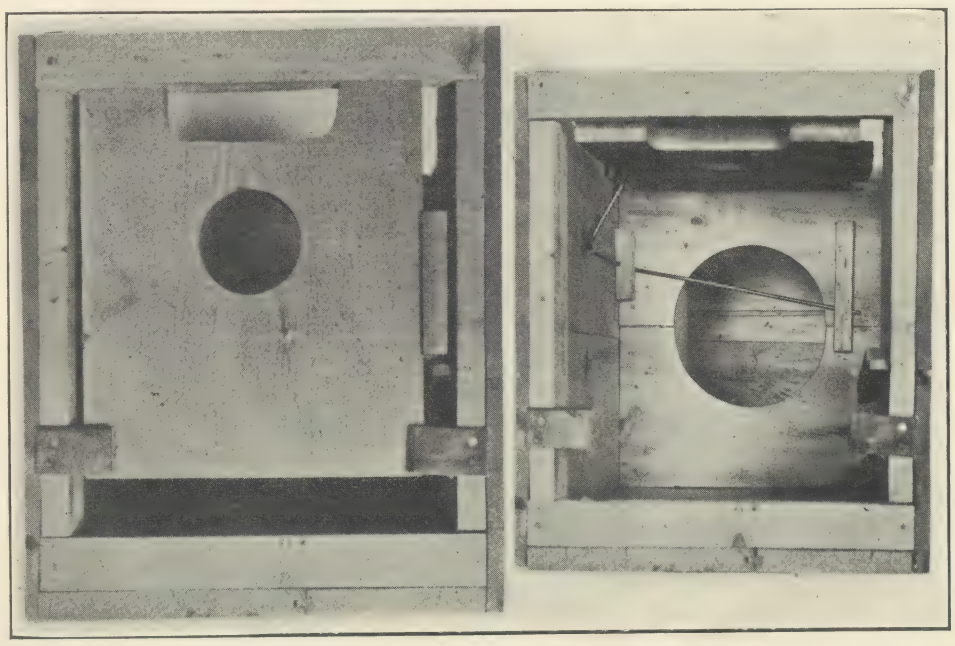
The double box with nest in its rear is necessary, as when a hen has laid and desires to leave the nest, she steps out into the front space and there remains, generally trying to escape, until she is released. With one section only she would be very likely to crush her egg by stepping upon it, and learn the pernicious habit of egg-eating.

The door is made of seven-eighths inch pine board. It does not fill the entire front, by 2 inches at the bottom and one inch at each side. A hole 2½ inches in diameter is bored in its center, to admit more light. For the same purpose a section is cut out of its upper end, leaving enough of the board at each side of the opening to extend up to the cross piece and hold the hinges, which are made of leather, tacked on the inside of the door and the top cross-piece.

The trip latch is made of a piece of stiff wire, about three-sixteenth of an inch in diameter and 23 inches long. This piece of wire is shaped so that a section of it, 12 inches long, rests horizontally across the circular opening in the division board, leaving about two-thirds of the 6 inch opening below it. It is held in place by 2 clamps, one on either side of the circular opening. The clamps have slots large enough to allow the wire to work up and down, about 3 inches, without friction. The next section of the wire is 8 inches long and is bent so that it is at right angles with the 12 inch section. It passes along the side of the box, back towards the entrance door. It is fastened strongly to the wall by staple and clamp, yet loosely enough so that the wire can roll easily, when in 12 inch section is pushed up by the passing hen. The remaining section of the wire, which is 3 inches long, is bent towards the center of the box with an upward inclination, so that it supports the door when opened up. The end of the wire is turned over smoothly, forming a notch into which the door slips, and rests when it is opened. The notch prevents this section of the wire from which the latch is made be of good stiff material, so it will not bend or spring much.

As the hen passes in under the open door, and then through the circular opening of the nest, she raises herself so that her keel may pass over the lower part of the division board, and her back presses against the horizontal wire, lifting it enough as she passes so that the notched end supporting the door, slides from under it, and the door swings down and passes a balanced catch which is screwed loosely to the side of the box. The catch locks the door and prevents the hen from escaping, and others from entering.

These nest boxes are placed in two rows, one above the other, and slide in and out like drawers and can be carried away for cleaning when necessary. Twenty nests in a pen accommodate 100 hens, by the attendant going through the pens once an hour, or a little oftener, during that part of the day when the hens are busiest. Earlier and later in the day his visits have not been so frequent. To remove



a hen, the nest is pulled part away out, and as it has no cover she is readily lifted up, and the number on her leg band noted on the record sheet, that is tacked up close at hand. After having been taken off a few times they do not object to being handled, the most of them remaining quiet, apparently expecting to be picked up.

Before commencing the use of trap nests, it was thought that some hens might be irritated by the trapping operation and object to the noise incident to it, but not an individual has appeared to be annoyed by it, and Leghorns, Brahmas, Wyandottes and Plymouth Rocks have been used.

The amount of time required in caring for trap nests depends upon how heavily the hens are laying. In one house there are 400 nests used by 2,000 birds. During the busy season when 1,200 to 1,500 eggs are laid per day, the work of liberating the hens and recording the laying, requires the full time of an active man, during the busiest 4 or 5 hours of the day. During the remaining hours he has some time for other work.

The nest is certain in its action, easy of operation and simple in its construction. It is not patented. We do not sell it. Any one is free to make it.

THE LAKENFELDERS.

Among the latest importations of chickens into this country are the Lakenfelders from West Hanover, Germany. These birds are small of body with large combs and wattles. They are quite narrow in front, with a rather long back. The plumage is white on the body, while the feathers of the hackle and tail are black

---

Summer is a good time to take a vacation, but before going do a little work around the poultry yard. If you neglect your poultry during the summer you are away behind the man who doesn't by the time the frost is on the pumpkin.

THE NEW ENGLAND LANGSHAN CLUB.

By Paul P. Ives.

I wish to say a few words on the Langshan fowl and the New England Langshan Club now forming.

As a "chicken crank" from earliest boyhood, and after having had more or less experience with nearly every breed of poultry in the Standard, I can most emphatically say that for an all-round satisfactory fowl, the Langshan is my choice.

As table poultry nothing can compare with a well grown Langshan cockerel for delicate flavor and pureness of grain.

As layers, no breed can beat them for the year and their "busy season" is in winter when eggs are scarce and prices high.

If you are looking for a problem in breeding try and produce a Langshan with a full-breasted deep body, wide "spready" tail, firm, straight, fine-boned legs, set well apart, and well-feathered down the outer sides, with smooth middle toe, a good five-point comb, dark eye and clear green color from head to tail and see what you are up against.

At the same time a flock of Langshans always looks uniform to the casual observer, even if not up to the exhibition type.

As a New England fowl what breed can touch them, laying a rich, brown egg, which is what we Yankees want while their heavy feathering and robust constitution make them particularly well-suited for the cold winters and sudden climatic changes of New England.

And yet for the past decade up to the last year or two here in the East, the Langshan has been on the downward grade. There has been an awakening within the last year of interest in the grand old breed, which makes us who have stood by it all through the dark days, take heart and feel that the Langshan may once more come into its own.

The New England Langshan Club now organizing, has for its object the furthering of the interests of the Langshan by offering of Specials at the Shows, publishing of egg-records, descriptions and photographs of noted birds and by discussing and talking the breed whenever and wherever possible.

Fellow-breeders and fanciers of the finest old breed of them all, let us get together and with a strong pull and a long pull and a pull altogether, put the Langshan where it rightfully belongs, first in the hearts of New England poultry men.

Mr. John Aldrich, Court Square Theatre Building, Springfield, Mass., who is acting as Sec. Pro. Tem., will be pleased to answer any questions regarding the club.

Let me again say we must all work together and put the Langshan right up in the front row.

When you write to an advertiser please say that you saw the advertisement in The American Fancier. This will help you and will also help us.

GRASS AND GRASS RUNS.

Grass is the most natural green food for poultry. When they can have it they eat a large quantity, and nothing else has such an effect in giving gloss to the plumage and hard feather, says the Feathered World. Even when range is not at command it is often possible to arrange with children for a supply; but when thus given artificially it should either be in the shape of turf thrown into the run, or, if the grass is cut, further cut up into small green chaff. Long grass will be eaten, but is apt to tangle up into a fibrous ball in the crop, and may thus produce serious mischief. Where fowls range on grass, no other fresh vegetable food is required.

Grass runs are, therefore, invaluable for fowls, and save more time and trouble than anything else. But too small a grass run is unwholesome, and worse than none, because it cannot be cleaned or kept clean like an earth or gravel run. It is therefore important to know the necessary limits. It is found that with fowls of average size, 100 birds require an acre to permanently range over; the small breeds will stand rather more on the ground, the largest a little less; with less than this the ground gradually gets foul. Thus we may say that for permanent runs, from 400 to 450 square feet per bird are required. But this is not the best way to use the ground, because while more cannot be put on it without slow pollution, the grass will not be nearly eaten or kept down, while yet it will be too much fouled to be grazed or mown.

This waste can be avoided in two opposite ways. It is found that ten or twelve birds per acre can be run upon land without sensible pollution or interfering with other stock. To that amount, therefore, poultry may be run upon a farm (so far as separate buildings or fencing allow of such distribution) without detriment to other operations. On the other hand, dividing the grass into plos, twice or thrise the normal number may be run upon one for a period, then the double or treble stock can be removed to another portion, and the used ground be left fallow for a time, depending upon the weather, and then either grazed or mown for hay.

The grass will not during the growing season be sufficiently kept down even by this system of (temporary) overstocking, and should be mown occasionally, as long grass is not only bad for the fowls to walk in, especially if feather-legged, but may prove injurious if eaten, in the manner already referred to. The cut grass should be used as manure.

Such a division into smaller runs, double or treble stocked, is also much better for operations in rearing and sorting out chickens, but its economical carrying out demands system. In

practice, runs about 50 ft. by 20 ft. or 50 ft. by 25 ft. are found to answer well, accommodating a breeding pen of six good-sized fowls, or a larger lot of growing chickens, or several lots of small ones, which it will easily do because the ground is fresh and sweet. Where circumstances favor, the simplest plan would be to have a number of runs side by side on one side of a range of houses, divided by a couple of very thing boards and a strip of netting. One 50-yard roll of netting will cut three such strips without waste. Such fencing, properly planned, can be removed with little trouble to the other and fresh side of the same range of houses, leaving the used runs as an open space to be grazed or mown when ready.

A small plot cannot be kept in grass for long if stocked above one fowl to 100 or 150 square feet; becoming in time stale, as above stated, even with that, unless relieved. The only way such a plot can be used in grass is to grow grass to cut for the fowls. In this way it may be of great use, especially by sowing rye and clover, and sprinkling a little manure occasionally.

HOW TO SET A HEN.

Have four or five hens hatch at the same time. Then select the best mothers and give them the chicks. Oftentimes you can dispense with one or two coops by so doing and thus make it easier to care for the chicks.

Powder the chickens and mother with some good insect powder and spray the coops with kerosene.

The hen should also be dusted and her nest fumigated when she is first given the eggs. This can be repeated at intervals during the sitting period, always at night, as the hen does not then mind being handled.

* * *

The water dishes or fountains should be thoroughly scalded with boiling water to kill the germs which lurks in impure dishes. If disease enters to flock it is liable to be spread through the drinking fountain where all the fowls drink together.

* * *

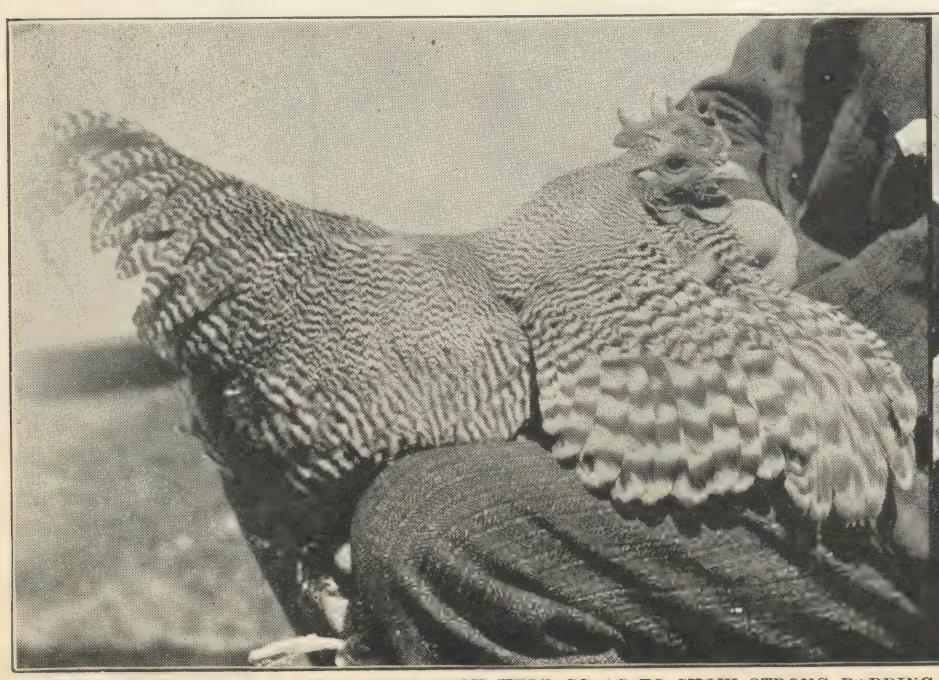
Pip is a term usually applied to inflammation of the mucous membrane of the mouth, the chief sysptoms being a drying of the membrane of the mouth, particularly the covering of the tongue. Edges and ends of tongue become horny and sometimes separate in the form of a hard shell. Usually accompanies some deranged condition of the digestive organs or some disease affecting the air passages. May result from inhaling irritating dust. Try moistening tongue and mouth with a mixture of equal parts glycerin and water two or three times a day. If this does not give relief use a solution of fifteen grains of boric acid in an ounce of water in the same manner.

* * *

Hens not valuable as breeders are generally best killed at either one and a half or two and a half years old. Chickens are best killed as soon after four months as they can be got ready. In breeding prize stock, however, it is often best to kill much earlier, and those not up to the mark should be killed freely, that there, may be room for others—hence these are often best killed quite small.

As to methods of killing, the French mostly thrust a sharp knife through the palate into the brain. In England the more usual way is to break or twist the neck. Some amateurs find the most certain way to do this is to seize the bird's head and give the bird a powerful swing in the air, which at once severs the vertebrae, but professional men hold the neck in the hand, and break it close to the head with the other hand, placing the thumb behind the head. In many cases it is best to put a lashing round the wings and legs to prevent flapping and struggling.

KEEPING TO MANY BREEDS.



By C. B. Taylor (Heysham).

One of the greatest mistakes to those who start poultry-keeping is to keep too many breeds, for it is really impossible to be very successful, either as a breeder or exhibitor of so many varieties; it is by far the best to pay all the attention to one variety than to keep many breeds and attain no perceptible distinction with any. A greater part of the poultry breeders whose yards I have visited have the desire of keeping as many breeds as they have possibly room for. How many varieties of birds, he fails entirely, and gives it up in disgust, and declares "poultry-keeping never can pay."

It does not matter what kind of a business man takes up, he must, to be successful, understand every detail of it, or otherwise he can never expect to succeed. In launching into poultry-keeping a man must have his wits about him, and his ears open, and above all must have patience and perseverance Whether he can do best at raising for market, or for egg-production, or for show specimens must be solved by himself, and the location of his farm. If a breeder has long studied each variety of several breeds, and has a real, thorough knowledge of them, and has the space and time to attend to them, it will be safe for him to keep a few varieties, for he will then know the characteristics of the breeds

It is not advisable for any man to handle more breeds than he can see his way to improve on at each time of hatching. For any person to advertise and supply stock that will not produce better each time it is bred is a great evil that ought to be guarded against and entirely stopped. What is the object of our breeding if we cannot produce improvement on our part each time we try? Still, how can we learn all at once. The mating, feeding, and care of any two breeds are not the same. In order to be successful every breeder must strive to produce birds better each time, and must, above all, understand the mating and feeding, and the variety he is handling. Too many breeds have the tendency to throw poor under-color, bad combs, bad shape and, above all, "egg-production," which is the worst of all, and renders the stock only fit for table purposes. Above all, aim to understand the varieties you keep, and keep only one variety until you have a perfect knowledge of it.

Let us suppose a man starts with a hundred birds containing five varieties, and twenty pens of each produce a very few really good chicks. Why? Because care was not taken of the old stock, and from the chickens hatched one-third are culls, and. for the want of proper care, feeding, etc., another third die, leaving the remaining third to choose breeders, from, and to balance the expense of the other two-thirds. Every breed in existence has already too many amateur breeders, but by continual working, thought, and patience, improvements can always be made, and therefore it is wiser to keep only two or three breeds at the utmost.—The Feathered World.

AN EXCEPTIONAL BARRED PLYMOUTH ROCK HELD SO AS TO SHOW STRONG BARRING.

PAIR OF BARRED PLYMOUTH ROCK FEMALES. (Courtesy of the Rural Magazine.)

A MODERN POULTRY HOUSE.

Built by J. W. Whitney, Long Beach, California

A thoroughly practical poultry building possessing all modern improvement including the justly popular fresh air principle, and all practical labor-saving devices that can be constructed at a moderate price and yet possessing ornate beauty in keeping with the home and its surroundings, has been a subject of much interest and consideration to the aspiring amateur and prospective poultry man. Thousands of dollars are annaually squandered in the construction of monstrosities termed poultry building in reality varatable death traps, the breeding places of lice, disease and deadly gases, as surely fatal to success in the production of healthy fowls as they are useless for the purpose intended.

In the construction of the fowl house, simplicity of arrangement. Correct ventilation. And labor-saving devices for the thorough comfort of the occupants, are the most important considerations.

The picture illustrates the boiled down essentials for perfect results at the least possible cost for construction, and yet retains an ornate appearance in keeping with the modern home.

No attempt will be made to give a working plan for its construction, and only a general estimate of its cost, as much depends upon the price of material at time of building and also location of same. The first thing to consider in building a poultry house is the site which should be on high, well drained ground. Never under any circumstances attempt to raise fowls of high quality on a poor, worn-out soil. A rich, sandy loam, the richer the more productive the better is preferable. Many a failure which has been attributed to other causes has been due to an improper selection of location and soil. There is a difference of opinion as to the proper frontage for the fowl house. The prevailing winds and the direction from which the most severe storms may be expected, should influence the frontage of the house described in this connection. An east front, if conditions are favorable, is a good one. By consulting the illustration a very good idea of the house may be formed. The elevation is 10 feet at front, 8 feet at rear. The house is 8 feet wide and 16 feet long, giving 2 rooms 8x8 or 64 square feet of available floor space on the upper or board floor. The ground floor has a corresponding amount of space, making in all, 256 square feet of floor space and protection under one roof of one-half that capacity, built, as many houses are. Hence, the capacity of the house is at least one and one-half times that of a one-story building. The nest boxes are situated at the rear of the building on the first or ground floor, and are accessable without entering the building or yards, and extends the whole length of the building, giving abundant nest room; can be easily removed or cleaned. This arrangement makes possible the use of the second or board floor only for roosting purposes , except in very severe and stormy weather which saves much labor in cleaning and a much more sanitary building. The roosting room, as seen by illustration, has fine ventilation, and is used night and day as in illustration except in extreme weather. If the building faces any direction except directly north, the sun reaches every corner of the building at some time in the day. No dampness or foul air can possibly accumulate in the house. The large openings in the front are covered on the outside with one-half inch wire screen and supplied on the inside with canvass curtains on frames which hinge to the top, swing inward and hook to the roof. The projecting roof on front serves as a sun and rain protection and keeps water from the lower floor which is of dirt. The height of the first story, from the ground to board floor, is 2 feet. The frames are 36 inches wide, the width of common unbleached muslin, but may be made wider if two pieces of cloth are used. They are 7 feet, 4 inches long, giving 4 inches for casing at each end; middle casing, 8 inches wide. The interior arrangement may be made as elaborate as the taste of the builder may think advisable. The arrangement of door steps, etc., may be seen at a glance.

This house will accomodate 80 head of mature fowls nicely, and at a first cost of not to exceed 50 cents per fowl. If cleansed regularly, roosts and inside, white-washed twice a year, no case of colds, roup or lice should be developed. In short, it is thoroughly practical, sanitary, convenient, as well as attractive looking building, built on correct principles for business, health and beauty.

Henry R. Ingalls, Greenville, N. Y., Secretary of the American Buff Wyandotte Club, writes us that the club is about to issue its annual catalogue and offers a fully paid up membership to October 1, 1908, for $1. Those who join now will get their name in the new catalogue. Members of the club should send in their advertising and articles as soon as possible. The club will offer four fine special ribbons at any show whose secretary will ask for them. The requests should be sent in early, so these specials can be listed in the premium catalogue of the shows.

THE FAVEROLLES.

By H. W. BARDWELL.

To combine the good qualities of several of the best and most profitable breeds of chickens required many years of patient and intelligently directed experiments. The thrifty French poultryman accomplished this. He produced a hardy chick that three months from the shell became a plump, well developed, four pound broiler. The pullets at an early age became prolific egg producers. At maturity they were a firm meated, fine grained, well feathered, unsurpassed table fowl. The originators were satisfied, they cared not for fame, color or general appearance, the above named qualities were their standard. With this one breed they could simply supply all the demands at all seasons of the year and be assured of a continuous profit.

As the fame of this general utility fowl spread, poultrymen wanted the chickens that were raised up in the Faverolles (the section of country where they originated) from this they became known as "Faverolles." The wide awake Englishman soon procured the best specimens to be found in France and bred them to a standard now known as "The English Standard."

The fame of the Faverolles as a general utility fowl soon reached this country, three American gentlemen, unknown to each other and widely separated by distance, residing in different states, desiring to procure for their own use a single breed of fowls that would supply all the requirements at all seasons of the year, imported, regardless of expense, the best specimens of Faverolles to be procured in England. Other parties have made importations since, but from these three importations came the many fine flocks of Faverolles now owned in America.

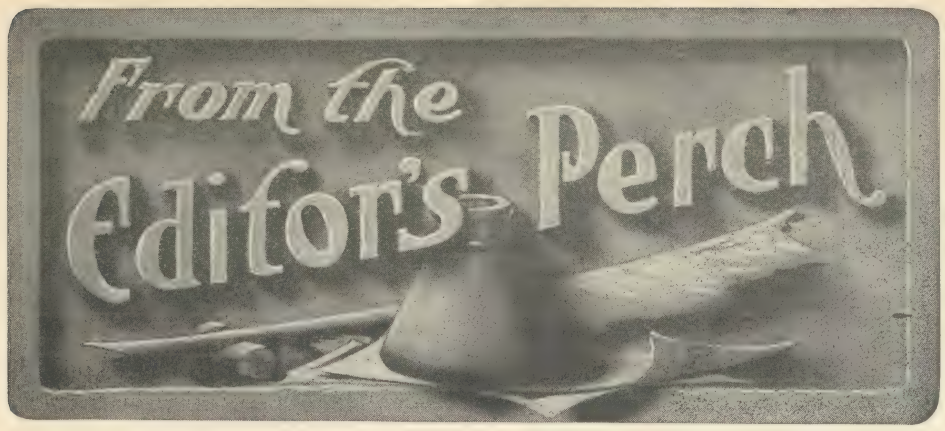
It is safe to say that America can to-day gurnish as fine specimens of the breed as can be found in France or in England.

By our united efforts let us keep them as good as they are, improve them if we can.

The raising of poultry and growing of fruit go well together.

HINTS ON WASHING WHITE LEGHORNS.

By N. V. Fogg.



The way I prepare my White Leghorns for the show-room is as follows: About three weeks before the show I select about one-third more birds than I will exhibit and give them a good thorough washing, using ivory soap and soft water about as warm as I can work in. Use a brush on head and legs and on any stained spot in plumage. Rinse very thoroughly in a separate tub of water that is slightly cooler, then rinse in a third tub of water that is just tepid and slightly blued. Do not wipe with a cloth or try to squeeze out the water with the hands. Simply drain a moment or two over the tub, then put in a cage with a burlap bag in the bottom to catch the water. Have the roof very warm, about 85 or 90 degrees is not too hot. Keep the unwashed birds in a cooler room. Place the wettest birds near the stove and gradually work them back as they dry. Reduce the heat in the room gradually as the birds dry off. About five birds can be washed and rinsed in one water, then all three tubs have to be refilled.

Second Washing: After the birds are all washed I go over the string and pick out the birds that did not improve by the washing. Some will probably have stained spots on the plumage that no amount of washing could remove. I discard these. I take special care of those remaining for another week and then give them another thorough washing. This second washing improves them fully as much as the first. After they are dry I make the final selection of the birds that will be exhibited. About four days before the day that they are to be judged I give them another thorough washing, after this third wash the birds are a sight to please the eye and are ready to meet the strongest competition.

It takes the greatest care now to place them in the judges' hands without being soiled in any way. When you are ready to ship have large roomy coops and ship each bird in a separate coop. Be sure that the inside of each shipping coop is thoroughly cleaned. With a damp cloth wipe out each exhibition coop before putting the birds in it. Be on hand early the day that the birds are to be judged and see that your birds are looking their best. A little cleaning up at this time may save a ribbon for you.

In the warm weather, when the hens are making their best records at laying eggs, many farmers preserve the eggs by the Lime Water method and keep them to sell in November to February at high prices. Others keep the eggs in salt, but this method has proved unsatisfactory because a part of the egg evaporates. The best was to preserve eggs is the Water-glass method which mixture can be obtained from most any poultry supply store. The U. S. Government report on the Water-glass method is very satisfactory.

The total amount of cash and cup specials of the Allentown Fair will be almost $2,500. Write to W. T. Wittman, Box A., Allentown, Penna., for premium list.

On the third, fourth and fifth days after issue of August 1st was mailed, we received many letters, telegrams, local and long distant telephone messages of congratulation for our first number of "The American Fancier." We are glad to know that our endeavor is being appreciated, and we assure all our readers that our present issues are only the first steps of advancement, for when the busy fall and winter season comes the number of our pages will be increased so we can publish more writings and illustrations. July and August are the two most quiet months in the poultry business. All poultry publications are greatly reduced in size.

* * *

Prof. G. M. Gowell of the Main Agricultural Experiment Station had photographs of their trap nests at the "Station" taken especially for us and from them we made the half-tone plates used in illustrating the Trap Nest article on page 3 of this issue.

* * *

Poultry culture has in the past five years made rapid strides, both the fancy and utility branches.

The consumption is far greater than the production. This is indeed a most favorable condition, but whether or not these conditions continue rests entirely with the fanciers and breeders themselves.

During the last year or so hundreds of enterprising Americans have read the startling advertisements relating to how to make money with poultry.

They have plunged headlong into the business without the least knowledge of the care, housing, marketing, etc., of the stock.

The poultry industry, as it must be called, requires thought, business ability, just as any successful enterprise of the present day.

Many, we are sorry to say, start with a most expensive plant.

Poultry does pay, and pay well, for those who use common sense, obtain the best of stock, practice economy in the feeding, housing and all details about the plant.

Poultry for pleasure and poultry for profit are two different propositions.

If one has limited means it is far better to start in a small but careful manner than to engage a poultryman and begin with such an expense. One must remember it is the labor question which is the stumbling block to success.

We often hear the question asked: If 300 hens pay a certain profit, why will not 3,000 pay proportionately?

The answer is, the cost of labor for the 300 was not figured, whereby the cost of labor for the 3,000 was quite a factor. The most successful poultry plant of to-day is one managed by its owner.

* * * *

During the past four years much attention has been drawn to the subject of suburban and back-yard poultry keeping. It is known that to keep and breed successfully in confinement the birds must be supplied with some substitutes for what they would be able to get for themselves if at liberty.

If properly attended, poultry in the backyard cannot only be made to be self-supporting, but can show indeed very good interest on the investment.

This issue going to press on the 10th of the month, we are unable to report the meeting of the A. P. A. at Niagara Falls, but our issue of September 1st will devote considerable space to it.

* * *

Many poultrymen are complaining about there being too much "politics" in the A. P. A. If there is, then its up to all the members not included in the "select political click," to attend the different meetings and by unanimity change things.

* * *

There are always some undesirable officers in every association, but generally they represent the minority and it is the majority which rules.

* * *

The A. P. A. has in the past and will continue in the future to make mistakes, this is only natural, but the harm from these mistakes has been small when compared with the great benefit that the poultrymen in general have derived from the good work of the association.

* * *

If some officers of the A. P. A. are working for their own interests, are there not others who are working solely for the welfare of the Association?

* * *

We have been notified that Chas. T. Cornman, whose adv., was in our August 1st issue, just sold all his game bantams to D. C. Witmyer, Lititz, Pa. Mr. Cornman is selling out his entire poultry plant which include fifty acres, house, barn, etc., etc. Also many breeds of fowls in addition to the game bantams which have been sold. His adv. appears on the back page of this issue.

* * *

Many of our readers write that what is wanted is breed standards. Not an elaborate one gotten up to sell at a high price, but an inexpensive one.

* * *

The Western Poultry World gives notice on their editorial page that it will publish only the winners of its advertisers. We reprint the following from their July issue:

"Poultry journals and other publications have a certain amount of space for sale, the sale of such space being their means of livelihood. In order that those who use a portion of this space may reap the full benefit of their expenditures, **THIS PAPER WILL HEREAFTER PUBLISH ONLY THE WINNINGS OF ITS ADVERTISERS."**—Western Poultry World.

* * *

We believe when a paper publishes the report of a show it should include the prize winners regardless as to whether the owners are patrons of their advertising columns or not. The policy of The American Fancier is to publish the winning birds without favor to any one.

* * *

Mr. R. Seaman, secretary of the L. I. Poultry & Pet Stock Association. called at the American Fancier office last week and reports that the entry list will be a large one. Nov. 19th to 22nd are the dates for the exhibition.

Mr. H. T. Deeley, in his lecture which was printed in the Feathered World, states that the success of the Wyandotte, which variety originated in America about 1884, is due to its being a generally useful fowl, a capital layer, very hardy, and easy to rear, a splendid sitter, though not excessively broody. "In the laying qualities the White Wyandotte has the distinction of having carried off in the laying competitions the highest individual score."

"Apart from the plumage, the characteristics of the Wyandotte are few, and easily described. The head should be broad and rather short, the Brahma ancestry being here clearly traceable; a rose comb, it should be neat and full of work; the spike or leader should curve downwards parallel with the top of the head; it is thus termed a cradle-comb, the face, ear lobes, and wattles are smooth and fine, and brilliant red. The neck hackle of the cock should be full and flowing; the back short, the saddle rising in a nice curve to the tail; the tail well filled and sweeping, and rather upright; the body is very full and broad in breast, and deep but not long, giving it a cobby appearance. This cobbiness on a medium or rather short shank is the characteristic of the Wyandotte." Of the ten varieties the Silver-faced claim to be the oldest and the Columbian the new breed, but the Partridge Wyandotte, Mr. Deeley believes, is the best of the ten.

* * *

Mr. J. A. Gill has had thirty years' experience in the poultry fancy, and has kept the Silver Pencilled Wyandotte almost from the time they were introduced into England. He has the following to say on the Silver Pencilled variety:

"During my somewhat thirty years' experience in the poultry Fancy, and having kept almost every recognised breed that has been produced, I can safely place the Silver Pencilled Wyandotte as one of the most useful all-round fowl yet in existence, especially for hardiness. I cannot find their equal to suit us, as most of our birds are placed in the open fields in portable houses, with practically no shelter whatever, often exposed to the Channel gales, which I can assure our inland fanciers are not of a very inviting character, especially during the winter months; yet our March-hatched pullets began to lay in September and October, and continued throughout the winter; also, many have as yet shown no sign of broodiness.

"For table qualities our second-raters and wasters are always sent to the Dorchester poultry auction, where oftentimes in the season from 1,500 to 2,000 birds are penned weekly, buyers attending from most of our south-coast pleasure resorts. Strange to say, despite the first-class table fowls, bred especially for these sales, our Silver Pencils generally top the market, and to prove the popularity existing there, we have sold quite fifty cockerels during the past season to farmers and poultrykeepers for crossing purposes.

"The complaint of small-size eggs only exists with pullet breeders, which at present are very in-bred, to improve the pencilling; thus it is only a question of a year or so to be equal to the other varieties of Wyandottes."

"My opinion is there is a big future for both Silver Pencil and Blacks if the clubs use their influence to get shows to support them with either novice or open classes, because their utility qualities will be gradually proved and make them most popular for both profit and the show-pen."

* * *

Necessity accomplishes more than choice.

EGG MISSILES FOR RATS.

John W. Butler, who has a butter and egg store at 216 Washington Street, recently discharged a boy, Louis Hyman of 290 Cherry Street. Hyman went to an employment agency on Sixth Avenue. He was directed to James Harris, manager of a private detective agency.

Harris is said to have asked the boy if he ever saw any stealing going on at Butler's place. The boy said the employes sometimes fried eggs and ate them and sometimes they would throw eggs at rats in the cellar. According to Mr. Butler Harris communicated with him telling him he could give him information which would save him a lot of money.

Butler, after consulting with Harris, gave him $50 and the information he received concerned the use his employes made of eggs.

Mr. Butler neither cared about the riddance of rats at the expense of a few eggs nor about his employes satisfying their hunger. He then appealed to the police to help him recover his money and detectives got a summons and brought Harris yesterday to the Jefferson Market Court. He was charged with obtaining money under false pretenses. The case was adjourned until Tuesday. Harris being paroled in the custody of his counsel He gave his address as 1341 Broadway.

"SPOTTED EGGS" FOR PIES.
Swift and Armour Men, Caught Selling Them, Say They're Often Used.

"Whew!" exclaimed Magistrate Wahle in the Harlem Court yesterday when he was presented with the evidence against Harry Shore of 108 East Second Street and Jacob Pearlmutter of 548 East 139th Street. "Whew, but that is awful. What do you do with eggs when they reach that stage of decrepitude?"

"Put 'em in pies, Your Honor," came the answer.

"Then I'll eat bread hereafter," said the Magistrate.

The men, who are employes of Swift & Co. and Armour & Co. were charged with disposing of "spotted eggs" to Health Inspector Masterson, who swore that he had purchased six dozen eggs from each, and on submitting them to the "candle test" had found that they were spotted and unfit for use.

When he spoke to the men about the matter he was told that the eggs were "good for pies," and largely used by bakers for such purposes.

Joseph Oppenheimer, manager for the Armour branch, where Pearlmutter is employed, bailed him out. Shore was remanded to the West 125th Street Police Station for examination this morning with Pearlmutter.

* * *

From Oswego, N. Y., comes the news that Murphy Cook, an Italian shooed out of his garden a lot of chickens belonging to James Reitz, whereupon it is alleged, Reitz opened fire on Cook with a shotgun loaded with buckshot, inflicting wounds from which Cook's death resulted.

* * *

It is said that a great deal of indignation has been aroused at Greenwich, Conn., by the discovery that the scallop beds which have made Greenwich Cove famous for years are being destroyed by a mammoth flock of imported ducks owned, it is claimed, by J. Kennedy Tod, a New York banker, who has an estate on the shores of the Cove.

* * *

The London Globe says that terror in the hen roost has been caused by the dictum of the Reading Poultry Conference, that "the secret of many eggs per bird is to keep no hen beyond the autumn of its second year." Has our Chicago Oslerism spread across the "pond" to cause consternation in the coops of the English breeders?

WYANDOTTE SHAPE.

By W. E. Samson.

Having been a breeder of Silver Wyandotees since 1886 and an exhibitor since 1889, and experienced the boom and the falling off of the Silver Wyandottes, so to speak, and the introduction of the English blood in our American birds to get the coveted open laced that many of our breeders seem to lose sight of, the main thing in our favorite shape. It was said years ago that "the Wyandotte traveled on its shape," and the Wyandotte is a bird of curves, and the same rules hold true today or should. Shape is the first thing to consider by the judge as he looks at the bird he is about to pass judgment on, and especially in the Wyandotte.

Get shape first, and then all the lacing you can. Get the females laced down over the thighs and on the hocks like our best males.

We are sorry to see some of our judges apparently ignore shape and give first prizes to birds that have no more Wyandotte shape than a turkey has. If you breed turkeys, breed turkeys, if Wyandottes, then breed Wyandottes.

We are glad to say that most breeders are considering shape. It makes the breed, and with this end in view let us work to accomplish it and not lose sight of the main thing—shape.

W. E. SAMSON.

THE BEST TIME TO PAINT.

There are two objects in the use of paint, decoration and preservation—both of which are entirely defeated by painting out of doors in the summer months, because the summer sun extracts the oil (that preserves the wood from decay) from the paint before it has time to penetrate below the surface. Woodwork painted in October looks better at the end of four years than it would if painted in June.

The latest edition of the American Standard of Perfection contains all the changes and additions. Do not show birds unless you are posted on the laws and rules that govern the judging of fowls. On receipt of $1.50 we will send you one handsomely bound in cloth and beautifully illustrated.

* * *

We can save you about half the regular subscription price on any poultry paper. Let us know which paper or papers you want to subscribe for and we will quote you a low price.

* * *

When you write to an advertiser please say that you saw the advertisement in The American Fancier. This will help you and will also help us.

The twelft annual exhibition, State of Washington, will be held at Tacoma on Sept. 23rd to 28th. H. H. Collier, Supt.

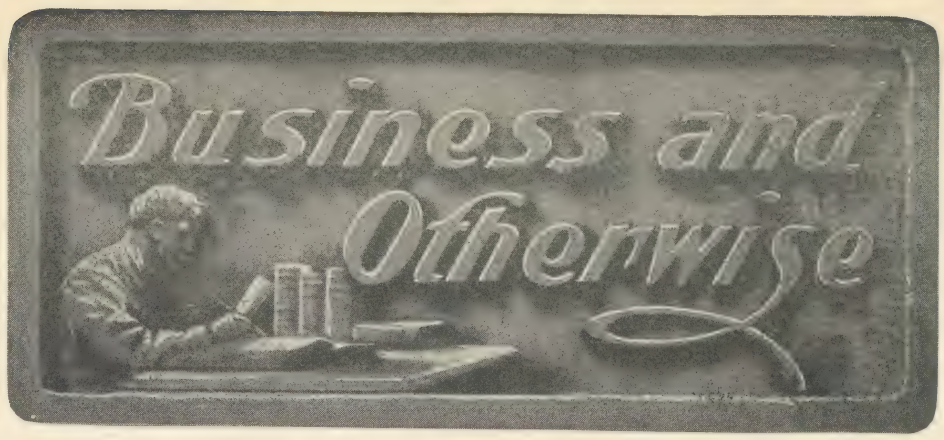
* * * *

The Hartford, Conn., show will be held from Jany. 28th to 31st. F. O. Groesbeck, Secty.

* * * *

Sept. 2nd to 5th are the dates of the Cambridge, N. Y. Fair.

* * * *



The Herndon Poultry Association hold their annual show at Herndon, Va., Jan. 2, 3, and 4.

* * * *

W. B. Alexander, Secty. of the Charlotte Poultry Association, writes us that their show will be held Jan. 17th to 23rd, at Charlotte, N. C.

* * * *

Ohio Branch of The American Poultry Assn., will hold a show at Columbus the week beginning Jan. 20th. Chas E. Cram, Secty., Carey, Ohio.

THE AMERICAN FANCIER

Established 1893.

A Magazine devoted to Standard-Bred Poultry, Pigeons, and Pet Stock.

LEONARD W. LOTT *Editors* *HARRY M. POCKMAN*

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations

Expirations—Paper is discontinued at completion of subscription term. If a subscriber wishes a subscription continued he must notify this office and send the amount in payment for same. If this notice is marked with a large blue "X" it means that the subscription has expired. Renewal should be made at once to avoid missing a number.

Change of Address—When writing to change address, the old one must be given as well as the new.

Advertising Rates.

DISPLAY 10c per Agate line, 7 words a line; 14 lines to the inch.

	1 time	1 mo. (2 times)	4 mo. (8 times)	8 mo. (16 times)	12 mo. (24 times)
1 inch	$1 40	$2.80	$10.08	$17.92	$22 40

4 inches	$4.00	$8 00	$28.80	$51 20	$64.00

Classified—50 words or less, 1 time, 50 cents. 12 consecutive times (6 mo.) $5.00. 24 consecutive times (1 year) $8.00. Additional words 1 cent each per issue. Numbers and initials count as words. **Terms cash with order.**

Forms close the 10th and 25th.

The American News Co. will have charge of retailing the paper over the news stands throughout the United States.

Published by

Leonard W. Lott & Co.,

108 Fulton Street, New York.

Advertising forms for Sept. 1st issue close on August 20th.

* * *

Above we fully explain our rates and terms for classified advertisements. Numbers and initials count as words.

* * *

The American Fancier reaches directly the superior buying class, a selection from the masses of people who are able to gratify their wishes and who are the greatest consumers.

* * *

Try a classified advertisement. It costs little and pays big.

* * *

Every breeder and exhibitor needs a new edition of the American Standard of Perfection. Price $1.50. Can be obtained from the American Fancier office.

* * *

Many subscriptions to our paper are from the owners of the rich country estates who breed merely for pleasure and buy the best. An adv. in the American Fancier will reach them.

* * *

A sensible business man uses good stationery. Circulars and catalogues that are poorly gotten up tend to give an impression of carelessness. Good printing costs very little more but will bring much greater results. Good printing is not a mechanical knack—it is produced by brains. The man who turns out poor printing is what other printers call a "blacksmith." No matter how high the price, a printer who hasn't got it in him can not produce artistic printing. Originality and artistic construction is what makes advertising literature attractive. Now-a-days poor printing gets no where except the waste-basket. A well-worded circular or booklet is a first-class salesman—but it must be well printed. Impressions are important, for many who get your printed matter never see you and know you only by the wording and appearance of the literature you send them.

Interior View of Lathrop's Shop, Rochester, N. Y.

TRAVELING INCUBATOR.

Wm. E. Langshaw, who moved from Rosemont, Pa., to Vineland, N. J., a distance of nearly 50 miles, relates an odd experience with a hatch.

He had an incubator starting to hatch the day he moved, putting him in somewhat of a predicament, as some of the eggs were imported from Scotland (of the Silver Gray Dorking breed). He didn't want to lose them, so he secured a basket, lined it with paper, then with a woolen blanket, placed the eggs in the basket, and then covered them with another warmed blanket, and covered the whole again with paper. Then he started for Vineland, having already sent word ahead of him for his man to have another incubator ready to put them in when he arrived.

In going from the Pennsylvania station to the Camden Ferry the trolley cars were blocked, causing him to miss his train, and forcing him to lay over for four and a half hours for the next train.

Yet, during all this period those eggs were hatching like hot cakes, for when he arrived at Vineland and opened the basket to put the eggs in the incubator he had 25 lively little chicks, that chirped like good fellows. These chicks are now 4 weeks old and doing well.

* * *

In order that people may be happy in their work, three things are needed: they must be fit for it, they must not do too much of it, and they must have a sense of success in it.—Ruskin.

* * *

There is a move at hand to form a Langshan Club in New England, Mr. John Aldrich, Springfield, Mass., is acting as secretary and treasurer temporarily, so therefore I call the attention of all lovers of the good old heed to give Mr. Aldrich our full support to form the club. There is a good Langshan Club in the West, why not form an Eastern Langshon Club. If the New England breeders get sufficient support from breeders in New Jersey, Pennsylvania, Maryland and other States the club is to be called the Eastern Langshan Club. Let every breeder get together and put the breed right on the top where it belongs. The pure Langshan at first imported from China is, I can safely say, one of the best all-round utility breed we have, it has come to stay and no effort will be spared to continue its career of success and aid it in taking its rightful place. I have joined the club, and will give Mr. Aldrich my best support.

HENRY CUNDELL.

Englewood, N. J.

* * *

The following is claimed to be the truth:

"Next to Japan, China offers the greatest array of marvelous dishes. Eggs forty to fifty years old, which have been buried for those periods in a clay, are held to be the greatest delicacies in the empire. The longer the egg is interred the finer it is supposed to be. The Chinese egg that is sent to the table is almost black, and its flavor reminds one of an overripe egge that has been hard boiled and then served."

* * *

Consul-General Rodgers, of Shanghai, writes:

While the Chinese are perhaps the most successful poultry raisers in the world, according to natural methods, they are also undoubtedly the most economical in the business. The foreigner, seeing the immense number of ducks, chickens and geese of the countryside, naturally assumes that large amounts of these or other poultry food must be consumed. Yet investigation reveals the fact that the Chinese consider the fowl perfectly able to pick up a living without much assistance on their part, and as a consequence herding is practiced, each flock being kept on the move as sheep on a range. It is true that at some periods of the year the fowls are fed, but the food given them would be considered chaff in other countries, and is practically worthless. The natural result is very poor poultry, but that is the rule and standard in nearly all China. It is an absolute fact, moreover, that the gleaning of the paddy fields by a flock of ducks, which often contain several hundred, is a distinct benefit to the Chinese farmer.

THE BUCKEYE RED OR BUCKEYES

WERE originated by Mrs. Frank Metcalf, who enjoys the distinction of being the only American woman who has perfected a new combination of blood in the domestic fowl which possessed sufficient merit to receive recognition from the American Poultry Association, being admitted to the Standard of Perfection at the regular meeting in Minneapolis, Feb. 13, 1905, which makes the Buckeyes a Standard Bred American breed.

Buckeye history began in 1889, when the originator, being dissatisfied with lazy Cochins, flying Leghorns and over-fat Plymouth Rocks, sought a new combination by crossing Buff Cochins with Plymouth Rocks, which produced a large, lazy bird of a peculiar mottled red color. At this time "Reds" of any variety were unknown, except in a small portion of New England, and the possibility of a darker red color together with the necessity of making the Cochin-Rock Cross an active, hard-working bird induced the introduction of Game blood.

Mrs. Metcalf here tells her own story: "I procured a setting of what were supposed to be Black Breasted Red Games' eggs from which to raise males for crossing with the Cochin-Rock hens. The Games grew fast; some had yellow legs and pea-combs. I now know that these were Indian Games, but did not at that time. I chose the two best cockerels for mating and this cross produced the first pair of Real Red chickens I ever saw. They were beautiful. I dreamed of a flock like them and they were the best layers we ever had, not excepting the famous Leghorn."

The work of perfecting this splendid type of Red Fowl continued, representing years of such labor as only the true breeder of live stock can appreciate with its trials and set-backs, but withal constant advancement, eliminating leg feathers, producing proper color, perfecting comb shape, etc.

In December, 1902, Buckeyes entered the field under the name of Buckeye Reds, being entered in the Poultry Show at Cleveland, O., held under the auspices of the American Poultry Association, at which time another variety of Red was shown, lighter in color, slightly smaller, with both rose and single combs, coming from New England, and called Rhode Island Reds. These fowls possessed great merit and were admitted to the Standard of Perfection and many of the breeders of the R. I. Red advised making the Buckeye Red over into a pea comb Rhode Island. This point was so strongly argued that experts on the subject were called upon. Hence, in June, 1902, Mr. Chas. McClave, President of the American Poultry Association, and Mr. T. E. Orr, the secretary, both well known poultry judges, visited the Red Feather Farm (Mrs. Metcalf's home) and after noting the superior shape of the Buckeye Reds and fine color, preserved by the now famous slate bar, together with the pea comb, strongly advised keeping on with them as an independent breed, bred to the Buckeye Red standard, and the wisdom of their advice is now apparent, as by their action in this matter they gave to Poultrydom America's Premier Red

After being exhibited at the American Poultry Association Show in Cleveland, the breed was in line for advancement, being shown at Rochester in 1904 and again at Minneapolis in 1905, fulfilling all requirements for recognition at the hands of the Association, who made the breed standard at this time, registering them under the name of Buckeyes instead of Buckeye Reds, a fitting climax rewarding sixteen years of energetic, painstaking work.

The Change of Name was caused by a fight in the ranks of the Rhode Island Red breeders between the single combs and the rose combs, the latter wishing to form a new breed from the rose comb Rhode Island under the name of American Red. This name, as well as Buckeye Red, was considered an infringement on their rights by the Rhode Island Red breeders, who developed sufficient strength at the meeting of the American Poultry Association to cause the word 'Red" to be dropped and Buckeyes substituted, while the fate of the American Red is a matter of history. But after all, to the breeders and lovers of the Buckeyes they are still known as the Buckeye Reds and will go down to posterity as such.

The eggs are a soft brown color and of good size. The market demands are met fully by a heavy carcass, containing more than the usual amount of fine grained breast meat, encased in an attractive yellow skin.

It has been repeatedly proven that a pen of Buckeyes will eat one-fifth less than a pen of any other large breed before the public today, even if the food stands before them all the time.

Utility has been the watchword of the originator all along and excellent laying qualities combined with strength and vigor has been given precedence over fine feathers.

Relative to the fancy, however, we wish to say that the Buckeye is the handsomest show bird on earth.

The males have the proud and erect carriage of the Indian Game without his harsh outlines. He has a rich glossy dark red coat, a broad high breast, a fearless eye, clean, strong yellow legs, broad shoulders, long back, red eyes and earlobes and the incomparable pea-comb to crown his majesty, making him the admired of all beholders.

The female when bred to showroom perfection, is a dark-brown red instead of a reddish buff, and is in every way as handsome as her mate.

A most valuable point that must not be overlooked in this connection is the remarkable ability of the Buckeye to reproduce true type and color. Fanciers will appreciate this, as the expensive double mating system is unnecessary, the Buckeyes having the faculty of producing both sexes from the same mating true to the standard.

The weights of the Buckeyes are as follows:

Cock, 9 lbs.; cockerel, 8 lbs.; hen, 6 lbs.; pullet, 5 lbs.

Detailed description of the breed may be found on page 79 in "The American Standard of Perfection," published by the American Poultry Assn., being sold by any of the poultry papers.

In conclusion let us say that, by breeding Buckeyes to the Rhode Island Red Standard, a Buff Buckeye has resulted which we may continue in the near future. These birds will be a bright golden buff with red wings like velvet and not the dull faded buff usually seen.

In certain strains, too, a Black Breasted Buckeye has been produced and this bird is too handsome to be lost sight of; these two new types will be carefully experimented with and if they prove as good as they look, they will be added to our list, thus giving three distinct varieties of the best breed on earth—the Buckeyes.

BUCKEYE BOOKLET.

* * *

This is a good time of the year to build your new poultry house or remodel the old one. The birds are out of doors and will not be interferred with, and the house can have plenty of time to dry out before the fowls are put there for the winter.

A PLEA FOR THE ROOSTER.

By R. V. Avery.

We've sung the praises of the hen,
From sea to see and back again;
We've prattled of her knowing ways,
And lauded her in evry phras.
In every clime she's given attention,
But of the cock we seldom mention,
Unless he, in a fight, is winner,
Gets a prize or is served for dinner.
'Tis true he lays no omelette,
But still we should not forget,
That he, it is, that chastises
Mrs. Hen, if he surmises
She is not her duty, doing
To the egg pile accruing
In the nest, there to be found
When the housewife comes around.
When the day is just a dawning,
From your sleep he starts you, yawning,
With his cheery How do-o you do-o?
Tell me true-o how do you do-o?
Our very best we'll do-o for you-o
Our very best we'll do-o for you-o
All praise to Mister Rooster,
For I think there'd be the deuce ter
Pay, if he should decide to leave us,
We would be in an awful muss,
For Mrs. Hen would grieve, you bet.
Then no more eggs for omelette.
No more frosting on our cake;
The cook would not know how to bake.
So you see the rooster, then,
Is as important as the hen.
I know he would not be delighted,
If he knew how he is slighted.
So here's to the proud and noble cock,
The supreme ruler of the flock.

* * *

The W. C. T. U. at South Manchester, Conn., is after a man of that town with a sharp stick for getting his hens drunk. The man has had trouble in making sitting hens stay on their nests and last week he hit upon the plan of soaking their corn in whiskey before he fed it to them. The hens become reconciled to sitting on their nests after they have eaten the corn, he says, and it is two or three days before they recover from the effects of the whiskey. By this time they have grown so accustomed to their nests that they refuse to leave them until their chickens are hatched. All their chickens turned out to be sober and industrious, according to the man.

SILENCE MEANT ECONOMY.

Two Irishmen, traveling, stopped for dinner one day at a hotel. During the meal Mike, on breaking his egg open and finding a chicken, exclaimed:

"And, begora, Pat, would you believe it, there's a young chicken in it."

"Keep quiet," says Pat, "keep quiet, or, bejabbers, you'll have to pay for it."—Exchange.

SPECIALTY CLUBS OF THE UNITED STATES.

We wish to call your attention to our prospective poultry exhibit to be held in connection with the Alaska-Yukon Pacific Exposition in 1909, and to earnestly solicit your presence in this city at that time. We want this exhibit to be the largest and best ever held in the United States, or even in the world, and we feel sure that with the good will and hearty co-operation of all loyal poultrymen we can accomplish all we hope for, and make the exhibit a grand success. We expect the poultry exhibit to be one of the most interesting departments of the Exposition, and for this reason we think there is some inducement for the specialty clubs of the United States to hold their annual meeting in this city in 1909. We are confident that such a meeting would be mutually beneficial to all concerned. Please bring up this question at your next annual meeting, and see if it will be possible for the clubs to meet here in 1909.

Trusting that this will meet with your approval and hoping to hear from the secretaries and members of the different clubs, asking for information or offering any suggestion, I remain,

Very truly yours,
J. L. ANDERSON,
Supt., 1902 N. 40th St., Seattle, U. S. A.

OVERHEARD IN THE COUNTRY.

Wilfred: Mamma, we were up in Farmer Crosby's yard, watching the eggs in his incubator.

His Mother: Did anything come out?

Wilfred: Yep; Farmer Crosby—and he chased us.

Some pigeons (young birds) get leg weakness, and this should be caught early and attended to without delay. This trouble as a rule begins when they are from four to five weeks old, but it often occurs when they are much older than this. If caught in time it can be cured with a very little attention on the owner's part. Again, unless the bird be a very valuable one, and is very bad, the game is hardly worth the candle. Still, I have found the following cure of beneficent effect on this disease: Take one-half of oatmeal and one-half of bonemeal, with a very little finely ground sharp gravel. Moisten the lot with cod liver oil; make this into small pills the size of a pea. Give, say, three or four each day, and a good safety pill night and morning Your birds may come round and be strong on the legs yet. This trouble is often brought on by improper feeding by the parents or feeders. See that your bird that is very bad is properly fed with its ordinary food. This can be done by hand feeding. The peas should be steeped in water for at least 12 hours; this helps digestion. Provide a dry shelter for those that have leg weakness, as dampness is very bad for this most annoying disease.

The best way to separate breeding pairs at the end of the breeding season is a bit of a puzzle. If you have feeders for your young you will have little trouble in separating the sexes at the end of the breeding season, which should not be later than the end of August. Again, a good deal of trouble comes in where one is keeping a variety that does not require feeders. The following arrangement I have found to work out fairly well. We will suppose that the hen has laid. Let her sit for a week or ten days, take away the eggs; and if you have feeders all the better, place the eggs under them. If not better to lose this nest by destroying the eggs, place all the hens together in a separate loft, one by one as the above arrangement suits, leaving the cock bird to do any feeding required to the former nest. Separate all young birds, and put them in a loft by themselves, and as soon as you can discover the sexes in your young, separate them also, keeping all cocks and hens separate till the breeding season comes round again, which begins about the end of February.

Loss of wing power in your pigeons may be brought about in various ways. It may be caused by the bird being down in condition, by an accident, by insects, by a cold, by insanitary conditions in the loft, or by unsuitable food such as peas which have been allowed to get dirty or mouldy through being kept in a damp place. Another very important point in preserving strong wing power is to supply grit. Many overlook this, which is a great mistake. Always have within reach a brick block of table salt; the bath is also necessary in preserving strong wing power; cod liver oil is also good given in the form of capsules, one or two at night. Weakness, as a rule produces loss of wing power.—Fanciers Review.

Ten homing pigeons have been guilty of a kind of lese majeste against the Kaiser by failing to deliver messages to Wilhelm II. with which they were entrusted.

They were despatched from the Friedsnau show ground, Berlin, where the Crown Prince opened the Army, Navy and Colonial Exposition, to Wiesbaden, where the Kaiser was staying.

Two thousand pigeons altogether were flown to carry the announcement of the exposition's opening to all parts of the Empire, and the simultaneous release of all these winged messengers was a most beautiful spectacle.

But, sad to relate, not one of the birds carrying the message to the Kaiser, reached Wiesbaden, or had been heard of a week after their despatch. Meanwhile the Kaiser had left Weisbaden for Kadinen, 400 miles away. Whether the missing birds have taken to a wild life or have been shot by the Socialists is the question that is puzzling the loyal promoters of the Exposition.

Perhaps the birds themselves were struck with the incongruity of doves bearing tidings to the War Lord, and decided not to deliver their messages.

A cure for diarrhoea in pigeons is to procure finely ground ginger. Make this into the form of pills, about the size of a pea; give one night and morning for a day or two. This is about the best thing for correcting bowel complaint in either old or young pigeons.

THE HELMET PIGEON.

This very pretty variety is fast coming to the front and well worth breeding; the first mentioning of Helmet Pigeon we know of is by Mon as early as 1735, Tegemeyer describes it at some length, Gilbert, Fulton and all books of importance mention it. All the writers agree that the original Helmet was of German origin and plain headed—some place it as a toy pigeon, others place it in the Timbler Class—generally the only properties for which credit is given are its markings and colors.

The later German books now in print positively state that the Helmet of to-day is a timbler originating in Hamburg, confirmed by Mr. C. Kruger, in the American Fancier of December. If the bird is observed closely timbler characteristics do appear in the better class of the variety particularly in plain headed birds. The bill is shorter and of different built than described 200 years ago. The bird has been bred by insistent breeders so long that distinct strains now exist and really no longer is a toy pigeon but high class and should be so considered.

There are a considerable number of breeders of this variety in the East and several out West sufficient to support a specialty club. We recommend these to come forward and get things in shape before the Fall Shows principally to obtain competent judges and proper classification.

Yours respectfully, A. E. ROBST.

PIGMY CLUB SPECIALS.

At the last meeting of the club a very novel method of soliciting and placing special prizes was devised.

It was suggested that each color class have a guardian for the purpose of collecting and equitably placing on the old and young cock and hen classes of the color all the specials given on that color. The idea was so enthusiastically received that the members volunteered to look after the colors as follows: Mr. A. E. Smith, blues; Dr. L. H. Jones, silvers; Mrs. C. R. Diffenderffer, reds; Mr. Wm. Kingsley, yellows; Mr. Joseph F. Bardooff, whites, and Mr. A. D. Brown, any other color. This leaves blacks and creams without a champion, and I shall be glad to hear from members who wish to join this committee and gather all the specials they can, not only for blacks and creams but for every color, take any special offered and notify the member in charge of the color on which the special is to be placed. This applies to every member. Each one should consider it his duty to see that he add to the list to the best of his ability and not sit idly by and wait for other members to produce the prizes that he has as much chance of winning as the one who is up and doing, having always the good of the club in mind and not missing an opportunity to land a prize for the club meet.

The more specials we can offer the larger the entry at the show, and the more interest is aroused, both of members and non-members. The more interest awakened, the more new members enrolled. The more members we have, the better the competition and that is the life of the fancy and the elevation and development of the pigmy, which after all is said is our aim. So, in a few words, specials get members and members make competition which in turn makes good birds.

However, the securing of specials will not alone assure the best results, but the prizes, fairly, sensibly and wisely placed will do the trick.

I am confident this committee of guardians will put them where they belong I know they have had experience enough with, and noted the detrimental effect of misplaced specials and prizes with strings.

Cut the strings, even if you have to cut the special also. Put them where they don't belie their name. Place them where it will take birds of special qualifications to win them. On birds that excel or that are "specially" gifted in some characteristic feature, and not where the owner and not the bird is the winner, and at that before or regardless of the judging.

In order of importance I should suggest the following: Best bird in show. Best old bird. Best young bird. Best old cock. Best old hen. Best young cock and best young hen. Best bird in each color, old or young, and if possible, old and young and cock and hen which is practically the same as the regular prizes, novice prizes, and then displays followed by the freak prizes, which in order to be distinguished from special prizes should be termed "additional" or "placed" prizes.

Novice prizes should not be overlooked as the number of novice entries penned last year was the largest ever and the direct result of the fine lot of novice specials offered the year before. Let us do even better this year.

Quite a number of new men have joined us this year, and when all the old stagers have paid up—about fifteen are late—we will easily muster forty members. That looks good to me.

E. C. DUFFY,
Sec. A. P. P. A.

THE PIGEON LOFT IN AUGUST.

The breeding season should be brought to a close, if this has not already been done, by separating the pairs. The birds will have been mated for five or six months, and the hens will be getting weak with the strain of laying several pairs of eggs, and of feeding young ones. They require a good rest in order to enable them to recuperate and to prevent unfertile eggs next spring. The majority of the pigeons, moreover, will have commenced to moult, and will have quite enough to do to grow a new suit of feathers, without the additional tax on their strength of bringing up a family. Late hatched young ones, too, are seldom of any value. Before they have attained their adult plumage the cold weather will have arrived and they will linger in a state of raggedness throughout the winter, the commencement of the ensuing breeding season finding them weakly and feeble. These late-hatched birds seldom moult at the proper time, and are, as far as possible, to be avoided.

It is not advisable to allow the young pigeons that were hatched early in the season to mate amongst themselves, which, if not prevented, they will do at about four months old. Directly the sex of the young birds is ascertained they should be put into the division of the loft allotted to the cocks, or hens, as the case may be. It is always easy to tell whether a young pigeon is a cock or a hen. It is no uncommon thing for pigeon breeders of experience to have two or three young birds each year which puzzle them for weeks before they are able to tell the sex.

The loft will probably be more crowded now than at any time of the year. Very few of the young birds will have been disposed of yet, except the palpable wasters, and they will have to be found room for as well as the older ones. Ventilation and cleanliness must, therefore, be insisted upon. Loose feathers will get into all the corners, and if not frequently removed will harbor insect vermin Illness, too is liable to attack the pigeons when too closely packed, especially if much rain follows hot weather.

Any of the stock birds from which good young ones have been obtained should not be parted with, but kept for another season. And sometimes those that have not resulted well, if bred from high-class pigeons, should be given another chance by being mated in a different manner next year. As it is always more difficult to obtain good hens than good cocks, this must be borne in mind when disposing of the surplus stock later on.

The novice should endeavor to visit one or two pigeon shows, with the object of forming an idea as to how his birds compare with the winners. It is not to be expected that many choice specimens will have been produced at the first attempt, so he must not be disappointed if he does not see any prospective prize-takers in his loft. When a bird is moulting it will generally be going through the process satisfactorily if the new quills are showing freely about the head and neck. But if the pigeon mopes, and gets very thin, it should be caught and looked at daily. There are excellent pills sold that help the birds if they go light, and these can be obtained for a few pence a box from most corn dealers.—*Fancier's Review.*

He who knows not, and knows not that he knows not, is a fool; avoid him.—He who knows not, and knows that he knows, is simple; teach him.—He who knows, and knows not that he knows, is asleep; wake him.—But he who knows, and knows that he knows, is a wise man; follow him.—Arabian Proverb.

CONSTRUCTION AND VENTILATION OF POULTRY HOUSES.

U. S. Department of Agriculture Compiled from Maine Sta. Bul. 100.

As an incident to poultry investigations of various kinds which have been conducted by a number of experiment stations considerable attention has been given to the construction of poultry houses and the amount of space per fowl which will give best results as regards health and productive capacity. For example, in a series of experiments made at the Maine Station, which have been noted in a previous bulletin of this series, it was shown that the best results were obtained by providing from 8 to 10 feet of floor space for each hen.

There is great difference of opinion as to the best method of calculating the number of fowls a poultry house will accommodate. The common method of calculation is based upon floor space, the height being considered immaterial. Houses built on this principle are low, and consequently the least expensive that can be constructed. Another method of calculation is based upon the amount of perch room, while a third is based upon the volume or cubic contents. Various poutrymen recommend 6, 8 and 10 cubic feet of space per fowl.

In view of the widely divergent views on this subject and the lack of definite knowledge K. J. J. Mackenzie and C. S. Orwin, of the Southeastern Agricultural College of England, undertook a series of experiments to more definitely determine the amount of air space required by poultry. They studied the frequency and rate of respiration in fowls, the amount of carbon dioxid thrown off, the amount of vitiation of the air which the fowls could stand without injury, and examined different types of poultry houses with reference to their stability for furnishing proper conditions of ventilation. Assuming that the air of poultry houses should not contain more than 9 parts of carbon dioxid per 10,000 of air they estimated that each fowl must be supplied with about 40 cubic feet of air per hour, the requirements of small fowls being practically the same as of large.

In wooden poultry houses with ventilation at the top the air apparently changes about four times per hour. Each bird must therefore have 10 or more cubic feet allotted to it.

The number of birds a house will hold depends on its volume and not on the floor space or perch room. The maximum number is found by dividing the volume expressed as cubic feet by ten. We prefer to keep within this number.

The greatest capacity can be most economically obtained from a given amount of timber if the house is cubical in shape. This cannot be quite realized in practice owing to the necessity for a slooping roof, but the nearer one gets to it the better.

Low houses, besides being uneconomical, tend to induce overcrowding.

Overcrowding causes diminished egg production and encourages roup, tuberculosis, and other diseases.

The atmosphere in a long, low house with the bottom out is about twice as good as one with the bottom in. The air changes about twice as quickly, and it would appear this must be accompanied by a draft.

Excellent results, both as regards ventilation and warmth, have been secured at the Maine Station by the use of the curtained front poultry house with curtained roosting closets shown in figures 1 and 2. This building is 14 feet wide and 150 feet long.

The back wall is 5½ feet high from floor to top of plate inside, and the front wall is 6 2-3 feet high. The roof is of unequal span, the ridge being 4 feet in from the front wall. The height of the ridge above the floor is 9 feet. The sills are 4 by 6 inches in size and rest on a rough stone wall laid on the surface of the ground. A central sill gives support to the floor, which at times is quite heavily loaded with sand. The floor timbers are 2 by 8 inches in size and are placed 2 feet apart. The floor is two thicknesses of hemlock boards. All of the rest of the frame is of 2 by 4 inch stuff. The building is boarded, papered, and shingled on roof and walls. The rear wall and 4 feet of the lower part of the rear roof are ceiled on the inside of the studding and plates and packed very hard with dry sawdust. In order to make the sawdust packing continuous between the wall and roof, the

FIG. 1.—TWO SECTIONS OF CURTAIN-FRONT POULTRY HOUSE.

wall ceiling is carried up to within 6 inches of the plate, then follows up inclining pieces of studding to the rafters.

The short pieces of studding are nailed to the studs and rafters. By this arrangement there are no slack places around the plate to admit cold air. The end walls are packed in the same way. The house is divided by close board partitions into seven 20-foot sections; and one 10-foot section is reserved at the lower end for a feed storage room.

Each of the 20-foot sections has two 12 light, outside windows screwed onto the front, and the space between the windows, which is 8 feet long and 3 feet wide down from the plate, is cov-

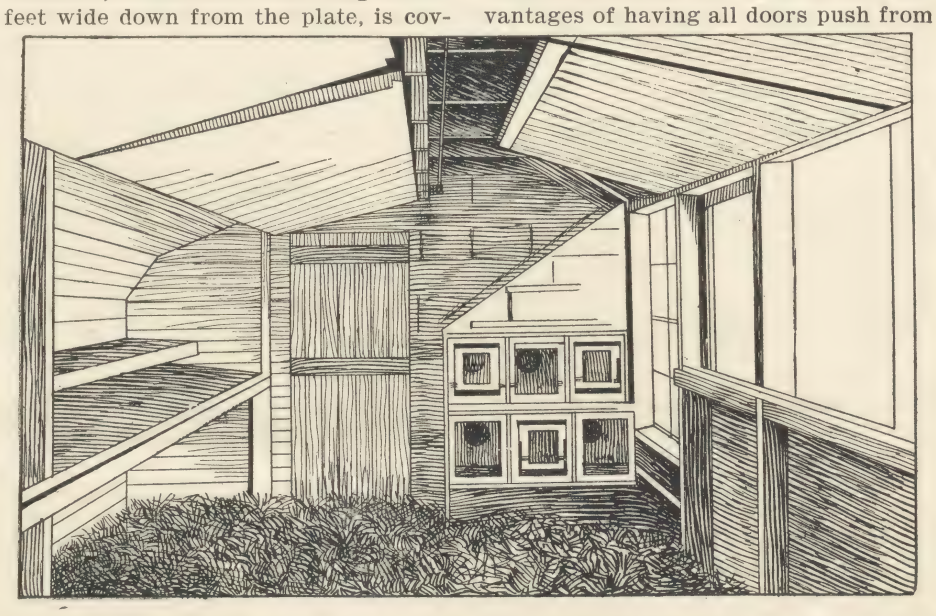

FIG. 2.—INTERIOR OF ONE SECTION OF CURTAIN-FRONT HOUSE, SHOWING ALSO TRAP NESTS IN ONE CORNER.

ered during rough winter storms and cold nights by a light frame covered with 10-ounce duck closely tacked on. This door or curtain is hinged at the top and swings in and up to the roof when open.

A door 2½ feet wide is in front of each section. The roost platform is at the back side of each room and extends the whole 20 feet. The platform is 3 feet 6 inches wide and is 3 feet above the floor. The roosts are of 2 by 3 inch stuff placed on edge and are 10 inches above the platform. The back one is 11 inches out from the wall and the space between the two is 16 inches, leaving 15 inches between the front roost and the duck curtain, which is sufficient to prevent the curtain being soiled by the birds on the roost. The two curtains in front of the roost are similar to the one in the front of the house. They are each 10 feet long and 30 inches wide, hinged at the top, and open out into the room and fasten up when not in use Great care was exercised in constructing the roosting closets to have them as near air-tight as possible, excepting what may be admitted through the cloth curtain.

Single pulleys are hung at the rafters and, with half inch rope fastened to the lower edge of the curtain frames, they are easily raised or lowered and kept in place. At one end of the roosts a space of 3 feet is reserved for a cage for broody hens. This being behind the curtain, the birds have the same night temperature when they are transferred from the roosts to the cage. Six trap nests are placed at one end of each room and four at the other. (Fig. 2.) They are put near the front, so that the light may be good for reading and recording the number on the leg bands of the birds. Several shelves are put on the walls 1½ feet above the floor for shell, grit, bone, etc. The doors which admit from one room to another throughout the building are frames covered with 10-ounce duck, so as to make them light. They are hung with double-acting spring hinges. The advantages of having all doors push from a person are very great, as they hinder the passage of the attendant with his baskets and pails very little. Strips of old rubber belting are nailed around the studs, which the doors rub against as they swing to, so as to just catch and hold them from opening too easily by the wind. Tight board partitions were used between the pens instead of wire, so as to prevent drafts. A platform 3 feet wide extends across both ends and the entire front of the building outside.

The house is well made of good material and should prove to be durable. It costs about $850. A rougher building with plain instead of trap nests, with the roof and walls covered with some of the prepared materials, instead of shingles, could be built for less money, and would probably furnish as comfortable quarters for the birds for a time as this building will.

This house accommodates 350 hens —50 in each 20-foot section.

Even in very severe weather when the temperature at night was considerably below zero and rose but little above it during the day, with high winds, the bedding on the floor and the roosting closets remained dry and free from offensive odors. The fowls laid as well as their mates in a large warmed house, their combs were red and their plumage bright, and they gave every evidence of perfect health and vigor. "The birds seemed to enjoy coming out of the warm sleeping closet down into the cold straw, which was never damp, but always dry, because the whole house was open to the outside air and sun every day. There were no shut-off corners of floor or closet that were damp." No cases of cold or snuffles developed among the fowls.

It is customary to have the wards on the south or sheltered side of poultry houses to afford protection during late fall and early spring, when cold winds are common. With the curtain-front house north yards only are to be used, it being believed that the necessity for getting the fowls as soon as possible out of the open-front house where they are really subject to most of the out-of-door conditions during the daytime is not so great as when they are confined in closed houses with walls and glass windows. "The clear open front of the house allows teams to pass close to the open door of the pens for cleaning out worn material and delivering new bedding, and also in allowing attendants to enter and leave all pens from the outside walk, and reach the feed room without passing through intervening pens."

FOXES AND POULTRY.

These often occasion heavy losses in some districts. There is no sure precaution beyond shutting up, which is not always possible, but there are several "dodges" which have proved of considerable efficacy. One is to make the hole for the fowls up on one corner of the house, and only to be reached by a sort of wooden tunnel, 4 ft. or 5 ft. long, along the side of the house, through which the fowls walk and then turn in. Putting the birds in once or twice to walk out, they soon learn, but the foxes, which are very suspicious, regard it as a trap, and scarcely ever enter a house so protected. Another plan is to encircle the house with a loose piece of wire netting. This acts in the same way, and, indeed, a sylinder of netting a foot in diameter near the door will often scare foxes away for several nights together. So will often a couple of red rags tied to the tops of two sticks or wires, and planted each side of the entrance. When either of the last two expedients is employed the position of the piece of netting or of the rags should be varied every few days, that the vermin may not become accustomed to it.

FEATHERED WORLD.

* * *

The bills of Aylesbury Ducks will change color and water will often affect them. A ferruginous soil will sometimes alter the color so that they become yellow and water draining from peat land will make the bill orange. The color of the bill should be a delicafe pale flesh tint or a Franch white.

CLASSIFIED ADS

ANCONAS

MAINS' STRAIN OF ANCONAS HAVE proven their quality at Madison Square Garden, N. Y.; Hagerstown, Md.; Allentown, Pa.; Newark, Dover and Morristown, N. J. Finest exhibition stock; a specialty for the fall and winter shows. Frank W. Mains, Morris Plains, N. J.

BANTAMS

BLACK AND BUFF COCHIN BANTAMS that win. At Madison Square Garden, on 4 entries in Blacks, all firsts. At White Plains, all firsts, seconds, thirds and specials. Winning also at Stamford, Hartford, Newark and Trenton. A few good ones to spare. All stock guaranteed. James B. N. Fitch, Mt. Vernon, N. Y. 684-707

AMERICA'S BEST BANTAMS FROM THE **best strains on earth. Golden and Silver Seabrights**, Blacks, Reds and Silver Duckwings; White and Black-Tail Japanese; Black Rose Combs. Eggs $2.00 per 13. Stock $2.50 to $5.00 each. One trio of Red Piles for sale cheap $5.00. W. T. Hume, Auburn, N. Y. 684-707.

FOR SALE—300 GAME BANTAM CHICKS; 150 of them ready for fall Fairs. All varieties. Write or call at once and get the cream of this bunch. D. G. Witmyer, Lititz, Pa.

MY BUFF COCHIN AND B. B. RED GAME Bantams have always been winners. Birds I have bred and raised have captured the Blue at such shows as Providence, Stamford, Springfield, Boston, Danbury, Newark and many others. This is a proof of the quality of my stock. Will offer my breeders at a low figure, some of which are winners. F. A. Wheeler, Slatersville, R. I. 684-685

FOR SALE—THE FOLLOWING HIGH-CLASS Bantams: 2 pairs White Japs, 2 pairs Black-Tailed Japs, 1 Black Jap Hen, 3 pairs Bearded White Polands, 2 pairs White-Booted, 2 pairs White Frizzels, 2 pairs Golden Seabrights, 2 pairs Black Rose Combs. The above contain many winners at New York, Boston, Toronto, London and the Ontario. Also 150 April and early May hatched chicks in the above varieties. I can supply winners for the fall shows. T. J. Kiley, 855 Maitland St., London, Ont. 684-687

D. M. GREEN, SYRACUSE, N. Y., ORIGinator of the famous Yellow Jacket strain Buff Cochin Bantams, the strongest blood lines in existence; have bred more winners and furnished the foundation of more good flocks than all others; eggs $3.00 per sitting. 664-696

GEORGE A. FRANCIS, 129 DEACON ST., Bridgeport, Conn., will sell entire stock of Black, Red and Red Pyle Game Bantam fowls and chicks; if you want winners at a reasonable price write at once; will exchange for hand or foot power printing press 6x9 or larger.

DARK BRAHMA BANTAMS. GET BIRDS that will win at the winter shows now,, as I expect to sell my entire stock, including Madison Square prize winners. Birds, $3.00 to $5.00 each. Lone Oak Bantam Yards, Washingtonville, N. Y.

CHARLES JEHL, LONG BRANCH, NEW Jersey. The Buff Cochin Bantam Specialist offers after October 1st; young stock from $5.00 and upward per pair. Winner at the Great Madison Square Garden Show, New York, of 88 prizes, cups medals and diplomas.

BUCKEYES

BUCKEYE REDS, ALL SIZES, FROM FIRST prize stock, at Erie, Wilkes Barre, Pa., and Madison Square Garden, N. Y.; buy your stock now and get them cheap; trios at $3 and $5. A beautiful general purpose Red Fowl. W. G. Judson, Meshoppe, Pa. 684-686

FOR SALE

FOR SALE OR EXCHANGE—POULTRY, Pigeons, Dogs, Angora Cats, Belgian Hares, Rabbits, Rats, Mice, Guinea Pigs, Incubators, Brooders and supplies. F. O. Grossbeck, prop., estab. 1888. Breeder, Exhibitor, Shipper and Judge. Correspondence solicited. Box S Hartford, Conn. 684-707

SHETLAND PONIES, FERRETS, POULTRY, pigeons, pheasants, rabbits, guinea pigs, goats, cats, dogs; 2 cent stamp for circulars. Address Col. Joseph Leffel, Springfield, O. 684-686.

OAKVALE YARDS—Buff and Columbian Wyandottes are three hundred strong and better than ever before. For the past six years they have received the highest esteem among our many patrons. Also S. C. Buff. Leghorns that are just right. Your trade solicited. Satisfaction guaranteed. E. S. Wilson, So. Hammond, N. Y.

GAMES

I BREED BUFF LACED INDIAN GAMES, which for beauty, laying qualities and market purposes cannot be surpassed. I never failed to win a ribbon on my Partridge Wyandottes, having won second on Cockerel at Boston 1907 and first on Games. Eggs in season; stock limited. Frank C. Burbank, Sandwich, Mass. 684-687

BLACK, RED, EX GAMES, AMERICA'S Finest. Fanciers looking for the best in these the aristocrats of fowldom, should write, Mudge & Son, Westerly, R. I.

LANGSHANS

CHAMPION BLACK LANGSHANS; WON more prizes at the last New York show than other two breeders; nine entries, 9 Ribbons, 2 firsts, 3 seconds, 2 thirds, fourth and fifth prizes; some fine breeders for sale; young stock in September. Henry Cundel, Palisade Ave., Englewood, N. J. 684-685

LEGHORNS

I HAVE A GRAND LOT OF YEARLING hens, Bright's strain Brown Leghorns, and a pen of Rice's strain White Leghorns, that I am selling at $1.00 each. They are large size and great layers and win in the show-room and no culls. F. T. Weatherill, Elnora, N. Y. 684-685

C. bantams silver cup winners, $5; trio silver seabrights winners, $5; trio Golden seabright, $3; trio Buff Cochins, $5; solid Buff trio Black Cochin, $3. Two pair Lt. Brahma Bantams, $5. These are all good stock and will sell any or all on approval or will exchange for good Buff Rocks. H. Beck, Ravenna, O.

THINGS I WOULD NOT BE.

Uno-Hoo.

I would not be a barnyard hen,
To scratch and peck and scratch again,
And lay my eggs for selfish men,
Nor cackle-ate on what I'd layed
And loaf around in sun or shade,—
You see that's not the way I'm made!

I would not wish to "sit and sit,"
For forty days or nearly it;—
I'd never know just when to quit!
I would not care to strut around
And count the chicks that I had found
And scratch for them all o'er the ground.

Nor would I care for Biddy's share
Of poet's praise and fame so fair,
That is a hen's—most everywhere;—
Oh, no, I would not be a hen
For anything that's known to men,
I'd rather be a "rooster"—then!!!
—"Progress."

* * *

Young Wife: "Today is the anniversary of our wedding. I shall have one of the chickens killed in honor of the occasion." Her Husband: "Oh, leave it alone; it wasn't the chicken's fault!"—Exchange.

"Which is correct." asked a summer visitor who wished to air his knowledge, "to speak of a sitting hen or a setting hen?' "I don't know," replied the farmer's wife, "and, what's more, I don't care. But there's one thing would like to know: When a hen cackles, has she been laying, or is she lying?"—Exchange.

When you write to an advertiser please say that you saw the advertisement in The American Fancier. This will help you and will also help us.

PROFITS IN POULTRY KEEPING SOLVED.

Title of my new book, which is revolutionizing the poultry business all over the country. My great feed at 10c. per bushel, will save you $25.00 a year, on every 100 hens you feed, as well as increase your egg yield over 30 per cent. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1¼ to 1½ lbs. in seven weeks on it. No science required to feed my system. Are your pullets laying at four to five months old? If not, you have fed wrong. Failures impossible where my system is used. My second edition of 3,000 copies revised and enlarged now ready. Write to-day and stop that big feed bill.

Circulars and testimonials free.

W. H. CARD

Assistant Secretary of the American Polish Club.

"Better ones at home," never win blue ribbons by staying there.

A good loser commands more respect than a good winner.

Condition is a winner. Cleanliness is next to Godliness.

Fowls with scaly legs, broken and mussed feathers, generally have an owner with dirty finger nails, etc.

The crest of a wave signifies that even Neptune loves the Polish fowls.

The Boom of some breeds spell Doom, but the Polish go on forever.

Since Adam first shelled corn in the Garden of Eden have the Polish fowls been pre-eminent as the Fancier's Ideal.

As a match smells of brimstone so does the Utility Fowls smell of Commercialism.

As the scent of a fragrant flower, so are the Polish to the true fancier.

Not to advertise means to live in a cellar and die in a sewer.

The sunlight of Public Notice shines brightest in the window of the breeder who exhibits.

Enthusiasm, one object, one aim and everlastingly at it wins out.

Polish fowls to-day, to-morrow and all the time.

RHODE ISLAND REDS IN UTAH.

Being an amateur in the poultry industry and especially in breeding Rhode Island Reds, I do not feel competent to write an extensive article on this fast growing popular breed. Six years ago a friend of mine brought them into this neighborhood (and I believe it was the first in the State). They proved to be extra fine layers, but poor show birds. They soon became known, and he sold eggs and stock to a great many throughout the county, besides shipping some. Utah is known for her peculiar people, but they seemed to know a good thing when they saw it. Reds have grown wonderfully in popularity, for we see them on every hand. I think we can not only boast of quantity, but also of quality, for at our last show they exceeded in numbers, and I believe in quality the old reliable Barred Plymouth Rocks. Many have said they would discard all other breeds in the future for the Reds. I believe in Utah, as much as anywhere else that I have been, the people (at least a majority of those who keep poultry) look first to the dollar and cent side of it, so all Red breeders will readily see the reason they are getting so popular. With me they have been the best of winter as well as summer layers of large eggs. They cannot be beaten for table use. They are good setters (but not persistently so with me) and good mothers. They mature earlier than any other fowls that I know of for their size, and above all they are hardy and will stand rough handling. They are a farmer's fowl, as they will stand considerable neglect. The greatest and first criticism we hear is, that they do not run true to color or uniform in color, but I believe we can justly claim for them that they run as true to color as any other breed to-day.

R. ROWBOTHAM.

Dandelions and chopped onion tops contain medicinal properties which act as a tonic on the liver. They make fine food for young turkeys.

The American Fancier

VOL. XXVII NEW YORK CITY, SEPTEMBER 1, 1907 No. 686

HAMBURGS

By Dr. J. S. WOLFE, Judge at Madison Square Garden, 1907.

THE STANDARD says that the Hamburg family displays an exceedingly graceful and symmetrical type. A very exact design of markings has been established in both the Spangled and Penciled varieties. The coral-like combs on all six varieties are in harmony with their delicate grace of form and carriage, and the large, round, pure white ear-lobes in striking contrast, add to the general pleasing effect.

Of all the many Standard breeds, we believe none have received a higher encomium from the compilers of our Standard than the Hamburg.

Where are we to find a more aristocratic, a more thoroughbred fowl than the Hamburg? Its history is sublime, and the more we research it the more wonderful it is. There are many popular fowls of to-day whose history can be traced no further back than a score of years, while that of Hamburgs goes back centuries. The famous work on Natural History by Aldrovandi, published in 1599, mentions a breed of fowls, the description of which fits remarkably well the Hamburg. He speaks of their white bodies, black markings, greenish black tails, and blue-tinged legs.

It would be difficult to find a better or more satisfactory endorsement of them, as a fowl of merit than this long period of uninterrupted breeding they have enjoyed.

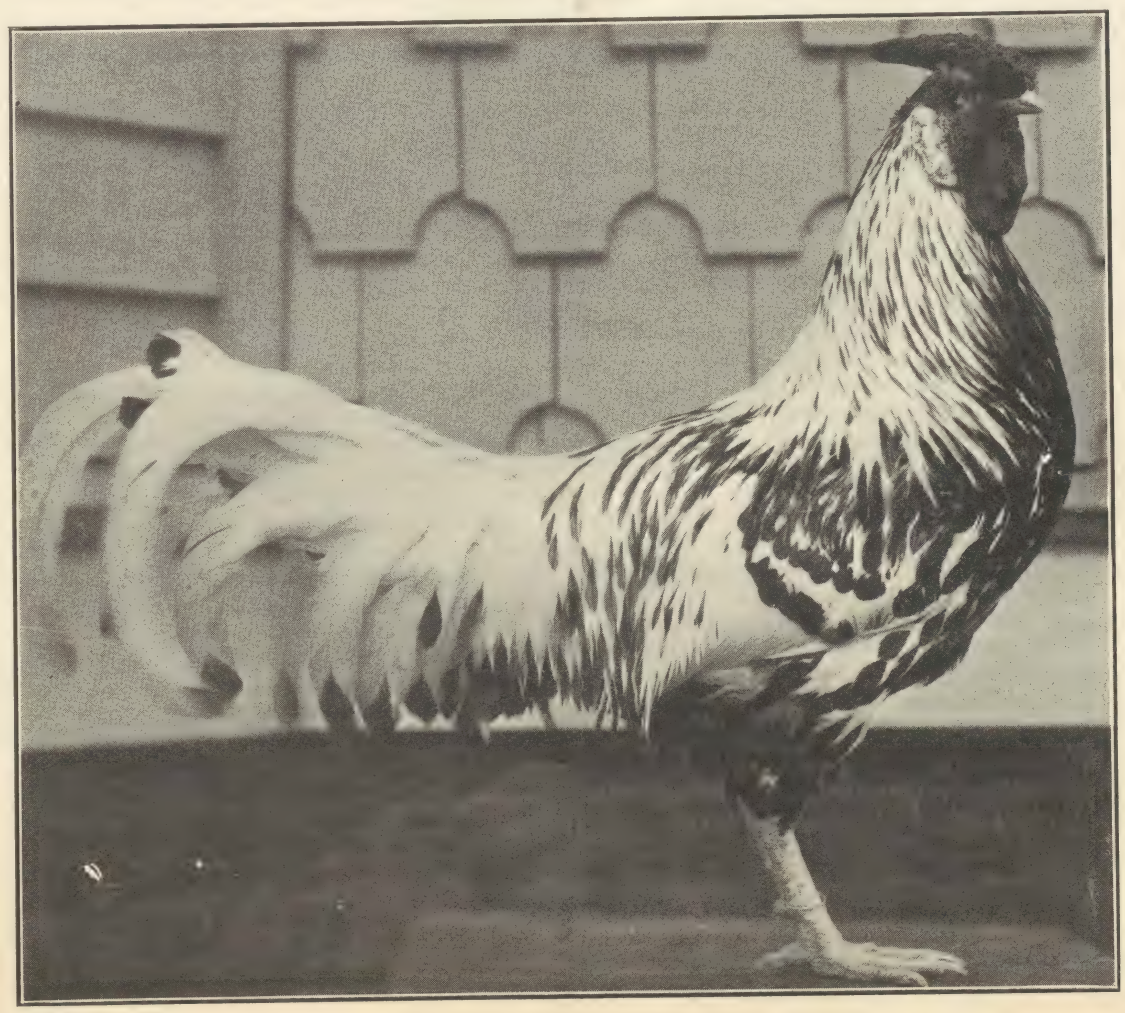
While many other breeds have come, been tried, and have fallen by the wayside, the ever-useful and beautiful "Dutch Every-Day Layer" has held her own; and we believe could be made to yet outstrip many of her later rivals for popularity, if the fanciers who have the breed in hand would strive to improve their size. Of course, never losing sight of the beautiful symmetry of the true Hamburg.

There are six varieties of Hamburgs, as follows: Golden Spangled, Silver Spangled, Golden Penciled, Silver Penciled, Black and White. In character, shape and general appearance they should be alike, differing only in color of plumage, although the penciled varieties, as found in our show rooms, are somewhat smaller in size than the other varieties.

The typical Hamburg is dainty and graceful in appearance; the male is especially proud and aristocratic in his make-up, with his full, rounded breast carried prominently forward, his neck beautifully arched, his large wings carried rather low, and his tail, with long curving sickles, and abundant coverts and saddle, is carried so proudly that even the lordly Langshan is rather commonplace in comparison.

The White Hamburg is pure white throughout. With their red well-fitting combs, round white lobe and blue legs, they are of rather striking appearance. They have never attained the popularity they deserve, perhaps due to their being somewhat delicate. Then, again, the color of their legs may be against them, as our fanciers seem to take more to the yellow leg as seen on our more popular white fowls.

The Black Hamburg is, as the name indicates, solid black throughout, without white tips in any part of the plumage. In the blacks we have the most beautiful irridescent greenish sheen to the plumage that is found on any of our domestic fowls. On a well-bred male this is most beautiful to behold, and holds one spellbound in admiration. The Blacks attain greater size than any of the other varieties, with, perhaps, the exception of some of the Silver Spangled shown by a few exhibitors at our larger shows.



The markings of both the Golden Penciled and Silver Penciled varieties are very striking, and when accurately penciled they are very attractive. As their name indicates, the ground color of the feathers of the Silvers is pure silvery white, free from mossing or smuttiness, while that of the Goldens is a reddish bay. The penciling consists of narrow parallel bars of greenish black, which extends straight across the feathers.

The males of the Penciled varieties are strikingly handsome, and are usually very strong in head points, the combs being frequently the nearest perfect of any of the Hamburgs.

The Spangled varieties are also divided into Golden and Silver, as in the Penciled. And here we have the same color effects of reddish bay or white as the ground color of the feathers, with a greenish black tip or Spangle to each feather. Our Standard requires the spangle to follow the web of the feather to the shaft, giving a point to the Spangle; while the English breed for the round or moony Spangle. These colors make a very pretty contrast in well-marked specimens.

Of the six varieties of Hamburgs, the Silver Spangled are far the most popular in this country, being kept by many for their great egg-producing qualities, also by many of our wealthier people, who esteem them for the above quality and their elegance and grace of carriage and beautiful plumage. This is especially true throughout New England, where they are found bred to a high state of perfection on many fine estates.

In the spring of 1892 the writer began breeding Silver Spangled Hamburgs purely for pleasure and show. With what degree of success in the show room, we must modestly refrain from saying, but will let our show record speak for itself. But we will say that for

SILVER SPANGLED HAMBURG "SILVER KING" BRED AND OWNED BY DR. J. S. WOLFE.

these fifteen years they have never been a disappointment, but rather a never-failing source of pleasure as well as profit. If any one is looking for a variety of fowl that will fully satisfy his æsthetic taste, we would unhesitatingly recommend the Silver Spangled Hamburg as embodying all that one can desire, in a domestic fowl, with possibly the one exception of "meat"; and here let me say that if any one wishes the finest that grows let him try a young Hamburg. They are exceedingly tender and gamey in flavor.

The opinion seems to be general that the Hamburg is hard to raise. Surely we have never found the Silver Spangled to be so, although we always give our young chicks good care and plenty of dry feed of mixed grains. We have long since abandoned the soft mash feeding of our young Hamburgs.

A comfortable house, free from cracks and crevices, board floors, and well lighted, is all that they require. Dampness is a great drawback to them, and the litter on the floor should never be allowed to become so. The house should also be well aired during the day to prevent dampness from accumulating on the walls.

They are noted for their laying qualities of fine white eggs; and, being non-sitters, they make a good showing in their yearly egg production. If well cared for and comfortably housed, summer or winter seems to make little difference in their egg production, as they "shell them out" with great regularity the year around.

And here we wish to correct the erroneous opinion that many people have, that the Hamburg lays small eggs. Many believing that they are so small that they are not salable in market. This we know to be a libel on the Silver Spangled variety, for after fifteen years of breeding to attain larger size in our Silvers, we have a strain that lays eggs that will compare favorably with most of the larger breeds.

If we consider the cheapness with which Hamburgs may be kept, we will realize more fully the profits that may be derived from them. They are extremely small eaters, even more so than any other variety of fowls. On a farm or suburban residence, where unlimited range may be had, they are great foragers, and will gather 75 per cent. of their living. They may be kept in good-sized runs, where grass is plenty, and shade provided, with quite as good success as on free range.

The chicks mature early, with proper care, are hardy, and the pullets begin laying young. The Hamburg only needs the care and attention due them to make them a favorite with all classes. Try the Silver Spangled Hamburg and see if they do not come up to your expectations.

PREPARED FOR THAT.

Teacher—Why did Hannibal cross the Alps?

New Pupil—Same reason the hen had fur crossin' the road. You can't fool me with no conundrums."

When writing advertisers, please say you read their advertisement in "The American Fancier."

Buff Orpington Chicks, five days old, owned by J. KRUSE. (*Courtesy of Horseman and Stockmau Pub. Co.*)

Pure Bred Fowls.—The advantages of pure-bred poultry over mongrels and grades cannot be pointed out too often, says the "American Agriculturist." By far too many farms keep all sorts and mixtures of breeds on the place, instead of the one well selected breed that would return them double the profit. Beak for beak, well-bred poultry eat no more than mongrels. Pound for pound the meat breeds cost no more to raise; but are worth the difference. Egg for egg the laying breeds and strains cost no more to feed, but double, triple and quadruple the profits derived from scrubs. Everything is in favor of pure breds. This point can never be put too strongly. We know from our own experience what satisfaction there is in the possession of a large flock of uniform birds, may they be black, white, red, brown or speckled, so long as they are all alike. And when you have such a flock, people will want to come and buy a cockerel or two, or a trio, willing to give two, three or more times the price of mongrels for them. The pure breds of selected strains will lay more eggs, at less cost, and the eggs will sell for hatching at $1 or $1.50 per sitting instead of going to the grocer or to the table at fifteen or twenty cents a dozen. What is worth doing at all, is worth doing well. If you keep any fowls, by all means keep the pure breds and maintain them at the highest standard. Select the breed you want. Then select the breeder from whom to purchase a male and three or four hens. You will then be in a position to have eggs for hatching when you want them, and possibly raise quite a flock for a starter of another spring.

HINTS FOR THE FANCY POULTRY BREEDER.

BY REESE H. JONES.

To the close student of poultry it is gratifying, indeed, to note the wonderful strides which have been and are being made in the fancy poultry business. Every fall season when the revival of poultry interests begins there are more to take up the work and add to the wealth produced by the American hen. Of all the branches of the poultry business, the fancy side is the one which offers the largest returns to those who are willing to put forth honest efforts. Scientific breeding of fowls is an art in which to become proficient one must apply himself most diligently. It is a work which demands intelligent study and careful investigation of its underlying fundamental principles. It offers a wide field for the man with original ideas to work out his theories and demonstrate their practical value. During the last fifty years, covering the period of modern poultry interests, the quality of domesticated birds has been greatly improved. New breeds have been originated and the old ones improved until to-day there is a great variety for the beginner to select from. The advice most frequently given to a beginner is to take up the variety which pleases him best. On first thought this seems to be good counsel, but further reflection shows it to be crude philosophy. We are not disputing the wisdom of this for the man of independent means, but it must be remembered that most of the fancy poultrymen are in the business for the money they can make out of it. Therefore it follows that the best thing for them to do is to take up one or more of the most popular varieties and by following this line of less resistance obtain more easily a market for their product. There are kinds of birds which were more popular in days gone by, and there are new ones which have not yet secured a sure foothold, and these are the ones which the beginner will best leave for some one else to champion.

For the one who is just starting with thoroughbred stock is the time for him to make his purchases. Nearly all of the fanciers have a surplus of stock on hand, and the best bargains are offered now. Also of the old fowls many are to be disposed of to make room for the young birds. To have the surest guarantee of success the foundation stock should be bought from a breeder whose word can be depended upon and with years of experience to back his judgment. The most valuable stock to start with is yearlings, and if it is possible to get birds of this age having vigorous constitutions and conforming generally to standard requirements, it should by all means be done. And just another word with regard to purchases of foundation stock. It is not the quantity but the quality which the beginner should seek. Better to have a trio of first-class specimens than fifty of medium quality. This may be a somewhat slower manner of getting a start, but the very first season its advantages will manifest themselves in the superior quality of the birds raised. It should be remembered that all the leading strains have been built up from select specimens picked carefully from large flocks. By careful selection the law of like producing like will come into operation, and the fancier will in time become known for the excellencies of his stock.

There is one thing of which we wish to speak to the older poultrymen, as well as to the beginner, and that is concerning the vitality of the breeders. It is a fact not always appreciated that on this foundation rests the success of prosperous poultry raising. Too often in the wild rush for shape and feathers this is entirely overlooked, and the poultry raiser gives no heed to it until he is confronted with the stern fact that his flock is deteriorating. In selecting poultry at this time to be used for breeding stock next spring, the first consideration should be to get those which show every indication of having strong constitutions. As an illustration of what careful selection will do, the writer will give the facts of an experience which he had several years ago. It was just a small pen (fifteen birds), and they were kept in an inclosure on a town lot. They were Rose Comb Brown Leghorns. Their eggs were used for hatching continuously from the first of February to the first of July. Their fertility averaged as high as 92 per cent. and never lower than 85. A still more remarkable experience was that of a prominent fancier of this place. Conditions during the early spring of last year were unfavorable to hatching. As a result, hatchings had to be brought off during the hot summer months. The pen from which the eggs were taken consisted of Buff Orpingtons, thirty-eight hens and pullets, and was headed by a three-year-old male bird. A hatch taken off July 21 brought thirteen fine healthy chicks, and the other two eggs of the fifteen contained well-developed chicks that died about the eighteenth day—every egg fertile. About two weeks later another fifteen eggs were set from the same pen, now having thirty-six hens and pullets, with the same male bird as before. This time there were twelve healthy chicks hatched; one was dead in the shell and the other two eggs were infertile. Considering all the adverse circumstances where is there a parallel to this experience? This flock was possessed of wonderful vitality, which alone made possible the favorable results. Now what do these two examples show? Just this, if fowls inherit strong constitutions, the chances for success with them are much greater.

In concluding this article, we would write a few lines about a folly with which many are deluded. A common mistake with many poultry fanciers is to introduce "new blood" into their flock every year. If one takes the trouble to reason it out, he certainly would see the error of this. You are endeavoring to breed your fowls so as to conform to one ideal, and when new members are added to the flock from another strain having different characteristics, you destroy all the good which line breeding may have accomplished. Of course it may be necessary to purchase new stock every several years, but the specimens bought should be very carefully selected, and from a strain which conforms very nearly to your ideal. But if judicious line breeding is carried on you will have to resort to this very seldom.

* * *

For laying hens during the winter, second-growth clover is a good egg producer. Now is the time for farmers to properly cure some clover and save for this purpose.

COMMON SENSE—THE POULTRYMAN'S BEST ASSEST.

THOUSANDS of poultry keepers are to-day making either a complete or partial failure of the poultry business simply for the reason that they are depending for guidance upon a lot of theories found in books or papers, instead of upon the simple dictates of common sense.

I know a man who has made a great success as a lawyer. He has a hobby. It is poultry, and he finds considerable time to devote to it. Whenever he becomes connected with a legal case he handles it with the greatest ability, and he brings into action such remarkable powers of analysis that all associate counsel connected with the case willingly step into the background. But in his poultry operations, strange to say, originality plays no part at all. In the practice of his profession he will hesitate long before accepting as law a simple proposition of Blackstone or Chitty, and will not adopt it in practice until he has subjected it to the keenest criticism and most careful thought. But if a problem comes up in connection with his large flock of valuable fowls he will rush to a poultry paper, hunt up an article probably written by some obscure but ambitious hen man, who has perhaps kept a dozen hens for a couple of years, and accept anything he finds printed there as gospel truth.

This is merely one illustration of what I claim to be a curious fact, namely, that many people, for some unknown reason, fail to use in connection with their poultry business the same degree of common sense which they ordinarily use in the common walks of life.

I do not intend to imply by the above that I believe the poultry journals are of no value as guides. On the contrary, the poultry papers are of the greatest value to any poultry man, and the man who is wise has at least half a dozen of the best ones before him every month of the year. Many of the articles printed in these papers are written by men and women of practical experience, and are worthy of careful reading and thought. But even the ablest of these articles are not for a moment intended by their authors to be read except in the light of a liberal interpretation based upon the common sense of the reader.

One reason why so many large poultry plants are not successful is because the men who are behind the enterprise, who furnish the capital and necessary financial backing, are, in most instances, not connected with the plant in a practical way, and attend to the duties naturally connected with ownership, from a distance. The actual control of the enterprise is, in many instances, left with a manager. If the owner shows his desire to carry on the business in a common-sense, businesslike way, he makes the manager a virtual partner, and is then reasonably sure of getting efficient service from the man who acts as manager. But the chances are that the owner fails to use that degree of common sense which he would ordinarily use in connection with any other branch of his business, and fails to make his manager a partner, but retains him merely as a hired man. Acting in this capacity, it is very likely that the manager soon becomes a mere piece of machinery, and who can expect a piece of machinery to exercise common sense?

In every phase of poultry keeping, in feeding, housing, breeding, etc., there is opportunity for wide range of reasoning in solving the various problems, and you will invariably find that the men and women who are making the biggest success with their poultry are the ones who are using their heads and brains in determining what to do next, and how to do it.

All the poultry books ever published and all the poultry papers in the world will not enable a man to make a profit from poultry unless he reads them and follows their teachings and suggestions in conjunction with the dictates of his own common sense; and common sense alone, the poultry man's most valuable asset, would teach a man the way to success even if there were no other guides.

From a recent issue of Pigeons and Poultry we reprint the following:

WHITE WYANDOTTE STANDARD.

AS ISSUED BY THE WHITE WYANDOTTE CLUB.

GENERAL CHARACTERISTICS OF THE COCKS.

Head.—Short and broad. Comb: Rose, firm and even on head; full of fine work; low, square at front, medium in height and width, and tapering towards the spike, which should follow the curve of the neck. Ear-lobes and wattles: Medium length, fine in texture.

Eye.—Bright bay.

Neck.—Medium length, well arched, with full hackle.

Body.—Breast: Full and round, keel bone straight. Back: Broad and short. Saddle: Full and broad, rising with concave sweep to tail.

Wings: Medium size, nicely folded to the side.

Tail.—Well developed, spread at base; the true or main tail feathers carried rather upright; sickles of medium length.

Legs.—Tighs: Of medium length, well covered with soft and webless feathers. Fluff: Full and abundant. Shanks: Medium in length and strong.

Feet.—Toes: Four in number, straight and well spread.

General Shape and Carriage.—Graceful and well balanced resembling a Brahma in general outline.

Size.—Rather large.

Weight.—Matured cockerel about 8 pounds; adult cock about 10 pounds.

General Characteristics of the Hens.

Head.—Head, comb, face, ear-lobes, and wattles as in the cock, but the appendages smaller.

Eye.—Bright bay

Neck.—Medium length, with short, full hackle.

Body.—To correspond with that of the cock. Back: Short and wide at the shoulder.

Tail.—Well spread at base.

Legs.—As in the cock.

Feet.—As in the cock.

General Shape and Carriage.—To correspond with that of the cock.

Weight.—Matured pullets about 6½ pounds; adult hens about 8 pounds.

Serious Defects for which a bird should be passed.—Comb: Other than rose, or falling over on one side, or so large as to obstruct the sight.

Beak: Deformed.

Ear-lobes: Covered more than one-third of its surface with permanent white or yellow.

Back: Crooked.

Tail: Wry or squirrel.

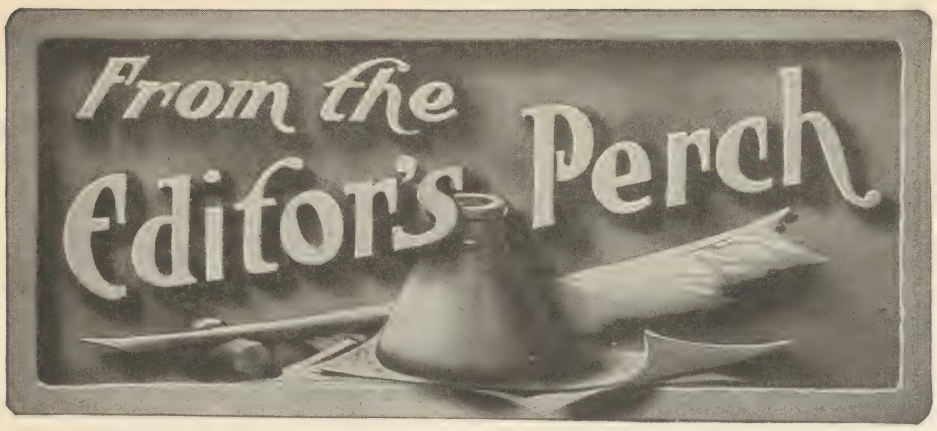
Legs: Feathered on shanks or toes; and other than yellow in color (except adult cocks or hens, which may shade to light straw color). Feathers: Other than white in color—Pigeons and Poultry, England.

* * *

Young ducks should have plenty of grit with which to grind their food.

* * *

Every proverb is contradicted by another: "Out of sight, out of mind," is contradicted by "Absence makes the heart grow fonder." It is true that "A rolling stone gathers no moss," and also true that "A setting hen gathers no feathers."



* * *

The American Fancier is mailed promptly on the first and fifteenth of each month. Subscribers who do not receive their copy within a reasonable length of time will confer a favor if they will notify this office.

* * *

TWO SILVER PLYMOUTH ROCKS. (*Courtesy of Poultry.*)

The illustration on our title page is made from a photo of Dr. J. S. Wolfe's Silver Spangled Hamburg "Boston Queen," first, Boston, 1907; also silver medal for the best S. S. or G. S. Hamburg female. On page 3 the illustration is of the Doctor's Silver Spangled Hamburg "Silver King," winner of first, Madison Square Garden. Both half-tones are made from photos that have not been retouched, nor in any way faked, but show the birds just as they are in life.

These were made expressly for the American Fancier, and have never before been published.

* * *

Up to the present time we have heard little or nothing regarding the sending of a team of American birds to compete at the Crystal Palace Show in London.

Last October 27th, by steamship Minnetonka, a consignment of American fowls left New York for the Crystal Palace Exhibition, which consisted of entries of White Plymouth Rocks and Bronze Turkeys from the Peapack Farm, Columbian Wyandottes from D. Lincoln Orr, White Wyandottes from Oceanside Farm and Buff Rocks from R. L. Hutchings.

The American team won Bronze Turkey cock second, White Rocks first and special hen, second cock; Columbian Wyandottes third hen and Buff rocks fourth and fifth.

This seemed to be a very encouraging start for international competition.

We believe Mr. D. Lincoln Orr was in favor of starting a club to exhibit at the Crystal Palace. Should this be the case, now is the time to perfect all plans.

* * *

A few of the coming exhibitions, we are glad to note, have selected new fanciers to handle the classes.

This should certainly be appreciated by the exhibitors.

Year after year many have been compelled to exhibit under the same judge, who probably has judged at nearly all the shows in the vicinity.

The all-round judge may be a necessity to the smaller associations, but we believe there are amateurs in most localities that have made a study of individual varieties, and are better qualified to handle these varieties than the all-round judge.

How can any one be capable of passing judgment on twenty or thirty different varieties? They cannot and never will be—it is simply a Jack of all trades and master of none.

The breeder or fancier of one or two varieties is the one who really studies —and knows that variety, and is by far a better judge, and should be given an opportunity.

At the large winter exhibitions specialty judges are employed, but at the smaller shows the man who can judge all varieties of poultry, pigeons and pet stock is employed. Sometimes he is asked to officiate in the kennel department, and usually accepts.

* * *

We notice in a few premium lists of both fairs and poultry exhibitions that the names of the judges are not mentioned. This is certainly a mistake, as often one does not care to send their birds unless they know who is going to officiate. Where more than one judge is engaged each judge should have his classes, and so named in the premium list.

The American Fancier is mailed promptly on the first and fifteenth of each month. Subscribers who do not receive their copy within a reasonable length of time will confer a favor if they will notify this office.

* * *

The premium money at the Sherbrook Show, Canada, will consist of $2 first, $1.25 second, $0.75 third, unless there are more than twelve entries in a class, in which case the prizes will be $3 first, $2 second, $1 third and $0.75 fourth.

When the exhibitions in Canada can give such premium money we should think that some of the big fairs held in this country could be more liberal.

It is absurd that one should go to all the expense of entry fees, express charges, etc., and then win all the leading prizes and come out a loser financially.

* * *

All exhibitions generally have a date named in the premium list as closing day for all entries. Does the man with a carload of every variety of poultry, water fowl, pigeons and pet stock observe this date? He generally arrives at the exhibition the morning of the judging, looks over the classes, and where competition is light—and it must be exceedingly so—he enters.

After the judging he has won a basketful of ribbons, and at the close of the season he is ready to sell his stock.

He has a record of winning over fifteen hundred prizes and specials during 1907, and so advertises. Who is fooled? Not the big breeders, because they are not generally purchasers, but the small breeder and beginner.

This class of exhibitors are a great detriment to the fancy and the exhibitions where they show.

The beginner purchases this stock at a fair price with the idea that he is breeding from a line-bred strain, ancestors all winners of firsts and specials at the big shows, when in reality he has a very inferior strain of a certain variety, and it is often years before he is properly informed.

* * *

A hen has laid 252 eggs in one year, is a statement of Prof. Gowell. In the month of May this hen laid an egg every day except one, and in 33 days laid 34 eggs. This is certainly "going some," as they say, and there must be good profits in the poultry business.

This hen by the above figures laid 21 dozen eggs during the year. At 30 cents a dozen (which is only a fair average price) this hen produced $6.30 worth of eggs in one year. The cost of keeping should not be over $1.50, leaving a profit of $4.80. Might be well for some of our millionaires to dispose of their railroad securities and start a chicken trust and elect Mr. Charles Cyphers president.

* * *

A Swiss village recently celebrated by decorating the town with bunting and flags, in honor of a hen which had laid its thousandth egg. The poultry industry must be advancing, especially in Switzerland.

* * *

Mr. C. P. Dewitt stopped at the American Fancier's office to renew his subscription. He has moved from Binghampton, N. Y., to Paterson, N. J., where he expects to bring his stock shortly.

President Roosevelt commented, in the June Everybody's Magazine, on some untruthful stories of certain Nature writers. It has started so heated a controversy that the President has written another article, four pages long, which is published in the September issue of Everybody's.

President Roosevelt gives his opinion on some "Nature Fakers" who hold positions in our leading scientific institutions, and write untruths about wild animals. From his many thoughtful paragraphs we herewith quote:

"We owe a real debt to the men who truthfully portray for us, with pen or pencil, any one of the many sides of outdoor life; whether they work as artists or as writers, whether they care for big beasts or small birds, for the homely farmhand or for the vast, lonely wilderness, whether they are scientists proper, or hunters of game, or lovers of all Nature—which indeed scientists and hunters ought also to be."

* * *

"In the wilderness, as elsewhere, there are some persons who do not regard the truth; and these are the very persons who most delight to fill credulous strangers with impossible stories of wild beasts."

* * *

"Of all these 'Nature Fakers' the most reckless and least responsible is Mr. Long; but there are others who run him close in the 'yellow journalism of the woods.'"

* * *

"What rational man would pay heed to a story that a fox when hunted killed a good-sized calf by a bite in the throat, and left it as a bribe to the hounds and hunters, to persuade them to leave him alone?"

"In another story the salmon is the hero. The writer begins by blunders about the young salmon which ten minutes' visit to any government fish hatchery would have enabled him to avoid, and as a climax, describes how the salmon goes up a fall by flopping from ledge to ledge of a cliff, under circumstances which make the feat about as probable as that the fish could use a step-ladder."

* * *

"Yet these same writers, who see marvelous things as soon as they go into the woods, are incapable of observing aright the most ordinary facts when at home."

* * *

"If the writer who makes such startling discoveries in the wilderness would really study even the denizens of a barnyard, they would be saved from at least some of their more salient mistakes. Their stories dwell much on the 'teaching' of the young animals by their elders and betters. In one story, for instance, a wild duck is described as 'teaching' her young how to swim and get their food. If this writer had strolled into the nearest barnyard containing a hen which had hatched out ducklings, a glance at the actions of those ducklings when the hen happened to lead them near a puddle would have enlightened him as to how much 'teaching' they needed."

* * *

We hope some one will write at length and expose some of the fake methods, stories and "fixed" up pictures, which are supposed to be authentic, and which are appearing in different poultry journals.

The entire article by President Roosevelt is great, and we have telephoned our congratulations to Everybody's publishers, and will see that President Roosevelt receives a copy of this issue of the American Fancier.

* * *

Lloyd M. Hallenbeck, Catskill Station-on-the-Hudson, called at he office of the American Fancier on August 23d, and says he will judge at a number of fairs during the fall and winter.

AMERICAN POULTRY ASSOCIATION.

Thirty-second Annual Convention, Niagara Falls, Aug. 13 to 15.

Owing to illness, Mayor Douglas was unable to be present, and Corporation Counsel MacKenna was introduced by President Grant M. Curtis and delivered the opening address.

About one hundred members were present and 206 new members enrolled—all of them $10.00 members. Heretofore the largest number of new members at one meeting was eighty-six, at the St. Louis World's Fair, October, 1904, and of these only thirty-two were annual members.

Mr. Geo. H. Burgott had letters and telegrams to prove that Mr. Hallock, the secretary, while a candidate wrote and telegraphed to different members that Mr. Burgott had withdrawn. The Board of Review officially returned Mr. Hallock as duly elected, and Mr. Burgott was persuaded by a number of members not to take any action. When it was found that Mr. Hallock he secured a record of the ballots, a statement was sent by the Election Commissioner to the other candidates. The following are the officers elected:

President, C. M. Bryant, Wollaston, Mass.; first vice-president, H. V. Crawford, Montclair, N. J.; second vice-president, Miller Purvis, Peotone, Ills.; secretary-treasurer, Ross C. H. Hallock, St. Louis, Mo. Executive Board members for three years, Wm. McNeil, London, Can.; Theo. Hewes, Indianapolis, Ind.; Grant M. Curtis, Buffalo, N. Y. Executive Board members for two years, Geo. D. Holden, Owatonna, Minn.; David A. Nichols, Shelton, Conn.; S. T. Campbell, Mansfield, Ohio. Executive Board members for one year, T. F. McGrew, Washington, D. C.; Reese V. Hicks, Knoxville, Tenn.; Geo. A. Barnes, Battle creek, Mich.

Mr. H. V. Crawford, Montclair, N. J., tendered his resignation as first vice-president, and Mr. Wm. McNeil, London, Canada, having accepted the presidency of the Ontario Branch Association, tendered his resignation as an elective member of the Executive Board, whereupon the Board, which is empowered to fill vacancies, seated Mr. Donovan as first vice-president, he having received the largest number of votes cast for this office, and elected Mr. Crawford to fill the vacancy on the Executive Board occasioned by the resignation of Mr. McNeil. As president of the Ontario Branch Mr. McNeil is entitled to membership on the Executive Board of the general association. Thus the arrangement herein described gives the American Poultry Association the services of Messrs. Donovan, Crawford and McNeil on its Execituve Board.

President Curtis read the treasurer's report, which showed $9,000 in the treasury.

The committee on color plates reported that the 1910 edition of The Standard publish the illustrations in natural colors. Mr. Curtis offered a substitute (of which the following is part) for the motion, which was seconded and ruled in order:

"That this association undertake the publication of separate breed standards, i. e., of separtely bound Standards of Perfection for the Plymouth Rocks, the Wyandottes, the Leghorns, etc., beginning with the breed that is most popular in the United States and Canada at the present time and taking up other breeds one at a time, in the order of their popularity.

"That each of these breed Standards shall be illustrated in black and white, to the best advantage, and shall also contain illustrations showing the natural or standard colors and shades of color of the different varieties of the breed, these colored illustrations to consist, so far as may be found practicable, of separate pictures, as nearly ideal as possible, both in shape and color, of a standard shaped male and female of each variety, said pictures to be shown in full profile, and

in the event that it is not found practicable or satisfactory to show the complete specimens in color, then sample feathers shall be shown, and should these be found impracticable, then patches of color illustrating the correct shades, as per Standard requirements, shall be used.

"That each of these breed Standards, which treat of the so-called utility or semi-utility varieties, shall contain text and illustrations descriptive of the standard size, standard shape and the standard color for eggs laid by the breed and the varieties thereof, also text and illustrations descriptive of standard requirements, as regards shape, color of skin, etc., for dressed specimens, together with sample forms of score cards to be used in judging eggs and dressed fowls of the breed and of each variety thereof."

The amendment to permit the secretary to do work other than that of the association was voted down. The secretary's salary is $1,500 a year, and $520 extra for clerical help. His entire time must be devoted to the association.

The different committees made valuable reports and there were some interesting lectures delivered and papers read. Also some interesting debates. Several important measures were adopted at the business session of the convention. Also by the Executive Board. Amendments to the constitution were adopted, which no doubt will facilitate the method of voting by mail.

The business meeting adjourned to meet at 8 P. M. at the Clifton Hotel for the banquet.

* * *

The American Fancier will publish a full report of as many shows as space will permit. We have arranged to have representatives at all the leading exhibitions, and the list of awards, together with a write-up of the show, will appear during tne show season..

September 15th issue will start giving the show news, not only of advertisers, but all.

* * *

It makes a fellow feel good to open the mail and find a renewal subscription from one of the "big" poultry men who ten or fourteen years ago was only a small breeder, but who through these years has been a regular reader of the American Fancier.

* * *

The last two issues of the American Fancier struck a responsive chord in the hearts of our readers, and many have sent letters of the warmest commendation.

* * *

Many judges and leading exhibitors and small breeders have helped us by sending in, not only their own subscription, but subscriptions from three or four friends.

* * *

An editor's desire is to please his readers, but sometimes it is hard to know if he is or not. With each issue we try to give what our readers want, and we ask all to send us their criticisms. Write us wherein we fail and wherein we succeed.

* * *

October 1 to 4 are the dates for the Brockton Fair. The premium list is now ready.

* * *

L. W. Lott & Co., New York City:

Gentlemen—Enclosed please find subscription of American Fancier, one year. Have no use for another poultry paper, but I do want one that will print complete reports of the large shows, and not make news and editorials subordinate to advertising. Subscriptions make the advertising profitable and subscribers should have rights over any advertiser. No one should subscribe for a paper or magazine that does not give complete show reports of winners.

Santa Ana, Calif. Yours, O. M. ROBBINS.

THE AMERICAN FANCIER

Established 1893.

A Magazine devoted to Standard-Bred Poultry, Pigeons, and Pet Stock.

LEONARD W. LOTT *Editors* *HARRY M. POCKMAN*

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations

Expirations—Paper is discontinued at completion of subscription term. If a subscriber wishes a subscription continued he must notify this office and send the amount in payment for same. If this notice is marked with a large blue "X" it means that the subscription has expired Renewal should be made at once to avoid missing a number.

Change of Address—When writing to change address, the old one must be given as well as the new.

Advertising Rates.

DISPLAY 10c per Agate line, 7 words a line; 14 lines to the inch.

Forms close the 10th and 25th.

The American News Co. will have charge of retailing the paper over the news stands throughout the United States.

Published by
Leonard W. Lott & Co.,
108 Fulton Street, New York.

Entered as second-class matter August 2, 1907, at the post office at New York, N Y., under the Act of Congress of March 3, 1879.

Advertising forms for September 15th issue close on the 10th.

* * *

Many poultry papers are thrown aside after being read, but the very nature of the American Fancier shows you that it will be preserved, and so stands a chance of being read by all those within whose reach it comes.

* * *

It does not cost much to tell our readers about the fowls you have for sale. Our advertising rates are only $1.40 an inch for display, and 50 cents for a 50-word classified ad.

* * *

The American Fancier is read by people who are looking for the best and have the means whereby they can purchase what they desire. These people are the most responsive and profitable class to whom an advertiser can appeal.

* * *

In addition to the old subscribers of the American Fancier we have added thousands of new ones. The old support and this new blood makes a fine combination, for it combines quality and quantity, and makes our advertising columns a pulling medium.

* * *

"Advertising is a science—not a guessing contest. Advertising must be done in a scientific way. Sit down and do some thinking, hard thinking. Study your business. Find out what classes of people your offer will appeal to." Then advertise in the papers that reach the class you want.

* * *

If you are going to get out a catalogue or any kind of literature, then write us for prices.

* * *

The American Fancier is mailed promptly on the first and fifteenth of each month. Subscribers who do not receive their copy with a reasonable length of time will confer a favor if they will notify this office.

* * *

Most all the leading exhibitors, fanciers and owners of the rich country estates are readers of this paper. Also thousands of beginners and farmers. The circulation has Quality and Quantity.

Augusta, Ga., August 20th, 1907.

American Fancier, New York City.

Gentlemen: Enclosed please find 50 cents to cover subscription to the Fancier. I am delighted to see the dear old paper again. To my mind it is the very best published, and I hope to be a subscriber for many years. With best wishes, yours faithfully,

DR. W. C. CLECKLEY,
President Augusta Poultry Ass'n.

* * *

With this issue the American Fancier enters its fifteenth year. Many of our present subscribers have been readers of this paper through these fifteen years. They are still with us, and have been most loyal in their support.

* * *

Every breeder and exhibitor should have the new edition of the American Standard of Perfection. Price, $1.50. Can be obtained from the American Fancier office.

* * *

Poultrymen can have their printing done by us at prices that are reasonable. We have the experience, and can turn out good circulars, catalogues, booklets, folders, stationery and any other kind of printed matter.

* * *

We can save you about one-half the price on any poultry paper.

* * *

SILVER WYANDOTTES.

Editor American Fancier.

Mr. Samson's article in your paper, and with his remarks published on page 419 in July, 1907, issue of the Reliable Poultry Journal, as follows:—

"At the late New York show the first and second prize pullets (Silver Wyandottes) resembled a turkey quite as well as a Wyandotte. True, the birds were well laced in all sections, but had long snake heads with roach backs, and most of the time did not carry their tails on a level with their backs."

are neither tasteful, tactful nor of benefit to the breed.

What right has a rival to use the press to run down the birds of a competitor?

When it is done in such silly remarks as "like a turkey," etc., etc., it is ridiculous.

A controversy on the relative merits of his or my birds would be small talk. I will not attempt to use your columns for such a purpose.

If the Wyandotte is a fowl of curves, that "shape makes the breed, while color designates the variety," why is it that whilst Wyandotte classes show a uniform shape—silvers are seen at some shows with Leghorn heads and size, others more like a Cochin, and both types winning? If the standard is a guide, how is it that there is no cut for size and no consistency in relation to shape, and as to color—after forty years—breeders show no advance of consequence, no nearness to the standard or illustrations it contains, and as compared with other branches of the same family, or other breeds, they declare themselves failures.

The parrot talk of some men only emphasize this.

My Silvers won first and second putlets, New York, under a leading breeder and judge of tne West. At Boston they won first hen, third pullet, under a former breeder, and one of the best Eastern judges; the best-known breeders competing. My males were not ready, and most of my old birds had been killed by a dog.

Is not this of more weight than the silly, thoughtless remarks of a rival?

If at the next New York or Boston shows men of the same high efficiency are appointed for the classes, I will show a cock, hen, cockerel and pullet, against him for anything he cares to name.

Mean spirit and ungentlemanly conduct has done much to place the Silvers where they are to-day, instead of their being at the top, where the parent stock belongs; where they belong because of their beauty, their hardihood, constitution, utility and real merit.

Let breeders work together for the benefit of their varieties, and not, whenever a new one appears on the scene, try to rob him of honors fairly won. Many have quit on this account, but I am not a quitter. Yours, etc.,

EDWIN H. MORRIS.
Sparkill, August 19, 1907.

* * *

Forestdale, R. I., August 23, 1907.

The American Fancier, 108 Fulton Street, New York, N. Y.

Gentlemen: Am glad to see the Fancier around once more. Being a Bantam breeder, and so practically all fancy, I hardly knew where to turn when the American Fancier stopped coming. Success to you.

We expect to have a rousing show the second week in December, and are hustling for specials, etc., now. Our treasury is in nice condition, with a large balance to start with, and we shall show the same liberal spirit as before in premiums, paying, besides a large list of $5 gold specials and silver cups, $2.50 first and $1 second, with an entry fee of 75 cents.

Our judges to date are A. C. Smith, on Barred Rocks and Leghorns; W. B. Atherton, on Buff and White Plymouth Rocks and all varieties of Wyandottes; H. S. Ball, on Brahmas, Cochins, etc., and W. H. Congdon, on Game and Ornamental Bantams. Very truly yours,

E. W. COOK,
Secretary Woonsocket Poultry Association, Forestdale, R. I.

* * *

The Hagerstown Fair will be held during the week of October 14th. The Jamestown Exposition Poultry Exhibition the following week. Birds can be shipped from Hagerstown direct to the Jamestown Exhibition.

* * *

* * *

Exhibitors must furnish their own coops at the Nashua Fair, which opens September 2d.

* * *

The judges for the Taunton Fair are W. B. Atherton, A. D. Leonard, W. A. Hersey, G. Feather and A. J. Edwards.

* * *

September 11th to 15th are the dates of the Jeanerette, La., Fair.

Governor N. C. Blanchard will officially open the fair. The poultry department, it is said, will be the finest ever seen in the State.

* * *

The annual Poultry and Pigeon Show at Augusta, Ga., will be held November 4th to 9th, 1907, instead of December 9th to 13th, as stated in the American Fancier last issue.

The association has already eleven silver cups, cash prizes, one of which is $25 in gold for the best cock, hen, cockerel or pullet, black-breasted, red game Bantam.

We understand Mr. George Weed and W. J. Stanton have been selected to place the awards at the White Plains Show, November 26th to 30th. Frank Gaylor, superintendent.

* * *

M. S. Gardner will place the awards at the annual exhibition of the St. Lawrence Poultry Association, to be held at Heuvelton, N. Y., January 21st to 24th, 1908.

* * *

Quincy Poultry and Pet Stock Association will hold its annual show at Quincy, Mich., December 19th to 23d, 1907. S. B. Lane will judge. A. E. Rogers, secretary.

* * *

The Lawrence County Poultry Show will be held at New Castle, Pa., January 1st to 4th, 1908. W. C. Denny will place the awards. D. R. Bollard, secretary.

* * *

Ira C. Keller will judge the poultry at the show of the Miami Valley Poultry and Pet Stock Association, to be held at Troy, Ohio, February 2d to 8th, 1908. R. P. Buffington, secretary.

* * *

January 7, 8, 9 and 10th are the dates for the Peterboro, N. H., Show. E. M. Ramsey, secretary.

* * *

When you write to an advertiser please say that you saw the advertisement in The American Fancier. This will help you and will also help us.

Springfield, Mass., August 19, 1907.

Editor American Fancier.

Dear Sir: Will you allow me sufficient space in your valuable paper to announce the formation of an Eastern Langshan Club by the election of the following officers: President, P. P. Ives, Guilford, Conn.; vice-president, Henry Cundell, Englewood, N. J.; secretary-treasurer, John Aldrich, Springfield, Mass.; directors—J. H. Baldwin, Plantsville, Conn., and E. T. Gibson, Nashua, N. H.

Every breeder of this grandest of breeds is invited to join in our campaign. Yours truly,

JOHN ALDRICH,
Secretary-Treasurer.

* * *

The following judges have been appointed at Buffalo, N. Y., December 16 to 19, 1907: Messrs. George O. Brown, William Barker, William F. Brace. Mr. J. G. Bicknell will superintend the poultry department.

Buffalo offers a great many opportunities, both from a commercial and fancy standpoint, being a centre of population, well situated on the Great Lakes, with Canada our immediate neighbor, a large daily attendance is assured. Excluding Madison Square Garden, Convention Hall is one of the largest show halls in the country. Present indications are for a large entry.

* * *

A poultry show will be held at Elmore, Ohio, by the Elmore Poultry and Pet Stock Association, of Ottawa County. J. P. Haack, president, and E. A. Hilgeneck, secretary.

* * *

The Guelph Central Fair, September 17-19, 1907, to be held at Guelpr, Ontario, Can., promises to bring a large entry in the poultry department. For many years in this vicinity poultry has had many admirers, and the display at the coming exhibition should be of a high quality.

* * *

Next week, September 9-12, New York State Fair at Syracuse, N. Y., will be in full swing. Fine buildings, the best of coops and liberal classification should bring out a grand display of both poultry and pigeons.

* * *

Every poultryman who can should attend the New York State Fair, Syracuse, September 9 to 14.

* * *

The awards at the Canadian National Exhibition, at Toronto, August 31 to September 6, will be placed by J. Bennett, Plymouth Rocks; E. Sites, Games and Game Bantams; J. H. Drevenstedt, Wyandottes, Asiatics, Orpingtons and Dorkings; W. J. Wolf, Leghorns; L. J. Jarvis, Polish, Turkeys and Waterfowl; J. A. Tucker, Hamburgs, Ornamental Bantams and Javas; T. Duff, Minorcas.

* * *

Geo. W. Hatt is secretary of the Wyomissing Poultry Association, which will hold their exhibition at Mohnton, Pa., on Nov. 27 to 30.

The Long Island Poultry & Pet Stock Association will hold an exhibition at Richmond Hill, L. I., on Nov. 19 to 22. Write Robert Seaman, secretary, Jericho, L. I., N. Y., for premium list.

The dates for the Wellsville, N. Y., fair are Aug. 20 to 23. L. E. Hopkins, secretary.

The Angelica, N. Y., sixty-third annual fair will be held from Sept. 3 to 6. J. C. Phippen, secretary; A. S. Stilling, judge.

November 19 to 22 are the dates for Marion, O., show. F. H. Owen, secretary.

* * *

S. Strong will judge at the Addison County Fair, Middlebury, Vt., August 27-30, and Rutland County Fair, September 3 to 5.

* * *

At a recent laying contest held in England the following varieties were the leaders:

In the open-air section the birds finished in the following order: 1st, buff Orpingtons; 2d, partridge Wyandottes; 3d, white Wyandottes. In the indoor section the order was: 1st, buff Orpingtons; 2d, white Wyandottes, 3d, golden Wyandottes. ,

White Leghorns, which finished at the top last year, are nearly bottom this year. The average works out at 156 eggs per pen, as against 150 last year and 140 the year previous, so that there has been a progressive improvement in egg-laying.

A gold medal was offered for each pen that laid 240 eggs in the sixteen weeks, but neither of the pens have quite attained this standard, the buff Orpingtons falling short by ten eggs. No fewer than five pens gain silver medals for over 200 eggs.

* * *

On the 10th of September the forms close for advertising for the September 15th issue.

* * *

During the past two weeks many inquiries have been made regarding the pigeon department of the Jamestown Exposition, but to date we have not been informed of either classification, premium money, specials or even the judges.

Why such silence should exist it is hard to understand.

There appears to be no interest shown in this section.

Jamestown should have had an up-to-date pigeon superintendent, one who was known to the fancy and was capable of drawing a large entry.

We well remember what a success the pigeon section of the Pan-American was under the management of C. E. Twombly.

Unless more activity is displayed in the pigeon department of the Jamestown Exposition it will be a failure.

The dates, October 22 to November 1, come at a time of the year when all birds should be entirely through the moult and fit for exhibition.

We would like to see Jamestown bring out a big entry. Thousands will visit the Fair, and this should be an ideal place to create enthusiasm in the pigeon fancy.

* * *

At this time of the year secretaries of the different clubs are generally found asleep (some never wake up), but most all do more to keep their variety alive than any officer of the club. To say the least, it is a thankless position; some one must occupy this place.

Unless a man can give it his time and attention, he should positively decline at the election.

The secretary cannot do it all, and should be supported by all club members if success is to be gained.

The specials bring out the entries at all the shows, especially club meets, and all members should try and help, by offering something, either cash or otherwise, no matter how small.

There are some fanciers who year in and year out capture a number of these valuable specials who never contribute one penny, except their annual dues of $1 or so.

* * *

Madison Square Garden will be the centre of the pigeon world December 17-21, 1907.

For many years this popular exhibition has been held in January.

We believe it was impossible to obtain the Garden during January.

Although these dates seem strange, it will give the exhibitors and birds a chance to rest up before Boston.

Two big fixtures coming too close together is not always well for either.

* * *

Fantail fanciers report a most successful breeding season, and the coming winter shows should bring together a grand display.

We remember not many years ago when the leading honors in these classes were always captured by two or three leading breeders. The only classes where real competition existed were the Whites, the colored classes consisting of a few, mostly owned by one exhibitor.

To-day it is different; the competition, instead of being between the two leading fanciers, is between over a dozen, not only in whites, but in all colors as well. The improvement has been wonderful and, better still, more fanciers own birds capable of sharing the honors.

Both New York and Boston brought out wonderful birds last season, and the present outlook is that 1907 will be far superior.

* * *

Mr. William McIntyre, formerly of Delhi, N. Y., has moved to Binghamton, N. Y. Mr. McIntyre has during the past few years purchased many Fantails from the leading breeders in this country, and now, owing to his removal, must sell his entire loft. We trust he will be so situated that in the near future he will be in a position to start again. All his birds are offered for sale in another column of this issue.

* * *

The wild pigeon, so numerous a few years ago, seems to have entirely disappeared, the Washington Post says:

You are often asked what has become of the wild pigeon. Before the Civil War, and for some years after, there were myriads of wild pigeons from the Atlantic Ocean to the Rocky Mountains. Since those days their numbers have rapidly decreased until now you rarely see one. The cause of their diminution is probably due to the rapid opening of the country since the war and the destruction of their breeding places by felling the timber, where thousands were caught for trap-shooting. In Illinois and Missouri, back in the 50s, they were so numerous that the breaking of limbs that were crushed by their weight when at roost was frequently heard at night for a considerable distance. In default of exact knowledge, fanciful theories have been advanced, such as that, having tired of frequent molestation, they determined to seek refuge in new regions across the waters and, exhausted in their flight, came down to perish in midocean.

None of our domestic pigeons have been produced from the native American stock, of which there are many species, especially in Central and South America, but all the various forms have been derived from the rock pigeon of Europe, which is still found in certain rocky places in England and the Continent, where it lays its eggs on rocky ledges.

* * *

A. E. Robst, of Rutherford, N. J., is working energetically to form a Helmet Club.

During the past couple of seasons quite a little interest has been shown in this variety, and some really first-class specimens have been produced and exhibited.

Already a number of fanciers have written Mr. Robst of their willingness to join such a club.

There is nothing that will promote a variety more than a live specialty club.

All fanciers interested in the advancement of this variety should write Mr. Robst.

* * *

The specials offered by the Dragon Club will not all be placed at the club meeting. This is indeed a wise move.

The best youngster at Hagerstown, Brockton and Providence will be awarded a solid silver spoon, thus making three exhibitions, outside the club meet, where competition will be exceedingly strong.

The officers of this club, especially Secretary F. H. Wright, deserve great credit in bringing to the fore the dragon.

The display at New York of over two hundred eighty in the single classes was an example of what can be done when energy is displayed in club work.

* * *

Just before going to press we hear the Jamestown Exposition will offer the following premium money in the pigeon classes: First premium, $2; second, $1. Six entries are required to fill a class. If four or five compete, the winner will receive second money. If less than four entries, winner will receive ribbon only. Entry fee will be 50 cents per bird.

Squab breeders, exhibition cages, entry fee $5.00. If eight cages compete, first prize, $8; second, $5, and third, $3. If four entries, first prize will be $5; second, $2. If less than four entries, first will receive second money and first ribbon.

By the above list and premium money, we hardly think many will risk sending their birds to Jamestown.

For an exhibition of such importance as Jamestown, we believe more encouraging prize money could be offered, and less number of entries required to fill the classes. Squab breeders' exhibition cages appeared to receive some attention, but unless one obtains a great amount of advertising it will hardly pay him to exhibit.

Great value appears to be placed on the ribbon award at Jamestown, and we hope they will be of fine quality, as they will certainly cost the exhibitors enough.

* * *

Much interest in the pigeon department of the great Allentown fair is being displayed by those in charge.

Besides the regular premiums in the open classes of $1.00 first, 50c. second, and ribbon third, on an entry fee of 25c., the association offers a number of silver cups and other cash specials.

The pigeons will be caged in up-to-date coops.

As there are only a few fairs where pigeons are properly classified and receive the right attention, Allentown should be well supported.

* * *

The coming exhibition to be held at Buffalo, N. Y., December 16-19, 1907, promises a large entry.

Mr. Charles E. Lang, the well-known Jacobin fancier, will act as superintendent of this department.

K. J. Muir, Harry Kirkover, Charles E. Lang and Henry Smith will judge the pigeons.

All the above-named fanciers are well versed in pigeon culture, and should draw a big entry.

* * *

In purchasing fancy pigeons, the beginner or novice should always go to the breeder.

You can always obtain birds with a pedigree which will be by far more likely to produce superior specimens than those purchased haphazardly.

It is far more profitable in the end to start with a known strain, the progeny will shortly repay the extra expense of making the right start. Remember the scrubs are dear at any price, while the true specimens are cheap at a long price.

FEEDING BANTAMS.

Summer has come, or ought to have come, and has brought with it a lot of wor for the Poultryman. The first thing to do is to provide good shelter. If you want good, strong, healthy offspring, keep your birds scratching at all times, and in real hot days see that they are provided with fresh, cold water, at least three times a day, and if possible let them out on a grass run for at least one hour a day. The worst thing for Bantams are the wet and windy days, during which time they must be kept indoors.

For rearing Bantams I prefer to use Cochin Game or Japanese Bantams, any of them being good mothers. If you are short of Bantam chicks, a very good way to do is to take a large hen (that is, of the light variety), and set her and a Bantam on the same date. When chicks are due, place all of them with the Bantam and throw the big hen out. The best thing to do when the Bantam chicks are coming out is to take them away so they won't be squashed by the hen, or if you do not do this, at least take all the egg shells out of the nest, so that when a chick is coming out of an egg another half shell does not cover it and smother the chick.

About twenty-four hours after the chicks are all hatched let them pick in hayseed for about two hours. The hayseed keeps the bowels open and gives the chicks an appetite. After this feed a little hard-boiled egg and ground oatmeal. The best thing to do is to keep the old hen and the chicks in a dry box for about a week until they are strong enough to be put outside, where it is dry.

The cheapest way to prepare food for young Bantams is to get a feed mill with which you can grind corn, wheat, oats, barley, rice, etc. Keep fresh water before them at all times, and if you can arrange it try and feed the mother hen before you feed the chicks, because if she is very hungry she will eat everything before the chicks get enough.

The most important thing in rearing Bantams is to keep them free from lice. Bantams can stand the cold better than lice. Therefore, examine your chicks at least once a week, because if you let them go any longer you will not have any Bantams to take care of in a short time. If they droop their wings or do not eat, treat them for lice even if you cannot find them.

After they are old enough to roost and the mother hen leaves them, the best thing to do is to separate the cockerels from the pullets, because if you do not do this the cockerels keep on tormenting the pullets, and sometimes do not come far from killing them.

The next thing to do is to cull your flock, and when the shows come on and you have been successful in rearing your flock and have the stock, then you will carry home the awards for your season's work.—Pigeons and Poultry.

THE NISEQUOGUE FANTAIL LOFTS, OWNED BY DR FRED'K C. PETERSON, SMITHTOWN, L. I.

BREEDING SHOW HOMERS.

By A. G. Burgess.

HAVING provided all necessary implements with the loft complete, attention must now be turned to the question of food. Old maple peas may be safely adopted as the staple food, with a constant variation of tares, wheat, dari, etc., as a means of creating an appetite. Hemp and canary-seed are useful as a delicacy and pick-me-up. Maize and an overabundance of dari must be avoided, for certain reasons, the former possessing fattening properties inclined to hinder the natural course of health. During the spring and summer give a supply of green meat. A lettuce hung up lengthways about 3 inches from ground will afford an excellent means of amusement, and at the same time provide a capital salad.

Another plan that has been much admired in supplying green food arose from a slight oversight in allowing a weed in an open flight to remain and thrive, soon to be joined by others. By giving a little assistance in planting here and there a few more weeds the ground in the flight was shortly converted into a miniature field, with grass growing to a considerable height. It was customary to place the bath in the run, and in sunny days the grass added considerably to the pleasure of bathing, being in itself a capital natural drying ground of a decided velvety touch, and a shelter for the birds from the hot rays of sunshine. The picture of a score of chequers and whole colors basking in the sun was so attractive as to force favorable admiration from even the non-admirer of "doos" who happened to be looking on. The many different attitudes of the birds, stretched as they were in the grass, huddled up close or lying with the one wing as a support and the other fully opened for the purpose of allowing the sun to penetrate into the underneath feathers and act as a delicious means of drying, displayed at their best the many sweetly-tinted feathers, blending in perfect harmony with the green grassy background.

The question of providing salt is rather divided. Since it is of so much value to human beings it may be taken for granted that its value applies equally to pigeons. I well remember a lump of rock salt being given to some birds that had never seen or tasted any, but immediately the lump was put to them they were found to be ravenously pecking it. The fact of the salt being eatable is evidently made known through a natural instinct, and the same applies to the properties of a mineral that is harmless to eat. Care, however, should be taken to prevent gorging with salt, as it would lead to disastrous results.

Grit.

The supply of grit should be given freely. Oyster shell and flint, broken up very small, is very serviceable for this purpose. It can now be purchased ready for immediate use from many firms, or a proper smasher will meet the same requirement. Since its use adds considerably to the amount of labor in providing necessities, the easiest method will be found in buying that already smashed for use.

Matters have now progressed so far as to allow the selection of stock to be put into practice, perhaps a somewhat difficult task to advise for the best when considering the different financial positions, some being able and willing to lay out an amount for one bird far and away larger than others intend doing for the whole purchase; but it will be policy to endeavor to deal with the subject in a way that provides for all concerned.

An interesting and profitable assistance in grasping the many points may be gained by visiting as many shows and fanciers' lofts as possible. With the former numerous valuable advantages will be offered. The only chance of seeing representatives of many fanciers' lofts is so afforded, and the opportunity also allows a comparison of productions favoring the adopted standard, and again provides an object lesson, set by the competent judges appointed to make selections of those possessing qualities that approach nearest to the accepted type.

Fix your mind upon the standard type and search round amongst the exhibits for those in possession of same. A close examination will be the means of a closer acquaintance with what is really required. The criticisms of those going the rounds of the pens can be considered and compared with the judge's work. The knowledge of the many important points so gained will, perhaps, have a more lasting impression than reading and learning off by heart the contents of a book. Not that I wish to infer the book reading bad policy—quite the reverse, it is of the highest value, and I should sincerely regret leading anyone to believe my intentions or references to be injurious to good writings on the Show Homer.

When the true type has been thoroughly established in mind, select the color most agreeable to your taste; for instance, a chequer may be looked upon as the ideal by one, while the whole color holds the preference with another. Having decided upon the color, make a selection of Show Homer men, whose career has been successful by honest means, and who are known to be honorable and trustworthy in their dealings. Such men are generally willing, and in many cases anxious, to assist the novice in every way. Numerous fanciers' initiations have been crowned with a gift pair from one whose principles aim high in leading beginners to the royal road of success, and although the pair was of only ordinary appearance, they were highly bred, and proved themselves capable of producing progeny whose creditable career in the show pen urged their proud owner to increase his lofts, ultimately holding a position in the Fancy equal to that of older established breeders.

In making the selection of fanciers from whom the stock is to be bought, carefully avoid including those who have been known to lower themselves to any one of the numberless practices of faking, or even go further still and do not allow a bird of their breeding to be amongst the purchases. Eventually a deal of that nature will prove a deception, appearing, as it does, as something that in reality it is not, and therefore creating a grievous disappointment. With what result? Dislike of the owner's birds from whom purchased, dissatisfaction with the breed, and arousing a tendency to suspect even those who adopt honest and straightforward principles and who can rightly claim to deserve credit in their endeavor to set a similar example to those whose practices and successes are evolved in a hotbed of deceit.

The present-day craze seems to be strength or substance, and in order to satisfy the desire many more important features have been neglected. In preference to so much strength, let me suggest quality. It appears to me to be the best means of maintaining the beautiful characteristics of the breed. Let us have quality before quantity any day. Correct formation of head is a point safely expected to be permanent, but can the same be said of qaulity? The life of quality with nine-tenths of present-day Show Homers is a miserable comparison with that of formation of head, and on these facts do I place the importance of its value in preference to other points possessing a likelihood inclined to a more extensive period of existence.

The U. S. H. Club standard of points as it now stands has no direct mention of this all-important point. The voice of rumor speaks of to-day's winning specimen as being anything but a production on the lines of the latest adopted standard. It also speaks and asks loudly for what I will call a "standard reform." But the aim of a large proportion of these reformers seems to favor the lengthening of the distance between the tip of beak to front of eye, combined with general substance of head.

Others are loud in their advocacy of allowing the size of body to be increased, which will naturally give support to a still further class who suggest the necessity of again enlarging the rings to allow comfort to the majority of present-day so-called pen-fillers.

Should the "standard reformers" carry their agitation to such an extent as to cause the adoption of a reformed standard, let me propose and specially urge that quality be included in the scale of points, and stand out prominently.

It will be of the highest importance to keep quality in mind when making the selection for stock. Some argue that for stock birds it is impossible to avoid coarseness if strength is desired, and wrong to pair two of good quality, on account of the inclination to throw fineness or birds lacking strength. It is equally possible to have quality and strength combined, as coarseness and strength. Once introduce coarseness, i. e., large wattle and cere, and long, ugly body, into the stock, a difficulty arises which will prove disheartening before many rounds of squabs are out, and will be a stubborn obstacle to remove entirely.

In studying the question of quality, I have particularly noticed those birds bred from a quality strain. I can call to mind, with pleasure, comparing five generations exhibited by a friend, each of which displayed so prominently the characteristic in question that it naturally caused unusual comment in most favorable terms. White eye, small cere and wattle, with cobby body, constitute the chief points relating to quality, and it needs but little encouragement to persuade the Fancy in acknowledging such to be the means of commanding a vast amount of attention from the generality of fanciers, together with high prices at auction. Well-set, stout beaks, good frontals and back skulls are much reduced in value without those points just referred to.

Deformities should at all costs be avoided. A short time back I was asked to pass an opinion as to the advisability of using a crossbeaked hen for stock. The quality and strength recommended her as being a useful addition to any loft, and the pedigree contained names of distinguished ancestors. Although the hen was given a trial, against my advice, the results with breeding were not highly satisfactory. To begin with, a delay in the first pair of eggs, compared with others mated at the same time; secondly, the young were principally fed by the cock bird, the hen being at a disadvantage with her crossed beak; and, lastly, the choicest of the two squabs developed a simliar beak, and became practically useless for stock or show.

It is possible to cure this affliction, but since it involves so great a liability to cause a variety of acute pains to the bird, more especially when performed by the raw novice, I will not advise attempting the operation. It is one that needs the greatest amount of patience, as it requires constant attention for several days, and must be done when the bird is young. To class this operation as faking would be a severe sentence upon the bird itself, hindering as it must the enjoyment of comfort in eating or in attending to the numerous duties which the beak is called upon to perform. I claim it to be a necessary surgical operation.

There are all sorts of other deformities, such as bumble-foot, wry neck, bow legs, drop wings, etc., etc. No matter how good the bird may be in other points, do not hesitate to throw on one side any tempting offer for purchasing such specimens. The endeavor to keep your lofts absolutely free from freaks when making the initial or additional selections is a matter offering few difficulties, easily overcome, since the market is so extensive, containing a large assortment of birds void of objections appertaining to this class.—*The Feathered World*

AKIN POULTRY YARDS, AKIN, N. Y., G. W. Lake, Prop. Young and old stock for sale in R. C. Buff, Brown and White Leghorns; also S. C. Brown Leghorns and Black Leghorns; White Wyandottes, Buff Rocks, White-Crested Black Polish. March and April hatched chicks; all prize-winning stock 143 firsts at the Montgomery Co. Fair 1906; Prices right. Akin, N. Y.

Best location in America for man or woman to raise poultry. Most delightful climate, never cold, markets all up and down Pacific Coast and Columbia River at highest prices; cheapest water transportation. Eggs 25 to 40 cents. Address Chamber of Commerce, Room 200, Astoria, Oregon.

RARE BREEDS AND POPULAR FOWLS and early chicks for the Fall fairs and early shows. I have them at a fair price, one bird or a hundred, or a complete show. I have won more prizes in competition in the largest shows than any breeder in America. Printed list free. W. A. Hoyt, Whitewater, Wis.

OUR LIGHT BRAHMAS AND WHITE Plymouth Rocks are birds of quality, bred on scientific principles, for exhibition and business and win at many of the leading shows. Stock and eggs for sale. East View Poultry Yards, box F, Ballston Spa, N. Y.

BUFF COCHINS, BUFF LEGHORNS, RED Pre'd Pouter Pigeons, Blue Silver and White Homers. I have bred the above varieties in the best of quality and have won at such shows as Newark, N. J.; Scranton,, Hazelton, Philadelphia and Reading, Pa. All stock sold on approval. W. N. Watson, Sunbury, Pa.

SICILIANS (BUTTERCUPS). A FEW OLD birds for sale now and young stock later. These fowls were originally imported from the Island of Sicily and are the greatest layers of the Mediterranean class. Next to laying, their chief characteristic is the peculiar crown-shaped comb. Harry Kauffman, Milton, Pa.

LIGHT BRAHMAS AND BLUE ANDALUSIANS are my specialties; bred to pay, to win and to weigh. Not to set, but to lay an egg every day. W. H. Wert, Ottawa, Ohio.

AMERICAN DOMINIQUES. — EVERY BREEDER of this matchless old Ametrican variety can obtain cockerels of purest blood this fall from Dr. W. H. Harwood, Chasm Falls, N. Y. My stock comes from men who have bred Dominiques fifty years—the best blood the country affords. No pullets for sale. I have also for sale a few elegant Silver Pencilled and Columbian Wyandotte and Light Brahma Bantam hens, cheap if taken at once.

FOR SALE — GOLDEN WYANDOTTES, THIRD COCKEREL, 2d and 4th pullets; Cleveland price $10, trio Black Orpingtons; one fine cockerel yearling, third prize Cleveland pullet, $6. Buff rock first prize Cleveland cock-
$5. One very fine R. C. R. I. Red yearling cock $6; third prize Buff Wyandotte cockerel, Cleveland $5; trio B. R. C. bantams silver cup winners, $5; trio silver seabrights winners, $5; trio Golden seabright, $3; trio Buff Cochins, $5; solid Buff trio Black Cochin, $3. Two pair Lt. Brahma Bantams, $5. These are all good stock and will sell any or all on approval or will exchange for good Buff Rocks. H. Beck, Ravenna, O.

PROFITS IN POULTRY KEEPING SOLVED.

Title of my new book, which is revolutionizing the poultry business all over the country. My great feed at 10c. per bushel, will save you $25.00 a year, on every 100 hens you feed, as well as increase your egg yield over 30 per cent. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1¼ to 1½ lbs. in seven weeks on it. No science required to feed my system. Are your pullets laying at four to five months old? If not, you have fed wrong. Failures impossible where my system is used. My second edition of 3,000 copies revised and enlarged now ready. Write to-day and stop that big feed bill.

Circulars and testimonials free.

* * *

"A certain childless woman moved to the suburbs and devoted herself to the raising of poultry. A witty friend went out to spend the day, and was shown a fine lot of young chickens.

"'These,' said the mistress of the place (a la Cornelia), 'these are my jewels.'

"'And I suppose some day you'll have them set,' responded the visitor quickly."

The Latest and Best Book on Success With Poultry is

999 QUESTIONS AND ANSWERS

By FRANK HECK

THE author claims and proves that this book contains information upon a greater variety of subjects than any book on poultry ever written. It has also drawn out more unsolicited testimonials from authorities and experts. The following are only a few of the hundreds received:

The book 999 Questions and Answers is the best of the kind I ever read. I never saw a book in the same class.—C. L. SMITH, Sec'y Minn. State Poultry Ass'n, Minneapolis, Minn.

The contents of the book takes the place of accumulated files of the various poultry papers and places the information desired in a handy and concise form.—C. G. HINDS, Pres. Amer. White P. Rock Club, Alameda, Cal.

It contains information for all classes and grades of poultry keepers, from judge to novice.—F. O. WELLCOME, Yarmouth, Me.

There are so many new things in the book and they are so nicely stated that I have taken pleasure in going through it. The unusual quality of the book is that it is full of information for the beginner and it also contains hundreds of things that will be valuable to those of the greatest experience.—T. F. McGREW, Washington, D. C.

The book surely fills a long felt want. Everyone who owns a fowl should also own this valuable book.—AUG. D. ARNOLD, Dillsburg, Pa.

The book will become a very valuable means of information for both old and new breeders, for which they can well afford to pay the price.—JUDGE I. K. FELCH, Natick, Mass.

It contains much of value to the average poultryman, and should meet with ready sale.—JUDGE W. S. RUSSELL, Ottumwa, Iowa.

It is a remarkable book to be the product of one man and I heartily congratulate you upon its production.—JAS. SHACKLETON, Milburn, N. J.

Best of all, it is thoroughly practical. I wish it could be placed in the hands of every poultry keeper in the country. If I could not get another copy I would not take $5 for mine.—EDGAR A. WARREN, author of "200 eggs per hen per year and how to get them," Hampton, N. H.

Why worry and wonder and grope in the dark? Why learn by expensive experience and disappointment when everything is offered you at so small a price? The knowledge gained by years of experience is contained in this book. The methods and secrets of the foremost successful breeders and exhibitors in the show room are given in full. The book is for

The American Fancier

VOL. XXVII NEW YORK CITY, SEPTEMBER 15, 1907 No. 687

A General Report of the New York State Fair

By W. C. DENNY, Judge.

Each year adds to the interest that the poultrymen, not alone of the Empire State, but of the adjourned States and Canada as well are taking in the annual exhibition of the New York State Fair, held each year the second week in September at Syracuse.

At the sixty-seventh annual exhibition, held September 9-14, was exhibited the best collection of poultry that has been found at this Show, where quality abounds. The actual number of entries was only slightly less than was the exhibit last year, which far exceeded any previous season. The difference, less than 200 birds, may be accounted for by the very unfavorable spring weather for hatching, which caused a lack of early chicks.

I cannot recall a season when the immaturity of the chicks was as marked as this year, not alone at Syracuse, but everywhere I have been. Breeders seem to have the usual number of chicks, but it is the exception to find any that have approached the maturity usually found at this season.

For unaccountable reasons the poultry department at Syracuse has not been accorded the hearty support that it deserves. Despite the liberal premiums, the unusual courtesy extended to all the efficient and capable management of exhibits by careful and experienced attendants under the genial John D. Jaquins, there has been an attempt to belittle what was being accomplished and to retard the progress of the Show. This has not kept the management from going ahead and offering inducements in the way of a first-class building, fitted throughout with Empire Coops, a liberal classification and most liberal cash prizes. To-day the poultry show of this great fair, as a whole, is without an equal in the fall fairs in America. It has outgrown the accommodations that three years ago were thought to be ample, and has been such a success in the way of an attraction that the management has promised a new building in the near future, with more than double the capacity of the building now being used.

Supt. Jaquin's plan of offering larger prizes on the more popular varieties is to be especially commended. Such classes as Plymouth Rocks, Wyandottes and Leghorns usually constitute more than 80 per cent. of the birds shown at fairs and poultry shows. Competition is always stronger and, for the added efforts in preparing exhibits the winners should receive more valuable prizes than those exhibitors whose varieties do not meet with such strong competition. The varieties from which the largest amounts in entry fees are received should strive for more valuable prizes. Supt. Jaquin's plan provides five prizes—1st, $3; 2d, $2; 3d, $1; 4th, H. C.; 5th, C., for single birds on such breeds as Plymouth Rocks, Wyandottes and other popular breeds, and two prizes, 1st $2; 2d, $1, on such varieties as Hamburgs, Polish, Games, Bantams, etc.

Everything was ready for the judges at 9 o'clock Tuesday morning, and with the exception of a few classes that were finished Wednesday morning the judging was completed and the ribbons up Tuesday afternoon. M. S. Gardner, B. Mosher, W. J. Stanton and W. C. Denny judged the poultry and pigeons. Clarence King placed the awards on waterfowl and turkeys.

Barred Rocks were of the usual quality found here which means the best. Very few birds did not require consideration. The winning pen of old and young, 1st cock, 1st and 2nd hen and 1st pullet were the best in the class. 5th cockerel was very immature, but promises to be a crackerjack later. Buff Rocks, a larger class than last year and of good quality. The cock bird, head of the winning pen, 1st cock and 1st cockerel were among the best birds. An unplaced cock, of a very light shade of lemon buff, was thought by the owner to have been worthy of a place, but I did not consider him for the reason that lemon buffs have had their day as winners in the show-room, and they have failed to prove of value in the breeding pen. Nothing is to be gained by breeding them with females of their own or a darker shade. The young stock comes either too light from the light females or the quality is too uneven from the darker or extreme mating. The standard calls for an even shade of *rich, golden* buff (italics are mine) and lemon buff is far from being rich. White Rocks are excellent class. The cockerel at head of the winning pen was easily the best bird of the variety I have seen this year, and was far in advance of the other males in the class. As a typical bird I consider him in advance of the Standard, his back and tail shape being free from a resemblance to Wyandotte type, and he was pure white throughout. Some very good Silver Penciled Plymouth Rocks were shown. A large exhibit of Silver Wyandottes faced the judge, and it was a difficult class to judge because of the wide range of type and color. Some of the best laced birds had to be set back for lack of shape. Columbian Wyandottes are certainly keeping up with their reputation as being a breed that is making rapid improvement. There were 61 birds shown. The 1st cock we have seen before as a winner at New York. The 1st hen had the best hackle I have seen on any Columbian female. The 1st cockerel was excellent in hackle and wing, had a fine head, was of good size and was very showy. It will take a good one to beat him. Some very good Golden Wyandottes were shown in a good-sized class. White Wyandottes about the same in numbers, but a better quality class than last year. It was a contest between Jonathan S. Martin of Port Dover Ont., who made a "killing" here last year by winning all six firsts, and Rock Hill Poultry Farm, Ossining, with Mr. Martin as the victor. In the pen classes the quality was very close, and Mr. Corey lost first on old through his changing his male birds in the second and fourth pens, the females in his second pen being easily the best four hens shown in the pen classes. Had they been shown in the open class would have been winners. Mr. Martin made a remarkable record on males, winning 1st, 2d, 3d, 4th 5th on cocks and cockerels. The winning cock was his famous "Regal," winner here last year and at Boston last winter. Buff Wyandottes very good, about the same in ADD JOB 268—GAL. 13—
numbers and quality as last year. In this class I found another cock of the same shade of lemon buff as the cock spoken of in the Buff Rock class, and did not place him for the same reason. There was quite a discussion by the owners of these birds and by judges and breeders who were present about leaving birds of this shade from the list of winners, and it was quite generally agreed that such birds could not win, any more than a pullet breeder of Barred Rocks could be expected to win the "blue" in a strong class.

Partridge and Silver Penciled Wyandottes neither as large nor as strong classes as last year. Not a great deal of interest seems to be shown in the old Dominique, and it is seldom that real Dominiques are seen, most all being rose-comb Plymouth Rocks, but at this show, F. G. Bean exhibited one of the best cockerels that we have seen for years. Rather young perhaps, but an excellent specimen. A large class of excellent Rhode Island Reds, both single and rose-comb, were shown. In single combs, honors were well divided between De Graff Poultry Farm and J. W. Schiebel, Jr., Duryea, Pa. Mr. Schiebel's 1st and 2d pullets were as good as anything we have seen in this variety. Full classes of Light and Dark Brahmas were shown. Buff Cochins and Partridge as well were behind what we usually find here.

Brown Leghorns about the same in numbers and quality as last year, the winning hens and pullets being very good. A great deal of interest is always taken in the White Leghorn class here, and this year was no exception. While there may have been a few birds less than last season, quality was unusually high, and a man would have been glad to possess any one of the winners. Black Leghorns seem to be quite the fashion, that is, if increased entries, quality and interest is an indication. One of the very best Leghorn males that has been shown was the 1st cockerel. I spoke of him in my remarks on the birds exhibited at Whitney's Point. Buff Leghorns a full class with some very good specimens. It has been several years since as many Black Minorcas were shown here as this year, and they were all good ones. Polish and Hamburg classes generally were filled and some of the winners were exceptionally good. We did not see as many good specimens among the Dorkings and Orpingtons as usual. Is it that the Orpingtons are not keeeping up with the wave of popularity on which they rolled a few seasons ago, and are they destined to be classed with the Dorkings in popularity ?

"Jimmie" Glasgow was on hand looking after Havemeyer Bros.' Game Bantams. Arthur Schilling was looking after a large exhibit he had made in the Black and Buff Cochin Bantam classes. Mosher Bros. had an exhibit of Japanese, and George Hillson sent some of his Light Brahmas. A mention of these names as exhibitors assures all that the quality of Bantams shown at Syracuse was unusually high.

[Editor, we regret that the package from our representative at Syracuse containing complete list of awards has been lost in the mails. This issue has been delayed a few days, hoping that the package would turn up.

October 1st issue will contain the complete Syracuse awards. List of pigeon awards will be found in the pigeon section of this issue.]

POULTRY AWARDS.

One hundred and twenty-nine exhibitors entered six thousand birds at the State Fair, Syracuse:

American—Pen of barred plymouth rocks, old: First, Jonas Hayner; second, Pine Top Poultry Farm, Hartwood; third, W. E. Gilbert. Pen of barred plymouth rocks, young: First, Jonas Hayner, Livingston; second, Pine Top Poultry Farm, Hartwood; third, L. J. Bundy & Son.

Buff plymouth rock, cockerel: First and second, C. W. Everitt; third, Edgewood Farm. Buff plymouth rock, pullet: First, Nelson Brusie; second, Edgewood Farm; third, C. W. Everitt.

Pen of white plymouth rocks, old: First, Harrington & Clark; second and third, Rock Hill Poultry Farm. Pen of white plymouth rocks, young: First, Rock Hill Poultry Farm; second, Morris & Hall; third, Henry Herder. White plymouth rock, cock: First, Harrington & Clark; second and third, Rock Hill Poultry Farm. White plymouth rock, hen: First Rock Hill Poultry Farm; second, Harrington & Clark; third, Rock Hill Poultry Farm. White plymouth rock, cockerel: First and second, Rock Hill Poultry Farm; third, Morris & Hall. White plymouth rock, pullet: First and second, Rock Hill Poultry Farm; third, F. G. Bean. Pen of silver penciled plymouth rocks, old: First, Rock Hill Poultry Farm, the same firm winning all prizes in all other classes of this strain.

Pen of silver wyandottes, old: First and second, Le Roy, Seigfred; third, F. B. Mitchell. Pen of silver wyandottes, young: First, F. B. Mitchell, Pittsford; second and third, Le Roy Seigfred. Silver wyandotte, cock: First and second, Le Roy Seigfred; third, E. H. Morris. Silver wyandotte, hen: First, Le Roy Seigfred; second, F. B. Mitchell; third, Ira L. Letts. Silver wyandotte, cockerel: First, E. H. Morris; second and third, F. B. Mitchell. Silver wyandottes, pullet: First, F. B. Mitchell; second, E. H. Morris; third, F. G. Bean.

Columbian Wyandottes—Pen, old: First, M. S. Gooding; second, F. G. Bean; young: First, J. F. Van Alstyne; second, A. L. Jenks; third, Rock Hill Poultry Farm. Cock: First, J. F. Van Alstyne; second, L. L. Bright; third, F. G. Bean. Hen: First, J. F. Van Alstyne; second, L. L. Bright; third, F. G. Bean. Cockerel: First and second, J. F. Van Alstyne; third, Rock Hill Poultry Farm. Pullet: First, J. Frank Van Alstyne; second, L. L. Bright; third, F. G. Bean.

Golden Wyandottes—Pen, old: First, Ira Sitterly; second, E. H. Morris; third, F. G. Bean, Collegeville, Pa. Pen, young; First, Ira Sitterly. Cock: First, F. B. Mitchell; second, E. H. Morris; third, George Burn. Hen: First, E. H. Morris; second, F. G. Bean; third, G. Archie Turner. Cockerel: First, Ira

Sitterly; second, F. G. Bean. Pullet: First, Ira Sitterly; second, F. G. Bean.

White Wyandottes—Pen,old: First and third, J. S. Martin; second, Rock Hill Poultry Farm. Pen, young; First and third, J. S. Martin; second, Rock Hill Poultry Farm. Cock: First and third, J. S. Martin; second, Dr. Charles L. Alvord. Hen: First and third, J. S. Martin; second, Rock Hill Poultry Farm. Cockerel: All three prizes, J. S. Martin. Pullet: First, Rock Hill Poultry Farm; second and third, J. S. Martin.

Buff Wyandottes—Pen, old: First and second, R. B. Robbins; third, E. H. Morris. Pen, young: First and second, R. B. Robbins. Cock: First and third, R. B. Robbins; second, G. A. Turner. Hen: First and second, R. B. Robbins; third, J. R. Clancy. Cockerel: All three prizes, R. B. Robbins. Pullet: First and second, R. B. Robbins; third, J. R. Clancy.

Rhode Island Reds—Pen, old: First and second, De Graff Poultry Farm; third, George Van der Veer. Pen, young: First, J. W. Schiebel, Jr., Duryea, Pa.; second, George W. Tracey; third, F. B. Mitchell. Cock: First, J. W. Schiebel, Jr.; Duryea; second, G. W. Tracey; third, De Graff Poultry Farm. Hen: First, G. W. Tracey; second and third, De Graff Poultry Farm. Cockerel: First, De Graff Poultry Farm; second, G. W. Tracey; third, Thomas J. Davis. Pullet: First and second, J. W. Schiebel, Jr.; third, Thomas J. Davis. Rose comb Rhode Island reds. Pen, old: First, G. W. Tracey; second, De Graff Poultry Farm; third, Hugo Freese, Rochester. Pen, young: First, H. E. Cheesebrough; second, H. H. Wallace; third, De Graff Poultry Farm. Cock: First and second, Hugo Freese; third, George Van der Veer. Hen: First, George Van der Veer; second, J. W. Schiebel. Cockerel: First, Hugo Freese; second, Henry Cheesebrough; third, Hugh H. Wallace. Pullet: First, Hugh Wallace; second, George Van der Veer; third, Henry Cheesebrough.

CAMBRIDGE, N. Y., SEPT. 2-6.

The entries at the great Cambridge Valley Fair, held at Cambridge, N. Y., Sept. 2-6, were not as large at in previous years, owing to the fact that the association promised to erect a building this year for the accommodation of the valuable birds, which always are conspicuous at this great fair. And we, as fanciers, hope before another year rolls around that the association will see their way clear and give us a building which will be an honor to the association and a pleasure for the fanciers to show their birds in.

Mr. John D. Jaquns of Watervleit and Mr. R. Mosley of Eagle Bridge, N. Y., officiated in placing the awards, and their judgment was very commendable.

The White Wyandotte class was one of the largest—as always is the case—and had specimens worthy of praise. Next came the White Plymouths; as to number, there were equally as many and the class contained some very fine birds, especially first ck. and cockerel.

Barred P. Rocks were not so numerous as previous years, but quality was good.

S. C. W. Leghorn class was well filled, but not quite as good in quality as I have seen, with the exception of first cockerel, which was a credit to the fancier who bred and owned him.

The Buff Leghorn class were all good, especially the Single Combs.

As time and space will not permit to make further comments on each class, would say they were all good, as to quality, and we hope that before the gates of the great Cambridge Valley Fair is opened for 1908 the association will build a commodious building, and receive the largest and best display of poultry they ever had.

AWARDS.

LIGHT BRAHMAS—Ck. 1, hen 1, J. F. Snow; ck. 2, hen 2-3, ckl. 1, pull. 1, Earl Wilson.

DARK BRAHMAS—All to J. F. Snow.

BUFF COCHINS—Ck. 1, hen 1, ckl. 2, pull. 2, Earl Wilson; ckl. 1, pull. 1, Geo. Burns.

PARTRIDGE COCHINS—Ck. 1, hen 1, ckl. 1, pull. 1, pen (old) 1, pen (young) 1, J. F. Snow; ck. 2, hen 3, ckl. 2, pull. 2, Geo. Burns; hen 2, Lauderdale Farm.

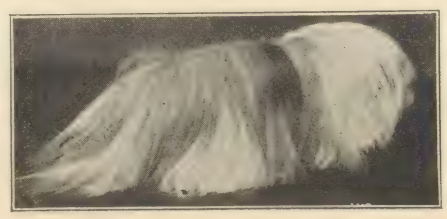
BISHOPS—All to J. F. Snow.

CRESTED BISHOPS—All to J. F. Snow.



COLORED SEBASTOPOL—All to J. F. Snow.

BUFF SEBASTOPOL—All to J. F. Snow.

Wellsville, N. Y., Show.

GEORGE W. WEBB.

The Poultry Show, held in connection with the Wellsville Fair was a success in every way and proved to be one of the best drawing cards on the grounds. The mammoth tent held 2,500 birds and judging from the quality in many of the classes, Wellsville people know how to breed fine Poultry as well as fine horses, and that is going some. The birds were in excellent condition for this season of the year, many of the old ones in fit Winter condition. The young stock showed the benefit of early hatching. The American classes made a fine showing with Wyandottes in the lead, the silver being the banner class. Buffs also held their own with classes all filled. Whites a little shy in numbers but some good ones in the money. Barred Rocks showed a full entry, first Cock a corker for barring, also fine Rock shape, rest of class ordinary with exception of first hen, a good one. In the Mediterranean classes the White Leghorns took the lead both in numbers and quality, first Pullet a star, Browns fair, Buffs not in it with the other colors, and Minorcas a good class in blacks. Games and Game Bantams the quality was gilt edge. It was simply Madison Square quality at a fall fair. Wonder where they all came from? The winning Buff and Black Cochin bantam hens were certainly a pair of wonders both in shape, color and feathering and can stand competition at New York. The Pigeon Exhibit was one you don't often see at a fair, there being five exhibitors competing for best display showing as clean a lot of birds as it has been our pleasure to handle in some time. When lookng at this grand display of Poultry and noticing the interest manifested on the part of the visitors, it occurred to us that Wellsville should afford a building suitable for such a grand display of Poultry.

Poultry at Wellsville, N. Y.

One of the big attractions at the fair this week has been the poultry show. More than 2,000 birds and pet stock were shown in the big tent. Superintendent A. S. Stillman of Alfred, and his assistant, George B. Jones, of Wellsville, took good care of the exhibitors.

Armburst Bros. were probably the biggest winners. With over 200 entries they captured $226.50 in prize money.

Archie Turner of the Pleasant View Farm had the largest and best exhibit, over 500 birds, many of them, however, in pens. His winnings were $210.

Will Jennings of Orchard Bank Farm captured $80 in prizes from his string. He also cared for the exhibit of Will Smith, which included a very fine showing of guiana pigs. Smith's winnings amounted to $185.

J. W. Flint showed 145 birds including a better collection of water fowl than is usually seen at any fair. Mr. Flint got his share of prizes, both on his poultry, as well as his sheep.

Edwin H. Bentley made a hundred entries of poultry and pet stock and his winnings of some $60 proved his exhibit to be first class.

George B. Jones showed a fine string of Wyandottes and captured six firsts and eight seconds.

Worcester, Mass.

The Poultry Exhibition at Worcester, Sept. 2 to 4. Not as many entries as last year.

IN PAIRS.

PLYMOUTH ROCKS—White, 1-2 Hervey, 3 Morgan; chicks 1 Hervey, 2 Morgan. Buff, 1 Chapin, 2 Andrews; chicks 1 Andrews. Barred, 1-2 Ballou, 3 Lambert's Poultry Farm; chicks 1-3 Lambert's P F, 2 Ballou.

BRAHMAS—Light, 1 Richardson, 2 Chapin; chicks 1 Chapin, 2 Richardson. Dark, 1 Ballou, 2 Richardson, 3 Andrews; chicks 1 Shurtleff, 2 Andrews.

COCHINS—Buff, 1 chicks 1 Davidson. Partridge, fowl 1 Wood & Freeman, 2 Richardson; chicks 1 Wood & Freeman, 2 Hammond. White, fowls 1 Richardson, 2 Carter; chicks 1 Richardson. Black, fowls 1, chicks 1, Richardson.

WYANDOTTES—Silver, 1-2 Wood & Freeman, 3 Williams; chicks 1-2 Wood & Freeman, 3 Williams. Golden, 1-2 Wood & Freeman, 3 Richardson; chicks 1-2 Wood & Freeman. White, fowls 1 Chapin, 2 Brown; chicks 1-2 LaRue, 3 Brown. Buff, 1 Wood & Freeman, 2 Chapin; chicks 1 Chapin, 2 Wood & Freeman. Black, 1, chicks 1, Wood & Freeman. Partridge, 1-2 M. H. Coffin, 3 W. D. Ross; chicks 1-2 Coffin, 3 Ross.

ORPINGTONS—Buff, 1 Backett, 2 Howland: chicks 1 Wood & Freeman, 2 Brackett, 3 Howland.

LEGHORNS—S. C. White, 1, chicks 1, Chapin. Brown, 1 Chapin, 2 England; chicks 1 Chapin, 2 Rich. Buff, 1 Wood & Freeman, 2 Chapin; chicks 1 Chapin.

MINORCAS—Black, 1 Richardson, 2 Allen, 3 Moore.

GAME BANTAMS—Black red, 1, and chicks 1, Felton. Brown red, 1 Wheeler. Golden duckwing, silver duckwing, 1 on each Wheeler.

BANTAMS—Buff cochin, 1 Richardson, 2 Wheeler, 3 Thayer; chicks 1 Richardson, 2 Thayer. Partridge, 1 Wheeler. White, 1 Wheeler, 2 Lowe, 3 Chapin.

GEESE—Toulouse, 1 Lambert's Poultry Farm, Embden 1, African 1, Bigelow. Brown china, 1 Putnam, 2 Allen.

DUCKS—Pekin, 1 Wheeler, 2-3 Morgan. Gray and White, 1 Wheeler.

The York County Fanciers' Association will hold its third annual exhibition at Dallastown, Pa., November 25 to 30, 1907. Jacob Eberly, Secretary.

* * *

Perkiomen Valley Poultry Association at East Greenville, Pa., Dec. 24-28, 1907. George W. Webb and W. Theo. Whittman, judges.

James A. Tucker will judge at Western Wisconsin Poultry Association, La Cross, December 11 to 16. E. H. Hoffman, Secretary.

* * *

December 2 to 6 are the dates for the Springfield, Mass., Poultry Show. The following judges will do the scoring: George H. Northrup, C. Tuttle, W. B. Atherton, J. H. Drevenstedt, C. A. Ballou and J. Fred. Grangle. The officers of the associations are: H. C. Page, president; Dr. I. Clark Hill and John Aldrich, vice-presidents; H. W. Myrick, secretary, Longmeadow, Mass., and F. W. Havens, treasurer.

* * *

D. E. Hale will judge at Forest City Show, Iowa, Jan. 6 to 9.

BIRDS AT MOULTING TIME.

C. W. Fowler,

Much has been written about how to manage the birds at moulting time. Many ideas have been advanced, and some which did not work out in practice. One—the so-called starving method—was to put the hens on half or one-fourth ration for two or three weeks, reducing them in flesh, and then, by feeding heavily, force them to moult quickly. This plan may work satisfactorily on some flocks, but I tried it one season to my entire satisfaction. The birds were thrown out of condition by the sudden checking of their feed and then again by the increase in feed, and I had the poorest success in getting them through in shape that I have ever had in all my years of experience in breeding. I had several fine show birds that never finished moulting and carried some of their old feathers all winter.

All my yards are now made with gates opening out on free range, and after the breeding season is over all the birds are turned out on a large orchard range sown to alfalfa, oats, white clover, etc., but are not starved to death because they have a good range. They are fed liberally on the very best that money can buy. I do not mean the most costly feed, but pure and sound. I find that good, sound wheat is about the best thing I can find to feed birds during moult, if they have a good, free range, and have brought them through the moult in fine condition on wheat exclusively. By the way—I have never heard of it hurting them at any time.

Sometimes I feed them during moult on a mixture of ground feed consisting of equal parts of wheat bran, shorts and corn meal. I keep this before the birds all the time I am feeding it, and they can help themselves. This is a good way when grain cannot be easily gotten, but I prefer the grain, especially wheat, to anything I have ever tried. We hear a good deal about overfeeding, but I never thought I hurt the birds during moult, no matter how much I feed. They always go through in fine shape, are ready for the early fall shows and shell out the eggs in winter when they are high. This plan may not suit every one, but it has worked well for me.

* * *

Moulting is a natural process for poultry, but it entails considerable strain upon a bird's vigor and constitution, and the manner in which a fowl gets through it depends very much upon the condition at the time the moult commences. The forced moult is the most trying, because it is unnatural. The bird is reduced in condition by being suddenly deprived of a portion of its regular food; it is generally shut up in a hot building with little or no exercise, and its general health naturally suffers considerably as the result of such treatment. Soon the feathers begin to fall and the new crop commences to grow. Now, this is the dangerous time. The bird's health has already been shattered, and on top of it all comes the severe additional strain entailed by the growth of a new set of feathers. The bird has very little reserve energy to meet this strain, and unless one is careful there may be a thorough collapse, or the bird may be so reduced in health and vigor that it can never again be relied upon as a breeder of hardy stock. If it is necessary to force birds into moult, as in some cases it is, they should still have nourishing and sustaining food, though in reduced quantities. Moreover, as soon as the old feathers begin to fall a generous course of feeding should be commenced, in order to meet the growth of new feathers. We (says a writer in Hobbies) recommend ground oats for soft food, with wheat, oats, peas, beans and hemp-seed as hard corn. In addition, there should be a daily supply of fresh green bone and cooked meat, whilst a little iron tonic in the drinking water is very beneficial. We have also found prepared tonics, sold by medicine dealers, very useful in getting birds round. Give the birds plenty, but not excess, and provide plenty of exercise and green food.

Much trouble may be caused by a bird hanging over the moult. Very often it is because it is too well fed, and its condition is not such as to enable it to cast its feathers freely. A dose of Epsom salts will do good, and if the bird is fat the food should be reduced until it begins to cast its feathers. Sometimes a bird is unable to cast its feathers, though they may be pulled out freely. This is more often the result of weakness, and a tonic is desirable in such cases.

The older a bird gets the more trying, as a rule, does the moult become, though many strong and vigorous birds make light of it. It is better to let an old bird moult naturally than to force it, and one must see that it is neither too fat nor too poor if it is to get through it easily.

* * *

Early Moulting Desirable.

Good yearling hens that have moulted early are likely layers. The problem, how to get hens to moult early, is not entirely solved yet. No doubt it has been noticed that hens which set and bring out a brood of chicks from June 10th to July usually moult about the time they are leaving their chicks. Some hens that sit earlier also moult early; but, as a rule, they begin to lay after sitting, and are rather inclined to late moulting. From the above, it would appear that the best method to get the flock in general to moult would be to place the flock under conditions similar to those of the sitting hen. This is done by some egg farmers with more or less success. The plan followed is to change the hens to a new, free range about July 1st, and feed but very lightly, not more than one handful of grain to each hen daily. The object is to induce the hens to dine largely on grass and water, and to stop egg production. After being thus treated for from two to three weeks the hens are again well fed on a good laying ration. In many cases they begin to moult, and if fed well, get their new coat of feathers in quickly, and thereby save time. I have had a few hens which have begun to lay heavily as soon as I have started to feed them well, but this is not very often the case. —W. R. Graham, Ontario Experiment Station.

* * *

Messrs. Nichols, Graves and Bunnell will judge at Middletown, Conn., Jan. 7 to 10, 1907, Arthur L. Clark, sec'y.

* * *

W. Theo. Wittman will judge the poultry and L. G. Plath the Pet stock at the coming York City Poultry, Pigeon and Pet Stock Show, to be held Nov. 18 to 23, 1907.

* * *

"WHITE DIARRHEA" IN INCUBATOR CHICKS.

By Henry R. Ingalls.

ARTIFICIAL hatching according to theory and the Incubator Catalog is as successful as the natural method but when we get right down to practice and facts we find that it is not just what it is cracked up to be. I know that a large part of the poultry grown now-a-days is incubator hatched and brooder raised but if we could learn just how many eggs it takes to make one mature fowl, so to speak, we would be more than astonished, we would be astounded. Just look over your own experience and try to figure out how many chicks, dead in the shell, you have taken from the incubators, then, if you can think of it, make an estimate of the number of chicks you have had die in the first two weeks of their lives. In the catalogs and poultry papers we read how easy it is to hatch and raise chickens, it is a snap, but when you try it you find it something different.

There is one great scourge which carries off literally thousands of chicks every year, it is "White Diarrhea" or "Bowel Trouble" as some call it. There is a bowel trouble of young chicks that may be caused by filth, poor food, improper feeding or something of that sort but the genuine White Diarrhea is altogether a different thing. There is absolutely no cure for it. I can tell by the looks of the chicks when they come from the machine whether they will live or not, quite often they show this fatal trouble while yet in the incubator. I ran up against this trouble early in my experience and I thought something was wrong in my management and I did all I could to correct it but the more I did the worse it got. I used the best machine, fed the best foods and was up-to-date but I lost chicks just the same. I experimented, ran my incubators under different conditions, at various temperatures and methods of ventilation but it made no difference. I put the incubator chicks with hens and lost them just the same. I did not loose hen hatched chicks though. I wrote the man who made my machines and he said "your chicks get chilled." I knew they did not get chilled for I was absolutely sure they could not get chilled after I took them from the incubator. I convinced myself that this condition came from the incubator with the chicks. I now believe the incubator man was right, they were chilled, in ninety cases out of a hundred when chicks die of this trouble they have been chilled, but how?

I bought and used a "pedigree tray" and every chick I ever hatched in it died, never raised a single one, all died of "White Diarrhea." I pondered long on this problem and could make nothing of it at the time but now I know what was wrong. I threw these trays away. I worked like a beaver to try to discover some clue as to what was wrong, I knew there was an unnatural condition somewhere but I could not find it until one cold night in a certain February, I had an incubator hatching that day and before retiring for the night I went into the room where the incubator was to see how the chicks were coming on and on looking into the machine I saw the chicks piled up in a heap, on the bottom of the nursery, just like chicks do when they are cold. I wondered if they could be too cool. I put those chicks into a brooder and in three days every one was dead of " White Diarrhea." I put several thermoneters in the nursery of that incubator, and with a temperature of 103 degrees on the trays the nursery showed tempertatures of from 84 to 93 degrees.

I had begun to see a light. I put in another hatch and at hatching time I fixed it so they could not get down into the nursery at all. I put these chickens in the same brooder and subjected them to a variation of temperature of from 80 to 110 degrees and they had no white diarrhea at all. After this we made several hatches, kept them all out of the nursery and had fine success in raising them.

Now some will say there is nothing to this, that the exposure spoken of is too slight, but when we come to look into it closely we will find that it is an unnatural condition. Did you ever notice how at hatching time your incubator thermometer would be registering 105, as you wanted it, as the chicks were pipping the shells and soon after, or when they are coming out real lively you look at your thermometer and it registers 98 or 100? Do you know what is wrong? A bunch of chicks just out of the shell, all wet, are clustering around the bulb of the thermometer, these wet chicks are that much cooler than the air of the egg chamber. Suppose these wet chicks fall into the nursery with its temperature ten degrees lower than it is up on the egg trays, what effect will it have on them? It is an unnatural condition, and as such it is harmful to say the least, and in my opinion it is positively deadly. Under the hen the chick comes out of the shell and remains quiet for twenty-four hours and is in the hatching temperature all of the time. Is this any different from the way it is done in the incubator? It certainly looks that way

My experience and my experiments with incubators and brooders extends over a period of quite a number of years and I have had some very good success, but as a rule there is far too much loss connected with their use. The most of the loss, however, has come from this white diarrhea and if that can be overcome artificial hatching and rearing will be much more pleasant and profitable. In the light of my experience I would suggest to those who have losses from this trouble that they test their incubators to see what the temperature of the nursery is and at hatching time keep the chicks up on the trays until they are twenty-four hours old, at least, and when removing them to the brooder take great care that they are not exposed to the cold air, have a hover temperature of at least 100 degrees and keep them close to the heat for at least five days, they must not be allowed to get a bit chilled or exposed in any way before they are a week old. Thousands of chicks are killed because their owners let them get too much exposure. Do not forget that when a chick leaves the shell his circulation is defective and his powers of resistance are very slight indeed, and any little thing is liable to affect him and derange his very frail vital organs and the result is a dead chick.

This white diarrhea is not a disease at all, but is something that is caused by some unnatural condition during incubation or, as I have pointed out, just after the chick leaves the shell, and here is where we must look for it. I truly believe that in many cases it is caused by the wet chick dropping down from the egg trays into the nursery which is ten or more degrees colder. Can we not have some experiments along this line by qualified investigators? I fail to see that our experiment stations are doing anything at all to help solve this, the greatest problem of poultry keeping.

* * *

The digestive system of all birds requires a certain amount of coarse gravel or grit for use in the gizzard. On a good run they will find enough for themselves lying about, and need no more. In close confinement it must be provided, but should not be forced upon them, as some do, by mixing in the food. Coarse gravel is the best, but not always obtainable, and "flint-grit," or flint broken small, is largely sold and bought for the purpose.

The first and second Silver Wyandottes at the last New York and Boston Shows appear to be causing considerable comment by Wyandotte breeders in general.

In recent articles appearing in both the Reliable Poultry Journal and the American Fanceir the shape and type of these birds have been criticised.

The September issue of the Feather mentions the winning hen at Boston and says: "She could not be classed as an ideal for shape."

In the September 1st issue of the American Fancier we published the photo of the hen, also an article by her owner. Mr. Samson's letter in other columns of this issue is a reply.

* * *

Rhode Island Reds appear to be gaining very rapidly favor with that vast army looking for a general utility fowl. In some of the rural sections one can drive for miles, passing hundreds of farms, all stocked with Rhode Island Reds. The stock was generally started by one farmer who had purchased a setting from some breeder, found them satisfactory to his wants, and so the breed increased.

They are considered a good laying variety and, for table use are far superior to many varieties. The standard calls for cocks and cockerels at about 7½ to 8½ pounds; hens and pullets, 5 to 6½ pounds.

* * *

We understand the Short Hills Poultry Farm, which made such a sensational win in Game Bantam Alley at the last New York show, have made arrangements to have Mr. Percy Furness, the well-known English bantam breeder, take an active part in the management of the Short Hills Farm.

Mr. Furness expects to leave England shortly for America, where with Messrs. Fincke and Thornton he will continue to breed bantams.

* * *

Every resident of a large city will admit that fresh eggs are not easily obtained, even when the market is stocked well. True, eggs are sold as fresh, but doubts are always strong on the part of the purchaser. It is only when it is too late that the buyer finds out his mistake, and, as a rule, he is always willing to pay a larger sum for eggs that he knows to be fresh and are delivered to him direct from the yards. In order to procure double prices let your customers never receive an egg over one day old. Secure their confidence, and deliver them in person. Invite them to visit your farm, and give them every opportunity to know all about your methods. Hide nothing, and never allow a stale egg to come on your place. When once you have the confidence of your customers they will pay a very large price before they will part with you.

* * *

Do not try to raise lice and fowl in the same coop. For the lice will increase, while the fowl decrease.

* * *

At Charlotte, N. C., Poultry Association, H. P. Schwab will officiate in placing the awards.

August 25, 1907.

American Fancier, New York.

Dear Mr. Lott: Allow me to congratulate you on the fine appearance of the Fancier. I just love that old paper and I hope that you will never allow it to miss an issue.

One gets so accustomed to a certain paper after reading it for years, that when a month rolls by without seeing it he feels as if he had lost something. That is the way I have felt since the American Fancier failed to show up. I have read the old Fancier nearly since its inception and I was exceedingly glad to see it once more on my desk. Somehow the Fancier seems to fill a place that no other paper can take. It comes to us with the announcement of always giving a full list of awards of all shows that it reports. Some papers only publish the reports of the winnings of their advertisers. This may look like a good business policy on their part, but as far as I am concerned, I hate to see it. As an advertiser, I would much prefer that the whole report of a show went in than to just have my awards printed. If the other fellow wins the "first," I would prefer that his name be given. It looks like that my birds were not good enough to win a "first" prize and that I was only awarded the "seconds." If the winner of the first prizes were given it would show that my birds were good but that I was in "hot" competition. On the other hand, if I take the first prizes and the other fellow's name in the class not given, it looks like I had no competition. Where a paper pretends to make a report of a show, they should give the whole thing or nothing.

The fall fairs are about on us here in the Northwest and judging from the big money prizes offered, they will be larger and better than ever before. The circuit opens this fall at Everett, Wash., September 4, and is followed by the State Fair of Oregon, September 16 to 21; the next week brings the Washington State Fair, at North Yakima, September 23 to 28, in turn followed by Spokane, September 30 to October 5. The fair season winds up with Boise, Idaho, October 21 to 26th.

The Washington State Fair has hired James A. Tucker to place the awards this season. Mr. Tucker has never been on the coast, but judging from the many complimentary notices that he is getting back in the Middle West, he is good enough to go anywhere.

The Alaska-Yukon Fair, to be held in Seattle in 1909, is going to be the largest thing ever attempted out "West." You fellows who claim to have the "best that is" should get your coops ready and come out. There will be nothing too good for you if you will make up your mind to visit us. We are going to have a fair that you will always remember. The people of Seattle have raised $600,000 and the State of Washington has given the large sum of $1,000,000. This money will be used as permanent buildings for our university. That is, the buildings will be erected in time to be used for the fair and then will be turned over to the State University. You readers back East who have never visited the coast can't afford to miss this big fair. We have given $100,000 for a live stock exhibit and you can "bet your life" that the chicken men will come in for their share. We hope to be able to announce the best prize ever offered by a poultry show and we are going to have the best judges of poultry that America affords. We are not going to give judges jobs for sake of giving them reputations like some of the big Eastern shows are now doing, but the judges for this fair must bring their reputations with them.

James L. Anderson, Seattle, is the superintendent of poultry for the fair proper. I hold my appointment from the Washington-Alaska-Yukon Fair Commission.

If the editor can find room, I will write you a few notes about our fall fairs and winter shows.

Yours truly,
HARRY H. COLLIER,
Tacoma, Wash.

* * *

Paderewski, the noted pianist, is going to devote a large part of his leisure time to poultry. Breeders should not quote a price for their fowl anywhere near as high to this noted pianist as we had to pay for admission to the hall where he was playing.

* * *

During last fall and winter there were about 600 shows held at which poultry was exhibited. We trust the coming season will see a great increase over this number.

* * *

A few steps further on Success stands still and waits for every man. But if the man stands still he will never reach Success.

* * *

The most effective way to stop hens from eating eggs is the hatchet. It is almost impossible to correct the habit in any other manner. Sometimes the placing of red pepper in the egg through a small hole in the end will stop the habit.

* * *

Fowls utilize oyster shells and other forms of lime largely as grit, while fresh bone from the butcher is an excellent food, providing both lime and nitrogen. As green bone cannot be ground, owing to its tough condition, it must be cut with a bone cutter. When bones are dry they may then be ground.

* * *

The Meriden Poultry, Pigeon and Pet Stock Association will hold their annual exhibition at Meriden, Conn., December 31 to January 3, 1908.

The first meeting was held September 4 and had a large attendance.

The committee on prizes reported they had received eight silver cups, ranging in price from $10 to $30 each and expect to obtain quite a few more before their premium list goes into print.

Frank Hubbard, Joshua Shute and George Currier were appointed a committee on printing. Charles A. Kaschube was elected superintendent. The outlook is very favorable for a grand display of both poultry and pigeons.

* * *

The Philadelphia Poultry, Pigeon and Pet Stock Association will hold their show from January 28 to February 1. Leslie Jefferis, Secretary, Bridgeport, Pa.

* * *

Sept. 9, 1907.

Leonard W. Lott & Co.,
New York City.

Gentlemen: I am glad to see the Fancier in the field again as it is the fanciers' foremost paper. In fact, I don't see how the Poultry fancier can get along without it, as its criticisms of the different birds at shows is a good educator. Wishing you every success, I am respectfully,

LESLIE JEFFERIS.
Secretary, The Philadelphia Poultry, Pigeon and Pet Stock Association.

* * *

The Bushnell Poultry and Pet Stock Association will hold its initial show December 23 to 28. Ira C. Keller, Judge. M. W. Grigg, Secretary.

W. E. SAMSON'S REPLY.

Forest City, Pa.

Editor American Fancier:

The A. F. reached us this date and one of the first things to meet our eye was the letter of Mr. Edwin H. Morris, and after reading it over the second time have decided to reply.

We wish to say we did not wish to point out the shape of his birds above all others as much as we did wish to impress upon the minds of breeders that the first thing we must consider is shape. And we feel that we truthfully gave all the credit due, and when we make this statement we voice the sentiment of at least three-fourths of every Silver breeder that saw the Silvers at the late New York show. Not only have we this from them by heart to heart talk but by letter, and if the half tone shown on the same page as Mr. Morris's letter is the one the writer saw and looked at by the hour (well, hardly that long) we must say we never saw her assume that attitude in all the time we studied her, and it was remarked by more than one "What a pity that a bird with such lacing should carry such symmetry."

We wish to repeat "shape makes the breed," and seeing the judgment passed on some of the birds at different shows caused us to write on shape. Mr. Morris speaks with a great deal of confidence when he says: "I will show a Cock, Hen, Ckl. and Pullet against him for anything he cares to name." This is the same spirit, we understand, he showed before the last New York show when he offered to bet quite a sum of money he would win first and second on Pullets. Just think the matter over. Why should a man be so confident that he would wager money that he would win first and second? The writer is not a man with a large pocket-book and the present prices keep him from making as many entries as he would make at Madison Square Garden. We entered no pullets in competition at New York with Mr. Morris, but did hens and at Scranton showed Pullets with him, we winning first and second. We wish to say in conclusion that the writer breeds his winners.

We also wish to say to the credit of Mr. Morris's Pullets that she was one of the best laced Pullets, if not the best on body the writer ever saw in his years of experience of breeding and showing and was the true Black and White. Now, Bro. M., get shape the hock and thigh lacing to correspond with the body lacing and you have the world beat.

W. E. SAMSON,
Of the firm of Samson & Alden.
Forest City, Pa., Sept. 3, 1907.

* * *

The third annual show of the Holyoke Poultry and Pet Stock Association will be held the last week in November (19-20-21-22). The Association special premiums this year will be gold coin instead of cups. A yellow ribbon will go with each coin. The values will be $10 and $5. Frank L. Buck, Secretary.

* * *

JAMESTOWN EXPOSITION SPECIALS.

Contributed by a number of the Club members, to be competed for only by the members of the American Buff Plymouth Rock Club:

$5.00 each on best Cock, Hen, Cockered, Pullet, Pen.

$2.00 each on 2nd best Cock, Hen, Cockerel, Pullet, Pen.

$2.00 each on 3rd best Cock, Hen, Cockerel, Pullet, Pen.

$2.00 each on 4th best Cock, Hen, Cockerel, Pullet, Pen.

$1.00 each on 5th best Cock, Hen, Cockerel, Pullet, Pen.

$10.00 on largest and best display. Possibly $10.00 on second best display. The displays must have at least two or more entries in the open or single classes, and award will be to the exhibitor winning most points in all classes (single birds and breeding pens). Prizes to count as per Club rules.

All Buff Rock breeders, not already members of the Club, should join at once and be eligible to compete for the above Specials, as well as the fine Silver Cup and ribbons offered by the Club. Send your application fee of $1.00 to C. A. Morton, Secretary, 510 Chamber of Commerce, St. Louis, Mo., and for premium list to Jno. A. Murkin, Jr., Nashville, Tenn. The entries close October 1st.

Contributions for the cash specials are herewith solicited and should be sent to

W. C. DENNY,
Ex-Secretary,
Rochester, New York.

PARTRIDGE WYANDOTTE

By MELVILLE H. COFFIN,
Whitinsville Mass.

Pres. Partridge Wyandotte Club.

In regard to the Partridge Wyandottes: Naturally I was a Brahma fancier until I went to raising pheasandts. I found then I was obliged to change my breed for something that would lay in the winter in order to get early setters, so I determined to get several breeds for one years' trial before I selected one for permanent breeding. I secured eggs from the best stocks as far as I was capable of judging in the country, of White Wyandottes, White Plymouth Rocks, Rhode Island Reds, and Partridge Wyandottes. In the fall I succeeded in finding 27 pullets of the Partridge Wyandottes and disposed of all the extra birds of the other varieties, so I had 27 pullets of each kind and chose November as my month for the laying contest. From the 27 Partridge Wyandottes I received 489 eggs; from the 27 Rhode Island Reds, which where second, I received 387 eggs; White Wyandottes were next; White Plymouth Rocks were fourth; White Brahmas laid a very few. In July I marketed my extra cockerells, the market price of which at that time was $.35 per pound; and for the Partridge and White Wyandottes I received $.40; for the White Plymouth Rocks I received $.32 and for the Rhode Island Reeds $.25, and when I got through with the year I found the Partridge Wyandottes, from a profitable standpoint, were very far ahead of any of the other breeds, so I decided to breed them.

For the first few years I was very much discouraged in trying to breed them to feather, as I found there were so many culls among them. All being the same stock should breed more nearly alike, however, I rather enjoyed the uncertainty and was determined to keep breeding them until I had established a strain that would breed evenly. This I have succeeded in doing to quite an extent and this year I find all the birds are very much better than ever before.

I have a pullet hatched the 3d day of May and she laid her first egg the 23d day of August. This is the shortest time I have ever known of a chicken growing to sufficient development to produce eggs at that age.

I consider them the very handsomest fowl there is and one of the very best for utility, being first-class layers and the very best of excellent poultry and just hard enough to breed to feather to interest a sportsman.

Your very truly,
MELVIN H. COFFIN.

* * *

At the Whitney's Point Fair about 2,000 birds exhibited by George T. Burns of Tillsonbury, Ont., Osburn of Norwich, W. A. Smith of Whitney's Point, Turner & Oliver of Horseheads, Gus Braun of Syracuse and the rest by local exhibitors. Quality was good for this time of year. Some especially well developed stock, among it a Black Leghorn cockerel that is unquestionably the best bird of any variety ever seen at this time of the year.

* * *

TO BE EXACT.—"What's that sign you're making there?" asked the grocer.

"'Fresh Eggs,'" replied the new clerk.

"H'm! Make it read 'Fresh-laid Eggs' while you're about it."

"What for? Everybody knows the eggs were fresh when they were laid."

"Just so, and that's all it's safe for us to say about them."—Exchange.

The Shore Line Poultry, Pigeon and Pet Stock Association of Guildford, Conn., will hold their second annual show in Town Hall, Guilford, Conn., Jan. 15 to 16, 1908.

Our association is a young, vigorous organization, brim full of enthusiasm and composed of genuine "chicken cranks," who assure visiting fanciers that show with us a glad hand, a hearty welcome and, above all, a square deal. In Senator Nichols, Professor Card and Judge Bunnell, we have as fine a trio of ribbon placers as the country affords and a prize placed by them is a ribbon on the *best bird.*

Be sure and send for premium list to

Guilford, Conn.

The fifth annual exhibition of the Pierce City-Monett Poultry Association will be held at Pierce City, Mo., December 16 to 19. Thos. Carlin, Secretary.

A complete list of northwestern shows follows:

Fall Fairs

Sept. 16-21.—Oregon State Fair, Salem, Ore., E. A. Welch, Sec'y.; H. C. Shellhous, Supt. Poultry; E. Carlisle, Judge.

Sept. 23-28.—Washington State Fair, North Yakima, Wash., G. A. Graham, Sec'y; Harry H. Collier, Supt. Poultry; J A. Tucker, Judge.

Sept. 23 to Oct. 5.—Spokane Inter-State Fair, Robert H. Cosgrove, Sec'y; Harry H. Collier, Supt. Poultry.

WINTER SHOWS.

Dec. 2-6.—Vancouver, B. C., J. C. Dixon, Sec'y.

Dec. 3-7.—Everett, Wash., F. R. Dafoe, Sec'y; H. H. Collier, Judge.

Dec. 10-15.—Tacoma, Wash., Seth W. Geer, Sec'y; Elmer Dixon and J. C. Dixon, Judges.

Dec. 17-21.—Olympia, Wash., C. L. Brown, Sec'y; H. H. Collier, Judge.

Dec. 17-21.—Ellensburg, Wash., Mrs. J. E. Zehner, Sec'y; Elmer Dixon, Judge.

Jan. 8-11, 1908.—Wenatchee, Wash., John N. Johnson, Sec'y; H. H. Collier, Judge.

Jan. 20-25.—Seattle, Wash., G. S. Deming, Sec'y; W. C. Denny, Judge.

* * *

The Inter-State Fair, to be held at Trenton, N. J., Sept. 30 to Oct. 4, promises to bring out a large entry in both poultry and pigeon departments. The entry fee for poultry is $1.00 for single entries and $2.00 for breeding pens, for the selling classes $1.00 is charged. No additional entry fee is required for the winners' classes.

First prize will be $2.50 and $1.00 second, third, fourth and fifth ribbons.

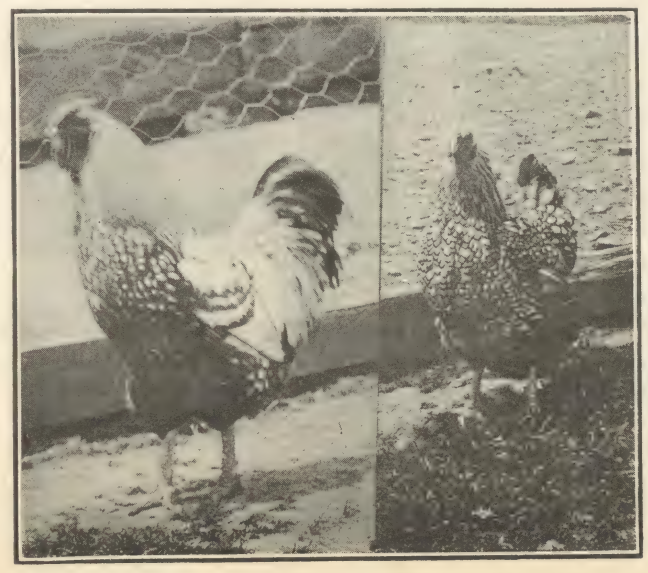
The following specials will be in competition.

The Bamberger Challenge Trophy which is in the form of a handsome sterling silver cup with $5.00 in gold added by the Association will be up again for the third time.

White Plymouth Rocks won it the first year and Japanese Silkies last year, so that everybody should be interested in it.

Pit games have the Shoenthal Challenge Cup and $5.00 in cash added by the Association for the best display.

Spratt's Patent are to the front again with $10.00 in gold, offering $5.00 for the best cockerel, any variety, and $5.00 in gold for the best pullet, so don't forget to use their foods and state so on your entry blanks.



Sunwick Poultry Farm offers $5.00 in gold.

Peapack Farm Trophy is to be offered for the first time.

A. P. Coles offers $3.00 for the best shaped Blue Andalusian.

James Smalley offers $2.00 in cash for the best La Fleche Pullet.

Carlos Staaf offers $1.00 in cash for the best shaped standard Birchen Game, and a host of others, but these are given to show that it is the desire of the Association to have a long list and that any amount from $1.00 is most acceptable and will be highly appreciated.

PREPARING TURKEYS FOR SHOWS.

It is customary for most poultry fanciers, previous to sending their birds to an exhibition, to place them for a few days in what they term the training pen, and visit them several times a day, so that the birds may be partially reconciled to the surroundings and conditions which they will be subjected to.

Turkeys having the run of the farm and meadows require, if anything, rather more training than suburban poultry. It is, therefore, as well to place the bird intended for exhibition in a wire pen, similar to those used at shows, two or three days previous to sending it off. The pen should not be exposed to a strong light, and if stood on a table the owner can see the bird much better, and can compare it with others to a greater advantage than when running in the fields.

The majority of turkeys, says W. W. Harris, in Feather and Life, simply require their head and legs washed, but the white frequently will need washing all over; this should be done the day before dispatching the bird. The best plan is for two persons to wash the bird, in a large tub filled with warm water and yellow soapsuds, to which no soda has been added, but in which a blue bag has been just slightly squeezed. When well wet the feathers are not brittle, and will bear a moderate amount of rubbing.

The bird should then be rinsed in cold water and placed in a large hamper before the fire for an hour or two, care being taken it does not take cold by sudden exposure to cold air.

As weight counts largely in the judging of turkeys, many fatten the birds for several weeks before with plenty of soft food; but this acts very detrimentally if the bird be intended for breeding from the following year.

The birds must, of course, be in good condition and plumage, and the latter may be greatly improved by giving buckwheat once a day or so for a week or ten days, with occasionally a little hemp seed. Linseed boiled and mixed with meal given once or twice will also tend, owing to its oily nature, to impart a nice sheen to the plumage.

When in the training pen, it is advisable to feed sparingly—the bird having little exercise—on meal, and a cabbage hung up for it to peck at, and the day before being sent off it should have a good square meal of corn, and be given water into which a little Douglas mixture has ben added.

The hamper should be large enough that the turkey can turn round without damaging its tail, and should be lined with canvas, so as to prevent the bird taking cold by standing about on draughty railway stations, and at all times it prevents curious and mischievous persons playing with the bird and putting anything in the hamper.

Upon the return of the bird it should not be let with the others, but should be fed on soft food and allowed some green stuff, giving it little water, but not letting it have any corn; the bird having fasted some time requires to assimilate the food as easily and as soon as possible.

If it be allowed to eat any quantity of corn it is liable to get crop-bound. The following day it may be fed as usual. It is as well, as previously mentioned, to keep the bird in quarantine for a few days.

* * *

Geese should have a large range on the farm. They will pick up much of their food and when the grass becomes green, will obtain almost all of it. Such geese always produce stronger goslings and yield a bigger profit. Their feed should consist principally of oats, wheat and corn, fed alternately and sufficient in quantity to keep them in medium flesh.

Always mention this paper when you write to our advertisers.

SILVER LACED WYANDOTTE CLUB.

Editor:

Kindly say that the Silver Laced Wyandotte Club will offer four elegant artistic blue ribbons for the best cock, cockerel, hen and pullet at 40 of the leading shows of the country. These ribons will be superior to any ribbons heretofore offered by any other club, and it is hoped that this will tend to bring out a strong showing of Silver Laced Wyandottes—the original Wyandottes, the most beautiful of all the Wyandotte family.

The only string to these beautiful ribbons is that every winning bird must score 90 points or better, and the officiating judge must be a member of the American Poultry Association.

Secretaries of poultry shows should put themselves into communication with the undersigned, and every lover of Silver Laced Wyandottes should send his name at once, and obtain particulars as to our club.

Yours truly,
HENRY STEINMESCH,
President.

A question which is of interest to almost all poultry-keepers, and especially to those who specialize in egg production, is whether the presence of a male bird affects the egg supply. This is a question which is constantly cropping up, but it is really somewhat difficult to decide, because it is impossible to prove that more or less eggs would have been produced, had there been a male bird with the hens, or had they been alone. Personally I do not think that the presence or absence of a cock has any influence whatever upon the number of eggs produced, and thus when eggs are intended for marketing purposes it does not matter which plan is followed. There are, however, some other matters worthy of consideration besides the actual number of eggs produced, points which are, perhaps, only of secondary importance compared with the yield of eggs, but at the same time ones affecting the results. When hens are kept in flocks by themselves much greater difficulty is experienced in keeping them together, especially when allowed their freedom. In runs it does not matter, but even in this case, if the hens are able to see a cock, some of them are almost certain to fly

Rosemary Farm—Huntington, Long Island, N. Y.

over the netting so as to get near him. Hens at liberty are very liable to stray away if there is no male bird with them, possibly wandering so far that they do not return to their house. This difficulty can be overcome by keeping only one cock with them, even though there be forty of fifty hens in a flock. For some reasons it is advisable, however, notwithstanding the drawbacks just mentioned, to keep the hens alone, and especially is this so if the eggs are wanted for preserving, as sterile eggs maintain their freshness better than do those containing the germ of life.

* * *

Clover is also rich in lime, and when a mash of cut clover and bran is given the fowls will need no oyster shells as a source from which to provide lime for the shells of eggs. Where stock is fed on clover there is always a supply of broken clover heads and leaves; use these with cut clover hay. For a small flock of poultry it may be cut by simply taking it up in large handfuls and clipping it off with shears; but for a large flock it will require a clover cutting machine to furnish the supply. On account of the laxative tendencies of the bran the clover mash should be fed only every other morning.

The Lancaster County Poultry and Pigeon Association will hold their fifth annual exhibition at Lititz, Pa., December 23 to 28. F. G. Bean and Charles T. Cornman will judge. Entries close December 14th. H. H. McCloud, Secretary.

* * *

Forest City, Pa., Sept. 3, 1907.

Mr. Editor:

It does seem good to get the old American Fancier again; it seems like old-time friends. We have been a reader of the "A. F." nearly all the time since its first issue and we hope it will ever continue to live and grow.

Yours, with best wishes,
W. E. SAMSON.

P. S.—We will prepare you an article for October 1 issue.

* * *

Potatoes boiled, mashed and mixed with cornmeal makes a good fattening ration, also pumpkins and squashes. Keep charcoal before them and plenty of fresh drinking water.

* * *

Mineola, L. I.—The 66th annual exhibition of the Agricultural Society of Queens and Nassau Counties will be held September 24 to 28.

T. Farrer Rackham, secretary of the Inter-State Fair at Trenton, in issuing the premium list in bulletin form has originated quite an innovation.

The pamphlet is most complete and concise. The classification of poultry, which consists of 472 classes, list of judges, specials and the rules and regulations of the Association are all printed in this pamphlet.

Mr. Rackham's idea is a good one, a great saving of both time and expense, and should meet with general approval.

* * *

Pigeons at Richmond, S. I.

The great Inter-Borough Fair, held at Richmond, S. I., came to a close September 7. The poultry display consisted of over 600 penned in a large tent, adjoining was the tent for the pigeon display. Forty-two varieties were on exhibition. The quality in most classes were good, but some should have been kept at home. This was the third annual show, and for so young an association it was indeed a very good showing of pigeons.

One exhibitor took his only entry, a Parlor Tumbler, out of its cage at judging time, and it was a rather country sight to see the tall fellow run down the aisle to the judge and exclaim: "This is my little Parlor Tumbler, 'Billy.'" He won first and also dissatisfaction from the other exhibitors.

The entry in Flying Homers was large, but the quality not as good as former years. Dragoons came out pretty fair, but not as many nor as good a quality as last year. Fantails was a very good display and much improved over last year. Turbits made their first appearance at Richmond this year.

* * *

Magpies, mostly black and yellow, were fair; nothing startling.

Runts came out pretty strong in black and blues and silvers. Some fine Carneaux were shown.

The Squab classes were filled with fine large white crosses.

Jacobins and Frillbacks were well represented.

Show Homers were very poor. The birds lacked the proper type of this grand variety.

The pigeon was twice the size of last year and the prospects are favorable for a much larger turnout next season.

About three hundred pigeons were on exhibition. Yours truly,

W. EVERETT JOHNSON.

* * *

The great Hagerstown, Md., show this year will be October 15-18. For many years pigeons have held a prominent place at Hagerstown. Quality has always been found at this popular show, as many of the leading exhibitors in pigeon circles have always sent a good string. This department will be in the charge of Charles Fink and Henry Miller.

* * *

Fort Worth, Texas, will again be in the field with an exhibition, December 3-6.

P. W. Hunt is looking after the pigeon department.

Texas has many good pigen fanciers and should make this exhibition extremely strong in this department.

U. B. Ulrich of Reading, Pa., has been appointed to judge pigeons at the coming York City Poultry, Pigeon and Pet Stock Association, to be held at York, Pa., Nov. 18 to 23.

The entry fee for pigeons at the Inter-State, Trenton, N. J., in all classes is 50 cents per bird, which includes coop fee, feed, etc.

The prizes in open classes for pigeons will be $2.00 first prize; $1.00 second prize; third, fourth and fifth, ribbons awarded.

The Pigeon Department will be governed by the rules and regulations used in the Poultry Department.

Classes will be provided for all standard varieties. Birds will be shown singly and there will be cock classes and hen classes for all of the above.

No. 1907 closses will be provided.

However, any class will be opened if the exhibitor will guarantee to pay for six entries.

* * *

The premium list of the Jamestown Exposition has been mailed to all intending exhibitors. Entry fee and premium money is as stated in the Sept. 1 issue of the American Fancier. The only two judges named in the list are W. J. Stanton and George Ewald.

Should Jamestown be fortunate in securing a large pigeon entry, the two judges will certainly be taxed to their utmost.

Pigeons do not figure in the special prizes offered by the Association and others.

* * *

The third annual exhibition of the Evansville Poultry and Pigeon Association will be held January 6 to 11. The judges are S. B. Lane and George Ewald. The entry fee will be 25 cents for each bird and the premiums will be $1 first and 50 cents second, five entries to fill a class. For premium list address the secretary, H. J. Reimer, No. 113 Heinlein Ave., Evansville, Ind.

* * *

PIGEON AWARDS OF NEW YORK STATE FAIR.

Pouters entered by Graboskey Bros. and Constant Mariotte, both showed fine strings. Constant Mariotte in Pigmy Pouters had no competition; we hope the boys will show up next year. H. and J. G. Smith controlled the Carriers, Barbs, Dragons, Show Antwerps and Ice Pigeons. Dr. Fairbanks showed his same lot of Homers, and made the boys hustle. Dr. Hurdis sent some fine white Homers, and Fantails. J. Edw. Steates showed some Short Face Tumblers, which were well marked. Herman Irrig showed his same winning strain that made the boys sit up and take notice.

Pouters—Black Cock—Graboskey, 1 and 3; C. Mariotte, 2. Hen—C. Mariotte, 1. Fine Markings—Graboskey, 2 and 3. Yellow Cock—Graboskey, 1 and 2. Good on Legs—C. Mariotte, 3. Hen—Graboskey, 1 and 2; C. Mariotte, 3, Red C, Graboskey, 1 and 2; Hens, 1 and 2. Blues, all to Graboskey; White, all to Mariotte. Pigmy Pouters, all to Mariotte. Carriers, all to H. and J. G. Smith. Exhibition Working Homers—Black C.—Landerdale Farm 1, C. A. Davis, 2; Hens, the same. Blue Cock—C. A. Davis, 1; good head and color. Dr. Fairbanks, 2; fails in head points. Hen, Dr. Fairbanks, 1; good head; C. A. Davis, 2. Black Checks, all to Fairbanks. Blue Checks, C. John Hurdis, 1; good head and color; C. A. Davis, 2; Dr. Fairbanks, 3 and 4; Hen, Hurdis, 1; Fairbanks, 2 and 3. Red Check C, C. A. Davis, 1 and 3; Good head, Mariotte, 2; Fail in head, Fairbanks, 4. Reds, all to the Landerdale. White C, Hurdis, 1, 2, 3; Mariotte, 4; Any other color, C. Fairbanks, 1. Hens, C. A. Davis, 1; Fairbanks, 2; Record Homers, all to Fairbanks. Barbs, all to Smith. C. L. Tumblers, all to C. A. Davis. Muff Tumblers, Black, C. Marriotte, 1; Good head and muffs, C. A. Davis, 2; Fails in head, Graboskey, 3 and 4. Hens, Graboskey, 1 and 4; Mariotte, 2; C. A. Davis, 3. Red Hen, Graboskey, 1; C. A. Davis, 2. Yellow C—C. A. Davis, 1; Good head and eye. Graboskey 2 and 3. Hen, Graboskey, 1; White, all Mariotte. Parlor Tumblers, all to C. A. Davis. Short Face Tumblers, all to Steates; Jacobins, all to Wm. Russell. Magpies, all to Mrs. C. J. E. Davis. Black C, Russell, 1; Hen, 1; African and Chinese Owls, all to Herman A. Irrig. Fantails, all to Dr. John Hurdis. Oriental Frills, all to Mariotte. Turbits, all to Mrs. Davis; Dragoons, all to Smith; Show Antwerps and Ice Pigeons, all to Smith.

C. A. DAVIS.

At this time of the year great attention should be given both old and young pigeons.

The youngsters of delicate color, such as yellow, blue and reds, should be kept from the sun's rays as much as possible. Condition in the show pen one must remember is half the battle. C. A. House in Pigeon and Poultry has the following to say:

Condition, or the lack of it, will have much to do with the awards at shows during the next few weeks, I wish to lead some of my young friends into the desired way of obtaining it. When birds which have been attending to the requirements of the later nests of young birds are relieved of their parental responsibilities, they should be allowed plenty of flight room, fed rather sparingly, and upon as non-heating a diet as possible. For the first few days after leaving the young they should be given a pinch of Epson Salts morning and night. This will cool their blood, cleanse their systems, and assist in keeping their jackets intact. They should be given a bath every other day to cleanse and brighten their plumage. Birds of the wattled varieties will need a more searching preparation than those belonging to the non-wattled breeds. During the breeding season the birds with heavy wattles and ceres become very much messed up about the head, and unless this is put right the chances of the birds are seriously jeopardized. Only the other day I was at a show, and noticing a famous bird rather low down in the list, I said to his owner, "The old boy is a bit out of form today." "Yes," he replied, "he has been feeding." Not only was this perfectly true, but it could be seen the bird bore traces of having been engaged in that happy parental pastime. That, however, should not have been. All traces of his family cares should have been removed ere he left home. A bowl of warm water, a few drops of Sanitas, a large tooth brush, a small sponge, a piece of Spratt's Poultry and Pigeon soap, and a nice soft towel would have removed the traces of feeding which this grand old warrior bore. Some exhibitors presume on the fact that judges do not like to pass the champion birds, and thus will not take the trouble to put them down spick and span. I hardly know who to blame most the judges who allow such presumption to grow up in exhibitors' minds, or the exhibitors who presume. When a bird is put down clean and smart it looks as though the owner takes a pride in the appearance of his stock, and it is only fitting that his labours should be rewarded. There is one northern fancier whom I know who is most assiduous in the care and attention which he bestows upon his birds, and the result is to be seen in the innumerable firsts and specials which he captures. Yet more than once have I heard fanciers envious of his success depreciate his birds and his labours by says, "He's no fancier, he's only a showman." In a way their depreciation adds to the honor gained by the man they belittle, for if he works, as he does work to secure his reward that reward must be sweet to him, and well deserved. A good bird deserves to be well shown, and a moderate bird even is much improved by being well shown. Condition should be a far greater factor in the awards of our judges than it is. A man who is careless of the condition in which his birds are shown is not, and cannot be a true fancier, because he does not consider the health and comfort of his birds. A bird in good condition is a bird in good health, and a bird in good health is happy and contented, and enjoys life as well as his master, who should, in return for the labour he bestows on his pets, receive all the encouragement that can possibly be given him by our judges.

THE SQUAB—BREEDER TYPE.

BY W. G. TODD.

I was most interested in reading in the last issue of The American Fancier an article on the Show Homer. I cannot claim to be an ardent admirer of this bird as a show bird, for my especial interest is in the production of the best type of bird for a squab breeder. I have had my season of raising fancy stock, but for years have been successfully raising squabe for the market. I have had, too, my seasons of misfortune in squab raising, but have taken its reverses as lessons to be studied, and have persisted in the occupation until I find I can afford to give my whole time to it.

My present ambition is the production of a heavy (but not too heavy), round-bodied, chubby, solid squab, with such an inheritance of vigorous health behind him that he quickly grows into the right condition for the table. The Show Homer presents some of the characteristics that I am looking for. His blocky body, solid form, Roman face appeal to me. I want that strong head on my breeders. It indicates that push, persistency and vigor which triumphs over the minor ailments of the pigeon family. I want that general sturdy appearance which he presents, and I have been trying to get it by crossing him with some exra fine breeders already in our lofts at The Practical Pigeon Pens.

It may be asked, "Why not use him in pure-bred form?" The answer is plain to anyone who has tried him—that is, to all those I have heard of on the subject, and according to my own experience. As a pure-bred producer of squabs, he is slow, lazy about feeding, and his squabs take a long time in coming to maturity. Certain dealers in these birds claim they are prolific, but I think they must be comparing them with other fancy varieties even less capable of raising their own young, and not lining them up along side of the rapid breeders demanded by the squab men. The squab business has its own standards, and the pure-bred Show Homer falls far below them.

The Show Homer, however, has its uses in crossing for the production of the ideal type of squab breeder. But in this work one must use good judgment, and have knowledge of the varieties he will use in the crossing. He must know their natural tendencies, their influence in the cross. The Show Homer, for instance, crossed with the Dragoon is a failure as a squab breeder. Both varieties are slow in breeding, too slow in maturing. The Show Homer with the Runt is no better—perhaps even worse. With the Working Homer he is but little better. His breeding tendencies have more influence than the more rapid breeding tendencies of the straight Homer. The Show Homer crossed with the Carneau, with the Maltese Hen, with the Duchesse, produces a good worker in every way and a good type. The rapid breeding tendencies of these three varieties overcome the sluggish nature of the Show Homer, the product is a good breeder with a good form. Better still, I think, is the triangular cross, the mating together first two varieties that are known as rapid breeders, and then mating the offspring of these with the Show Homer. This process divides the influence of the two varieties which may be represented by the two corners of the base of the triangle, and allows the preponderating influence of the Show Homer at the apex of the triangle to control the form of the young.

These, and many other points in breeding must be carefully studied by the man who would produce the right stock for squab raising. I like best to mate a Show Homer cock with the right kind of a rapid breeding, and good feeding hen. By rapid breeding, I mean eight pairs of squabs per year to each pair of breeders. By wise crossing, selection, record keeping, we get them, and so can anyone.

MOULTING BY A. E. ROBST.

THIS is moulting time, a periodical function necessary for a pigeon's complete development and health. During the moulting a pigeon will lose its sprightliness, gets lazy and wants to be let alone. Usually each pigeon will moult but once a year, excepting young birds; when a youngster leaves its nest around March 1, it will not go through a total moult that year, probably only lose his head and neck feathers, late birds rarely moult till the following year, though at times they will start in early. Really pigeons moult for about six months a year. As early as May they will lose the first feathers beginning with the large wing or tail feathers, starting with the innermost of the flights about four weeks later the second flight falls. After the second and thirds have gone the rest follow quickly at intervals of from eight to 12 days, followed by the saddle feathers and the general moult all over the neck and head will be almost bare (a good moulting should appear in that fashion) with quills sticking out all over both. The tail goes through a similar routine, almost invariably the fifth feather, counting from outside toward center, is the first feather to drop and will have grown again about three-quarter size before the sixth or center feathers fall out, and these will appear when the fourth and third follow in rotation; curiously the last to fall is the second feather. This gradual change of feathers wisely arranged never deprives the bird of their usefulness, there always being a sufficient number of wing and tail feathers left or new grown for aerial navigation.

The careful breeder will notice that the original or nest feathers have little or no lustre, but after moulting the lustre appears and much longer and better formed feathers as well. Moulting does not change the original color as a rule. There are, however, exceptions, especially in yellows and reds, which when leaving the nest will appear as solid colored birds and moult out as splashes, also light colored barred birds will get wider bars with each moult.

The birds must be fed good previous and during the moult, varying the feed as much as possiblee. Old lime mortar taken from old brick walls, burnt clay, plenty of clean water, salty substances will do wonders, but most essentially a clean loft and roosts and do not attempt to breed the birds during September to show time if you expect to have healthy stock for the next breeding season.

* * *

THE TURBIT.

In a lecture on Turbits, Mr. Houghton, the well-known English judge, says:

"There is only one type that should win, and that is the Roman-nosed frog-mouthed Turbit. The round headed, owl-like shape, with a decided hollow in the face is the wrong type. We have left that behind years ago. In head it should be distinct from the owl, presenting an even curve from the tip of the back to the top of the skull, and possessing width at gape, nearly equal to that of the skull. The perfect sweep is indispensable to the beauty of the bird.

"Many argue that the Turbit should be down-faced. All perfectly formed Roman-nosed Turbits are bound to be down-faced. You cannot get the sweep or curve otherwise. But I am quite in favor of not using the word down-faced in our standard of excellence. It might be misleading, as many flat-faced birds inherit the down face.

"I was one of four who compiled the Turbit Club's revised standard of excellence in 1903, and I should like to make a few remarks thereon. We commence with size. Size, 10 points: 'Small, compact and cobby, very full in breast, with upright carriage, short in flights and tail, the former carried well up, and not drooping.' My idea of size is that it should be between that of the African and English owl. * * * To my mind the head should be somewhat oblong in shape, with as much in front of the eye as is possible to get, providing it has the fullness and width of the nasal. The nose should grow into the centre of the wattle, leaving an unbroken line.

"The beak is most difficult to get in substance, and all breeders will meet with many disappointments. How often the top mandible will come thick, and the lower one very thin, or again many are open mouthed, open in the centre. I have nearly always found these to have a curled tongue. A proper beak should be the same distance from the top of the upper mandible, commencing at the centre of the nose to the bottom mandible, as it is in the width, forming the same substance, which ever way you look at it."

"The beak setting and sweep is undoubtedly the most difficult point to breed in the Turbit, and should a bird fail in these points it is detected at once. I cannot do better than quote from my article which I sent to one of the fanciers' newspapers a few years ago. When the upper part of the upper mandible in its perfectly natural growth forms an exact continuance of the sweep of the skull, it is bound to give the head what is now termed the Roman-nosed appearance. A stout beak, correctly placed, and not pinched at gape, is the most difficult property to produce, and cannot be overrated from a breeder's point of view, more particularly when found in hens. I would at any time sooner breed from a properly set fine beak, than a badly set stout one.

"The peak and mane have been very much interfered with by the introduction of the Oriental blood, which were mostly plain-headed, but I am pleased to say that the Turbits of to-day are being bred with better peaks and manes than they have had for several years.

"The gullet is a point we cannot afford to sacrifice. A bird with a good gullet is sure to catch the judge's eye, as it makes him so much wider through the neck from gullet to mane, and forms a wider basis at the shoulders, giving the cobby appearance which we require.

"In thick beaked specimens we generally find they have a tendency to grow more wattle than is required, and in a good many of our Turbits, which win as young birds, by the second season, the wattle has grown up above the nasal feathers, forming a ridge and breaking the outline, but these birds I find the very useful in the breeding loft, when mated to fine textured hens.

"I regret to say several of our breeders in the last two years have been showing Turbits with good profiles, nice set beaks, and which could have won in many cases, but for the red eye cere. I have always noticed in these birds how small the eye is, not bolting. What we really require is a large, dark, bolting eye, with a fine, flesh-colored cere, and not too much of it. The bolting eye is very important, as it carries the Turbit to the top of high-class pigeons.

"Frill, I might say, has been neglected more than any other in the Turbit, and it is very necessary that breeders should try and improve this most beautiful point. I have no doubt whatever that the Turbits of twenty years ago did excel in frill and color.

"Black, red, yellow, blue and silver, rich, sound and lustrous, the bars of blues to be black, and of silvers to be as dark as possible—broad, even, and distinct. I was very pleased to see that the Turbit Club committee at their last meeting at the Crystal Palace put back the dun from a standard color to that of an off-colored bird. There is no doubt we have lost the beetle green blacks we used to see a few years ago, and, in my opinion, the crossing in of blues has done this, hence also, ticked blues, which are so prevalent.

"The majority of Turbits come with fairly good markings, with the exception of foul thighs, and I think that every bird with foul thighs should lose five points. There is nothing better than a clean-thighed, well marked Turbit."

LOPEZ GRIT For Ducks Chicks Pigeons Poultry A Superior Grit

FOR FOWLS

To be healthy and profitable give plenty of good nutritious grit. Lopez Grit makes them pay. A natural grinder that supplies mineral properties for growth and eggs. Sold in 50 and 100 lb. bags. Sample free. Agents wanted.

The Latest and Best Book on Success With Poultry is

999 QUESTIONS AND ANSWERS

By FRANK HECK

THE author claims and proves that this book contains information upon a greater variety of subjects than any book on poultry ever written. It has also drawn out more unsolicited testimonials from authorities and experts. The following are only a few of the hundreds received:

The book 999 Questions and Answers is the best of the kind I ever read. I never saw a book in the same class.—C. L. SMITH, Sec'y Minn. State Poultry Ass'n, Minneapolis, Minn.

The contents of the book takes the place of accumulated files of the various poultry papers and places the information desired in a handy and concise form.—C. G. HINDS, Pres. Amer. White P. Rock Club, Alameda, Cal.

It contains information for all classes and grades of poultry keepers, from judge to novice.—F. O. WELLCOME, Yarmouth, Me.

There are so many new things in the book and they are so nicely stated that I have taken pleasure in going through it. The unusual quality of the book is that it is full of information for the beginner and it also contains hundreds of things that will be valuable to those of the greatest experience.—T. F. McGREW, Washington, D. C.

The book surely fills a long felt want. Everyone who owns a fowl should also own this valuable book.—AUG. D. ARNOLD, Dillsburg, Pa.

The book will become a very valuable means of information for both old and new breeders, for which they can well afford to pay the price.—JUDGE I. K. FELCH, Natick, Mass.

It contains much of value to the average poultryman, and should meet with ready sale.—JUDGE W. S. RUSSELL, Ottumwa, Iowa.

It is a remarkable book to be the product of one man and I heartily congratulate you upon its production.—JAS. SHACKLETON, Milburn, N. J.

Best of all, it is thoroughly practical. I wish it could be placed in the hands of every poultry keeper in the country. If I could not get another copy I would not take $5 for mine.—EDGAR A. WARREN, author of "200 eggs per hen per year and how to get them," Hampton, N. H.

Why worry and wonder and grope in the dark? Why learn by expensive experience and disappointment when everything is offered you at so small a price? The knowledge gained by years of experience is contained in this book. The methods and secrets of the foremost successful breeders and exhibitors in the show room are given in full. The book is for

VOL. XXVII NEW YORK CITY, OCTOBER 1, 1907 No. 688

"EGGS FOR HATCHING."

By W. E. Samson.

THE ABOVE MAY SEEM out of place at this season of the year and yet we believe none too soon to begin this subject for the coming year. The question was once asked, "When shall we begin to train a child?" The reply, "A hundred years before they are born."

We believe there is no part of the business that has caused more dissatisfaction and in most cases the blame placed where it did not rightly belong, viz., on the shipper, when they had done all that lay in their power to cause them to reach destination in good condition. In our early years of experience we purchased a good many eggs. While some arrived in good condition more arrived that showed very rough handling, and some even showed nearly, if not quite, one-half cracked or broken, baskets with the handle entirely gone, some showed they had been when they had come in contact with other packages that had crushed the sides in, and in some cases the result not a chick from a setting. The above may seem a dark picture but are the facts.

The question arises: How can these matters be remedied? And on this point would be glad to hear from other breeders. Some years ago we were having our own troubles with a certain express company, our customers reporting their shipments being damaged, so we wrote the superintendent of the express company a personal letter. In due time we received a letter from him thanking us for the information, and we had no further trouble that season. There are times when expressage has to be handled very rapidly, and it seems almost impossible to save the eggs from a bad shaking up.

We realize it is the cheaper way for one to get a start in the fancy but suppose they meet with disappointments, as the writer has had—not a chick! Would this not be the end for many and not try again? Again, suppose the basket be robbed of its contents and others replaced. Is not the shipper put down as a dishonest man? Such has been the case. Not two weeks ago the writer took a short trip through the northeastern part of our state and a part of New York state. As the train rolled into one station we were looking out of the window and saw a fine Silver Wyandotte hen, and of course she took our eye. On our return home we wrote immediately to the agent, asking him if he could name the parties that kept the Silver Wyandotte near his station. In his reply he said he was the only one that had any and he had only the one hen, and as he had nothing to mate with her would sell at $1.00, so we enclosed a $1.00 note and on receiving the hen found her a valuable bird. We wrote him at once, asking who's strain she was from. His reply was: "I got the eggs from the train and she is the result of the hatch at the time. I did know the shipper's name, but have forgotten now."

The shipping of eggs has become one of vital importance, both to the shipper and receiver, and we question in our minds but the breeders to-day that are advertising "no eggs for sale" are on the right track.

We believe there would be more real good specimens were there not an egg sold by the fancier, but to arrange matters so that all eggs could be set and reared at home or on nearby farms or even village lots and then not be afraid to cull closely.

We realize there are many points pro and con on this subject that we have not mentioned, but would like to hear from other breeders on the subject, as a great deal of valuable information may be gained, and let us have the experience of others.

PARTRIDGE PLYMOUTH ROCK CLUB FORMED.

A meeting for the purpose of organizing the Partridge Plymouth Rock Club was called at Philadelphia, February 9, 1907. Henry D. Riley was elected temporary Chairman, Maud E. Frese, temporary Secretary. The meeting was called to order and the officers elected to serve for the ensuing year. President, F. A. Keller, Pigeon, Pa.; Vice-President, George Fox, Torrisdale, Pa.; Secretary and Treasurer, W. F. Fotterall, Oakford, Pa. The executive committee consists of the president, vice-president, secretary, and two members, Henry D. Riley and W. H. Moore, were elected. The purpose of the club is to increase the popularity of the Partridge Plymouth Rock, and offer prizes at the leading shows to be competed for by members of the club. It is also our purpose to use our influence with the different associations to appoint judges familiar with the breed, so that the breeder knows exactly what is expected of them. The Secretary will be glad to correspond with anyone contemplating joining the club; dues $2 per year.

WM. F. FOTTERALL,
Secretary.

SILVER WYANDOTTE REPLY.

By E. H. Morris.

Editor AMERICAN FANCIER:—

Your editorial note, with Mr. Samson's letter, makes it necessary to say something on type and to puncture the bubble sent off by a writer of another poultry magazine who may lack experience, but who should have intelligence enough to know that to compare an exaggeration in White, with the real thing in Silver, is overestimating the gullibility of even the tyro in feathers.

The Standard gives 41 points for color and 31 for shape, therefore if my birds are not "ideal" in shape they can give "ideals" (especially like that white bird) points and win.

There were no "ideals" at New York or Boston and very little uniformity, and the two females showing the most uniformity were my 2nd pullet at New York and 1st hen at Boston.

Further referring to the illustrated article in the paper spoken of, I would say the Standard does not attempt to set up for the Silvers type of white, and no judge worthy of the name, no editor worthy of his position, no intelligent breeder, and only one who relies on a too credulous audience would attempt to palm off as an exemplification in a comparison, a picture of a white, more like a Cochin than a Wyandotte, unbalanced, extreme and not a picture of an actual bird. Being a breeder of Whites, the work done in establishing a type is not overlooked, but it is very doubtful whether breeders of Silvers want the white type of five years ago, or even that winning under some judges to-day to prevail in their favorites.

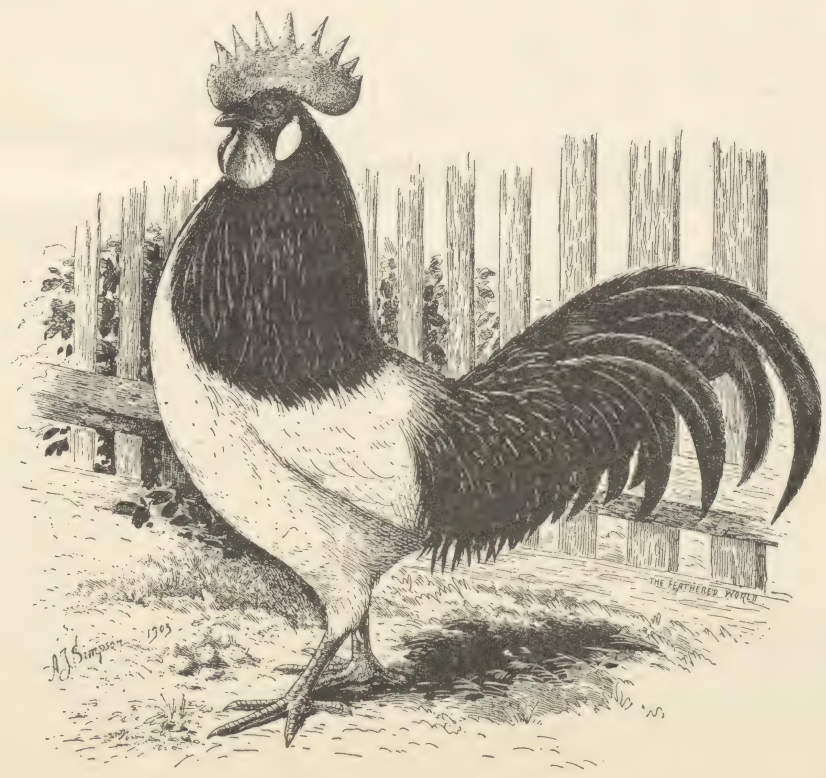
My present breeding operations embrace the whole Wyandotte family, and it is a pleasure to study type in connection with egg production and general utility.

The Cochin type may have the most curves, but it does not give the egg yield, fertility, instinct for foraging and constitution, whilst there is much waste of time in brooding, and when dressed it is found that one without excessive curves is as weighty and plump and that Cochin hair and cushions are no real advantage.

Therefore, instead of Silver breeders imitating White or any other type, they rather want to keep in the middle of the road, adopt the happy medium, keep to standard requirements, and not accept a blind guide, even with A. P. A. endorsement, or a paper behind him.

Mr. Samson is different; he has had experience as a breeder, knows how difficult it is to get the lacing, with size and shape.

After trying in vain to get these three combined from stock of the best known breeders, I struck out for myself and have the lacing, size and good enough shape to suit me at present. The shape is neither Cochin nor Leghorn, and with this and next year's matings a change will be made for less length only. Feather growing constitutes the variation otherwise, and it is too late to go back to the Cochin for fluff and curves.



Uniformity with size and achievements Mr. Samson knows the value of. It is only step by step that these are procurable, and before saying anything more of shape will he take a look at the exhibit at the coming important shows, compare the Silvers, Golden and Blacks with the Partridge Buffs and Whites, ascertain the comparative egg yield and utilities qualities of these three branches of the family, then tell your readers whether in his honest opinion it is not better for Silver breeders to keep away from the Cochin type and maintain those traits which make for beauty and utility combined.

When Mr. Samson's crow sounded in my ear quite arrogant, it made me feel like crowing, and it is right and proper for that crow of his to be tempered with the consideration he uses in his reply. If after seeing my latest productions, he and the clubs decide that Silvers must have Cochin fluff (like the Whites were getting five years ago, which was stopped), it will be possible to get that also, but it is not in the Standard. It is a matter of feather growing and I like to see the curves where the meat is.

A trim, alert medium size type need not be angular, and should have a rounded outline or curves coming nearer to the standard requirements than the dumpy, shapeless lump of feathers and fluff some are anxious for some reason but known to themselves, to foist upon breeders, as ideal Wyandottes.

Is it not time for clubs devoted to particular breeds or branches of different families to send intelligent, wideawake men as delegates to the A. P. A. to prevent those who by virtue of payment of $10—who represent their own sweet selves—who are in a position to so manipulate the standdard that the pioneer work of the past and breeders of to-day shall be of little avail in bringing the various breeds to a higher degree of perfection?

Let the standard be the ideal for at least a year or two and bah! to those who would set up other ideals.

THE GREAT ALLENTOWN FAIR.

A. O. C. Pit Games—1st and 2d, Burns.
Black Rose Comb Bantams—1st and 2d, J. Kreiner.

M. S. GARDNER'S REPORT, NEW YORK STATE FAIR.

White Plymouth Rocks: Not a large class but some fine birds shown, notably 1st young pen, 1st cock and first and second hens. The cockerel in the first pen was in a class by himself, and one of the finest White Rocks the writer has handled at any Fall show.

Silver Penciled Plymouth Rocks: Of this variety there were seven pens and twenty single birds, all shown by Rock Hill Poultry Farm. The young birds showed a marked improvement over the old ones in leg color, ear lobes and in other respects, but will have to be bred several years yet to equal the Silver Penciled Wyandottes in markings.

Silver Wyandottes: Nine pens and twenty-six single birds made up this class. Several good birds were shown, especially in females. The third hen and second pullet were from imported stock, and while showing fine lacing were far from being ideal in shape, having long backs and narrow bodies, the pullet especially being very poor in shape of head. It seems to the writer to be a great mistake to carry the matter of breeding for color and lacing to such an extreme as to entirely neglect shape until birds are produced that have no resemblance in shape to the ideal Wyandotte.

Golden Wyandottes: A small class and quality only fair.

Brown Leghorns: Three pens and twenty single birds. The first cock and first cockerel were fair birds, but the females were not up to the usual standard at Syracuse. It is to be regretted that more breeders of browns do not exhibit at the fair and that the class is so far inferior in quality to the whites.

Rose Comb Brown Leghorns: Six pens and twelve single birds. The class as a whole was superior to the Single Comb Browns.

Black Leghorns: Eight pens and twenty-four single entries were shown in this class, and the quality was extremely good for a September show.

White Minorcas, both Single and Rose Comb, were very small classes, but contained some good specimens.

Rose Comb Black Minorcas: One of the best classes I have seen at Syracuse for some time, five of the first prizes going to T. A. Faulds of London, Ont., Canada.

There were the usual classes of Andalusians, Polish, Houdans, Creve Coeurs, La Fleche, Hamburghs, Red Caps, etc. Taken as a whole the exhibit was, in the writer's opinion,, superior in quality to last year.

"A SQUARE DEAL TO EVERYONE."

Duryea, Pa., Sept. 18th., '07.

Leonard W. Lott & Co.,
New York City.

Dear Sir:—

What catches me is that part of your letter which reads, "awards will be given complete without favor to any one." It is the old principal of THE AMERICAN FANCIER some ten years ago; it means that which every true fancier should help you to be—a success. One year's subscription enclosed; start same immediately.

The idea of a fancier having to be an advertizer to have a mention of his winning is wrong. Will the business heads of the poultry papers ever wake up? No, not until the true fancier wakes up himself and demands his rights, for the backyard man has some. Take him out of the show and you will find the big advertiser and poultry hucksters (of the fall fair kind) only represent the minority. A square deal to everyone is the interpretation of your methods and it surely means a grand success.

Yours Fraternally,
J. W. SCHIEBEL, JR.

BUFF PLYMOUTH ROCKS AT NEW YORK STATE FAIR.

By N. V. Witbeck.

1st pen, old—Cock, deep rich Buff, good Rock shape, good head and comb; 2nd, poor shape Cock, females not matched in color; 3rd, females better matched than 2nd. Cock poor shape and color.

Pen, young. 1st, even color throughout. Cockerel could win in the open classes. 2nd, Cockerel fails in comb, females not even in color.

Single classes. Cock. 1st, Golden Buff throughout, good size, grand in shape, wins easily. 2nd, in poor feather condition, loses in color of surface, poor comb. 3d, poor shape, red on wing bows. 4th, Should have been third. The best Cock was unplaced.

Hens. 1st, even rich color, wins easily. 2nd, good color and shape. 3d, poor in tail color. 4th, better in color and shape than 3rd.

Cockerels. 1st, good surface color, bad comb, too low in breast. 2nd, weak in color of tail, twisted comb. 3rd, fine comb, sound in color, too low in leg. 4th, soft even Buff.

Pullets. 1st, good color and shape. 2nd, another good one, good in color, very good Rock shape. 3rd, poor surface color. 4th, soft Buff, sound in color but small.

ONE BAD RUT.

It is very easy for people to get into ruts which they seem to have difficulty in getting out of, and since very many people keep poultry, poultry keepers are no exception to the rule. One bad rut for poultry keepers to get into is that of keeping mongrel fowls. It is to be hoped that no reader of the AMERICAN FANCIER now keeps mongrels, but if there should be any, let them consider this article as a personal appeal to close out their scrub stock and put their poultry operations upon a new and more profitable and infinitely more pleasant basis.

Probably nobody who pretends to speak understandingly any longer insists that the old barnyard fowl, the flock of all shapes, colors and sizes, will lay more eggs in the course of a year than a flock of an equal number of blooded hens of any of our utility breeds. To be sure, that was the common cry in the days of our fathers, but it is an idea which is certainly very much out of date now.

But it is not the question of profit which ought to be the prime consideration in leading one to exchange his mongrels for thoroughbreds. The matter of personal enjoyment and pleasure ought also to be considered. It is difficult to believe that anybody ever really enjoyed caring for a flock of mongrel fowls. At any rate, if any degree of pleasure can come from keeping a flock of mixed breeds, how much more enjoyment might be in store for the same person if he were given a nice flock of blooded birds, uniform in size, shape and color.

Don't fool around any longer with mongrels. The longer you tolerate them, the longer you cheat yourself out of the real pleasure of being a true fancier. Get some pure-blooded fowls. Never mind what kind you get or where you get them, but get them. If you later decide that you have made a mistake either in the breed or the source, you can easily rectify the matter to your ultimate satisfaction. It is a thing which is sure to work itself out gradually and satisfactorily. The important thing is to make the start. Make it now.

O·K· ROUP REMEDY

A guaranteed Remedy for Roup, Colds, Canker, and Catarrh. Will reduce Swelled Head and Eyes in a short time. Save loss by its use. Mailed, postpaid, for 50 cents. THE O. K. STOCK FOOD CO., 660 Monon Building, Chicago, Ill.

Sixth Edition, With Supplement

"Cocking in Cuba and Mexico"

Illustrated with Handsome Photos

Rules of the Cock Pit

A neat little book of pocket size, well bound in tough tagboard. Contains all the pit rules of the United States, Canada, Mexico, Cuba, England, Belgium and France. Also has comprehensive chapters on Heels, Handling, Nursing and everything relative to the royal sport of cocking.

By Dr. H. P. Clarke, Indianapolis, Ind.

3 Great Books FREE

We have just succeeded in completing, with a book publishing house, one of the greatest contracts for high-class books at EXTREMELY LOW prices yet made. We therefore are now in a position to offer, at a remarkably low figure, such masterpieces as those by the author of the famous "Sherlock Holmes," "Uncle Tom's Cabin," "The Duchess," "Little Men," "East Lynne," "Count of Monte Cristo," etc., etc. Out of the thousands of books at our disposal when we made up the following list, we selected after careful deliberation, the twelve novels which have been found to have proved the most phenomenally popular. For interest riveting mystery, daring adventure, love and thrilling romance, no twelve greater books have ever been assembled. Any TWO of these books will be sent ABSOLUTELY FREE to all who will mail only a dime, 10 cents, for a big trial subscription to what is generally acknowledged the greatest national monthly published at a popular price, HEARST'S AMERICAN HOME MAGAZINE. This big new 32-page periodical has drawn upon all the almost unlimited resources of the great Hearst organization for its endless variety of startling features. Here you will find the provokingly funny color cartoons, the screamingly odd Happy Hooligan, Buster Brown, And Her Name Was Maud, and the dozen and one other marvellous creations of those master minds of mirth and fun—Opper, Outcault, Burks, Bunny, and all the rest. Of the magazine's great editorial writers, only a few of the dozens upon dozens can here be mentioned. Among these are ELLA WHEELER WILCOX, the most brilliant woman in contemporary American life; DINKELSPIEL—the inimitable—the man who has set all the world a-laughing; MAURICE MAETERLINCK, Belgium's foremost living philosopher and litterateur; CLARA MORRIS, the noted actress, who will write of life on the stage and of the busy world; PROFESSOR GARRETT P. SERVISS, who has magically transformed the mysteries of science into tales of marvellous romance, and BEATRICE FAIRFAX, the most brilliant, cleverest woman who has ever written on love, romance, and the things of the heart. These are but a FEW of the master minds who will contribute regularly to the great new HEARST monthly. For the strange—the bizarre, the unlike, the fascinating—read the brilliantly interesting HEARST'S MAGAZINE. (Read below how you can also get a THIRD book free.)

No. L2. The Crime and the Curse. (Mrs. Southworth.)
No. L17. The Old Red House Among the Mountains.
No. L28. On Her Wedding Morn. (C. Braeme).
No. L37. The Love That Saved Him. (Mrs. Stephens).
No. L27. The Great Hampton Bank Robbery.
No. L48. Sweet Is True Love. ("The Duchess.")
No 34. My Mother's Rival. (Braeme.)
No. 6. Lady Gwendolin's Dream. (Braeme).
No. 26. The Bride of an Hour. (Stephens).
No. 16. Beauty's Marriage. (Braeme).
No. 35. Farmer Holt's Daughter. (Garvice).
No. 25. A Maiden All Forlorn. (Duchess).

Order (by number) and secure FREE ANY TWO of the above excellent high-class novels, by mailing IMMEDIATELY a dime for the greatest national monthly published at a popular price—HEARST'S AMERICAN MAGAZINE—if you remit AT ONCE you may also select an extra THIRD book FREE. Order all three books BY NUMBER and address at once.

SILVER WYANDOTTES

SAMSON STRAIN

WORLD'S CHAMPION

OAK LAWN POULTRY FARM

West Nyack, New York

The illustration on cover page clearly shows the true Wyandotte type. This Silver Wyandotte Cock was awarded 2nd at Madison Square Garden 1907. On account of the discussion now going on among poultrymen in reference to the shape and lacing, we believe the cover illustration will be of great interest.

* * *

In our issue of August 15 we published a short article on Wyandotte Shape by W. E. Samson. In the issue of September 1 Mr. Morris replied to this article and also to one published in another poultry paper. In issue of September 15 Mr. Samson's reply to Mr. Morris was published.

* * *

The article or letter from Mr. Morris in another column for this issue is both interesting and instructive. It explains his very decided opinion as to the relative merits of the Wyandotte family. It is a reply to Mr. Samson's letter which appeared in our September 15 issue. It has been admitted by Mr. Samson that the lacing of the bird in question was extraordinary, but on account of the shape and type of this bird Mr. Samson has taken an exception to her receiving 1st over such birds as were shown in competition at the last Madison Square Garden Show.

* * *

With this issue THE AMERICAN FANCIER is mailing a greater number of copies than has ever been mailed since its beginning some fourteen years ago. During the past month we have received numberless letters congratulating us on the policy, quality of paper, articles and make-up. It was our intention at first to answer each one, but this we found impossible, so will take this means of expressing our thanks to all who so very kindly wrote us.

It is the publisher's desire to give the American fanciers a paper devoted purely to their interests and not to the favored few. Our field, although broad, must be most thorough.

The columns of this paper are for all. Personal arguments are neither instructive, interesting nor desirable; but items of interest, news and articles are both instructive and desirable.

* * *

The great and only Madison Square Garden will be the center of the poultry world during the week of December 17. New York has been for years America's largest show, and this season will be no exception.

The premium list will shortly go to press and within a couple of weeks fanciers will have before them the list of judges, specials and classification of this grand exhibition.

Although earlier in the season than formerly, it comes at a most convenient time; the birds should be entirely through the moult and ready for any competition.

Mr. H. V. Crawford, who for years has managed this exhibition, will again officiate as Secretary.

* * *

The Purina Mills have arranged with the secretaries of the larger exhibitions to place a handsome silver cup in competition. A special entry blank is made out for this premium. By the appearance of this cup it will be well worth extra effort being displayed on the part of the exhibitors.

* * *

The Great Allentown Fair brought together the best display of poultry yet seen this year, in fact one of the finest displays ever at an Autumn fair.

The hall, one of the best in America, was thronged with both poultry and people. The quality throughout was of a high order. Most all the exhibits were shown in full plumage.

One of the largest classes was the Brown Leghorns. Miss Sophie Pitchlynn had the honor of winning with her pullet, the W. Theo. Wittman "President's Cup," value $75, for the best Single Comb Brown Leghorn in the show. Miss Pitchlynn's strain is well known, especially her female line, having been most successful last year at Madison Square Garden, Washington, Trenton and numerous other large exhibitions. Columbian Wyandottes brought out another large entry. G. F. Harington captured the cup for the best at Allentown.

Black Leghorn classes were very strong, Adam Noll winning the display over Geo. Burns by three points.

The Mayor's Cup for the best Plymouth Rock was awarded to Mr. Geo. Fox. M. R. Shaner won the Barred Rock special. C. C. Burrough captured the special for the best White Plymouth Rock. Mr. Howard L. Davis won the cup for the best White Leghorn. Cup for the Cock and cup for the best Cockerel was awarded the same exhibitor. Mr. Davis's strain is well known to the present day exhibitor.

I. B. Romig's Black Minorca hen captured the cup for the best Minorca. Steve Burger won the Hotel Imperial Cup for the most typical Light Brahma Bantam. The Black Orpington Cup was won by Mrs. Clinton Fuller.

Game Bantams brought out one of the best classes of the show, over two hundred of the "pigmies" of the fancy being in competition. Among the prominent breeders present were Short Hills Poultry Farm, B. C. Thornton, D. G. Witmyer and others known in the Bantam alleys of our great shows. Black Breasted Red Game Bantam brought together 28 in the single classes, Browns 17, Golden Duckwings 21, Silver Duckwings 23, Birchens 15, Red Piles 27, Whites 12 and Blacks 11. Besides Indian, Cornish Old English of fine quality were exhibited in goodly numbers.

The American Hotel's silver punchbowl for the largest and best display was won by G. A. Turner, who scored 202 points; John Kreiner was second with 198 points, I. S. Miller was third and Geo. Burns was fourth in competition for the above prize.

David Kehm won the special for the best Polish exhibited.

In all Allentown was a great show, bringing together as it did the best fanciers with quality fit for any competition. The management of the Allentown Fair is to be congratulated on the success of the exhibition.

* * *

A FOR SALE AD. brought in 20 inquiries from persons wanting to buy a poultry farm.

AMERICAN POULTRY ASSOCIATION NOTES.

The committee on medals and diplomas, of which Mr. T. F. McGrew, Washington, D. C., is chairman, is busy preparing membership certificates and blanks for judges' licenses.

* * *

By a vote of the Executive Board the first three licenses will be made out in the names of the following well-known judges: Philander Williams, Taunton, Mass., J. Y. Bicknell, Buffalo, N. Y., and I. K. Felch, Natick, Mass.

* * *

The Executive Board will hold a meeting at Cleveland, Ohio, Monday, November 4, 1907.

* * *

The Secretary is revising and correcting the list of members so as to have same nearly as perfect as possible. Any member making a change in address should notify the Secretary immediately.

* * *

The Secretary was instructed to procure a seal for the association, and was authorized to use this seal on all membership certificates issued and judge's licenses granted.

* * *

Proceedings of the meeting held at Auburn, N. Y., January 10th and 11th, 1907, are now being mailed to the members. The copy for these proceedings was placed in the hands of the printers by the late T. E. Orr before his illness.

* * *

The proceedings of the Niagara Falls meeting are now in the hands of the printers and a copy will be mailed to each member shortly.

* * *

The Secretary has tendered his resignation as Secretary-Treasurer of the National White Wyandotte Club. Mr. H. P. Rankin, of Hartington, Neb., has been appointed to fill the vacancy.

* * *

The Executive Board instructed the committee on selection of seal or emblem to confine themselves to poultry and poultry topics in preparing design for emblem and button.

* * *

The American Poultry Association will be officially represented at the Jamestown Poultry Show by the Secretary and such other officials as may find it possible to be in attendance. A poultry institute program is being prepared by the management that will interest and instruct the fanciers attending.

* * *

The Ohio branch of the American Poultry Association will hold their annual mid-winter show at Columbus, Ohio, during the week beginning February 10, 1908.

* * *

Mr. C. M. Bryant, President, has under consideration the appointment of a committee of three who are to organize a Bureau of Lecturers and report at the November 4th meeting of the Executive Board.

* * *

All questions concerning the interpretation of the Standard are to be referred for decision during the interim between meetings to the following committee: T. F. McGrew, Chairman, Theo. Hewes, and Ross C. H. Hallock.

* * *

The territory of the United States and Canada was apportioned by the Executive Board to the following members, each to be a committee of one in the territory designated, on local poultry shows and poultry show rules, the duties being to secure as many associate applications for membership as possible and distribute all information possible: Michigan and Wisconsin, Mr. Geo. S. Barnes; Iowa, Mr. Thos. F. Rigg; Northwest branch, Mr. Geo. D. Holden; Indiana, Illinois, Kansas and Pacific Coast States, Mr. Theo. Hewes; Ohio and Pennsylvania, Mr. S. T. Campbell; South Central branch, Mr. Reese V. Hicks; Massachusetts, Rhode Island, Vermont and Maine, Mr. C. M. Bryant; New York, Mr. Grant M. Curtis; Canada, Mr. H. B. Donovan; California, Mr. Miller Purvis; Connecticut, Mr. D. A. Nichols; all other states, Mr. Ross C. H. Hallock, Secretary.

MISSOURI STATE FAIR SHOW will be held October 5 to 11 and that of the State Poultry Show December 10 to 14.

* * *

SUPT. ASHLEY OF THE TAUNTON FAIR did some hustling to borrow enough coops in time for the Fair. This was caused by the non-arrival of shipments made from Fultonville on September 7 and all attempts to locate the car proved unsuccessful. Fortunately enough coops were borrowed from the surrounding district.

* * *

THE SCOTT COUNTY POULTRY ASSOCIATION will hold their annual poultry show at Winchester, Ill., December 17 to 22, 1907. Chas. McClar will place the awards. Premium list is ready for mailing; apply to Lettie Pieper, Secretary, Winchester, Ill.

* * *

THE SHORT LINE Poultry, Pigeon and Pet Stock Association will hold their annual exhibition at Guilford, Conn., January 15-16, '08. For premium list address Paul P. Ives, Secretary.

* * *

THE HOLYOKE SHOW.

By the time this notice is printed the premium lists for the November 18-22, '07 show of the Holyoke Poultry and Pet Stock Association will have been printed and ready for distribution, and any exhibitor who has not received a copy will be gladly supplied upon request for one being made to the Secretary. We have received a hearty support from our business men and others. Everything points to a most successful show, even more so than our last, and there was no better exhibits in the state outside of Boston. Many of last year's exhibitors have already expressed an intention to be with us again this year. A spirit of harmony and good fellowship prevade in our club and we have the support of those of the fraternity in this vicinity who for many reasons are not members of the club. As for our Judges Pierce and Card, the names alone tell the story. For premium lists and particulars address the Secretary, Frank L. Buck, 60 Pearl Street, Holyoke, Mass.

* * *

THE EASTERN LANGSHAN CLUB.

Will you allow me sufficient space in your valuable paper to announce that the Eastern Langshan Club is prepared to offer at all the shows ribbons, state medals, and three sweepstakes cups for the United States.

The membership of this organization is constantly increasing and the members are enthusiastic. This breed is bound to come into prominence again as a show bird, as well as an utility fowl.

Secretaries of shows should communicate with the undersigned at once for conditions relating to the above offers.

Yours very truly,
John Aldrich, Sec-Treas.,
308 Court Sq. Th. Bldg.,
Springfield, Mass.

* * *

ENGLEWOOD, N. J., November 21 to 23, are the show dates. Fifteen silver cups offered for poultry. D. J. Lambert will judge. Henry Cundell, Superintendent.

* * *

$72.00 IN CASH and 15 letters of inquiry were received by one of our classified advertisers from a single classified ad.

OCTOBER 15th ISSUE WILL CONTAIN REPORT OF ALLENTOWN BY JUDGE DENNY.

Mr. Ross C. H. Hallock, Secretary-Treasurer of our club, has been elected Secretary-Treasurer of the American Poultry Association, and as it will be necessary for him to give his whole time to this work, he has been obliged to resign from the office of Secretary-Treasurer of our club. It is to be regretted that he could not finish the year, but our executive committee have been fortunate in securing Mr. H. P. Rankin of Hartington, Neb., to take this office for the balance of the year. I earnestly hope that all members will help Mr. Rankin in every way possible to carry on the good work of our club. Mr. Rankin will get out the club catalogue, and I hope you will co-operate with him in making this the best one ever gotten out by any club.

The successful associations that secured the $100 offered by the club in the five sections of the country are: Springfield Fanciers' Club of Springfield, Mass.; Eastern Section, Madison Square Garden Show, New York City; Central Section, Lincoln, Neb.; Western Section, Dallas, Tex.; Southern Section and Guelph, Ont., Canadian Section. W. R. GRAVES, Pres.

The Ohio Branch, at a meeting held September 5th at the Ohio State Fair Grounds, decided to change the dates of their first show to the week of February 10th., 1908, which will come between Indianapolis and Pittsburg and make a good circuit, and will have a good list of specials, both cash and merchandise and cups, also the five American Poultry Association specials, valued at $100.00. Columbus is a good town with good railroad facilities, and one of the best interurban centers in the country, which will not only assure exhibitors of good express service but a good attendance. Empire coops will be used and the judges will be announced later on account of change of dates.

The Ohio Branch handed in fourteen new members at the Falls meeting, and have six more now for the meeting of the association in Cleveland on November 4th., and we will try and make it twenty by that date. We have the timber and we will get the members. This increase, together with the sixty old members we now have, will give us one of the strongest branches in the parent body. Our premium lists will be out in good time. Either write to Chas. E. Cram, Secretary Carey of Ohio, or G. R. Haswell, President, of Circleville, Ohio.

Yours very truly,
GEO. R. HASWELL,
President.

The Eastern Silver Wyandotte Club of America will offer four special ribbons especially gotten up for the best cock, hen, cockerel and pullet at fifty of the leading shows of America.

There will also be a special silver medal offered for the best Silver Wyandotte in the show. This medal is without a doubt the finest ever offered by any club, and it is hoped that this will have a tendency to bring out an exceptionally strong class and showing of Silver Laced Wyandottes, both in lacing and shaped combined.

Anyone desiring to join this club can do so by applying to James C. Patterson, Sec-Treas., West Nyack, N. Y.

The annual meeting of the American Leghorn Club will be held in Madison Square Garden, New York City, Thursday, December 19, 1907, during the New York Show. One hundred and sixty dollars in cash will be offered at this show to exhibitors that are members of the American Leghorn Club. This amount is equally divided on each variety.

Send $2.00 to the Secretary and become a member, and win some of the cash prizes.

W. F. Brace, Pres.
W. W. Babcock, Sec'y and Treas.

THE AMERICAN FANCIER

Established 1893.

A Magazine devoted to Standard-Bred Poultry, Pigeons, and Pet Stock.

Bean; 2nd, George Burn; 3rd, Ira Sitterly. Pullet: 1st, George Burn; 2nd, F. G. Bean;

(Continued on page 11.)

The pigeon entry at the great Allentown Fair numbered nearly 1,300 in the single classes, one of the largest if not the largest entry of pigeons ever brought together whether at an Autumn Fair or Winter Show.

Allentown has proven a great attraction for pigeon fanciers, owing to the up-to-date management.

The officers in charge were all well known fanciers, thus the success.

The future of the pigeon display is assusred. A win at this exhibition is certainly no empty honor.

In the Homer classes, 149 were penned in the single classes and 41 Whites. The quality was remarkable for this time of the year and the winners in most all classes could hold their own at any of the winter shows. Mr. Geo. W. Eckert, the well-known fancier, captured the cup for the best Homer in the show. John Shaffer won the special for the best Homer.

The cup for the best Magpie was awarded to Wm. Ehringer. Mr. I. S. Miller received the cup for the best Fantail. The special for the best Tumbler was captured by Jacob Waudel. Muffed Tumblers were out in large numbers; the quality was indeed very fine.

The cup for the best German Toy was won by W. H. Eiseman. W. H. Griess captured the special for the most typical Pigmy Pouter. Geo. W. Eckert won the Owl Trophy. Mr. Ray Brown's Turbit was awarded in the special in Turbit Alley. Wm. Ehringer also captured another special cup for the best Oriental Frill.

The cup for the best show Homer was awarded to W. C. Kohnle's bird after the hottest competition. The special offered by Harvey Keiper was won by Harry Snyder.

* * *

The pigeon section, so often neglected at our annual fixtures, proved a wonderful success at Allentown. We must congratulate the management of this department on the success achieved in this section. When an Autumn fair can bring together nearly 1,300 pigeons, the fancy must be in a most healthy condition.

That great interest is displayed in the pigeon fancy, there is no doubt. Pigeons have attracted the attention of thousands during the past few years, and is to-day on as strong a footing as either the poultry or dog fancy. Fortunately they are supported by a most loyal and ardent class of fanciers. New names are constantly appearing in our show catalogues, amateurs whose entries are capable of giving the strongest kind of competition. The success of Allentown proves what results the proper management can achieve.

* * *

Mr. E. C. Duffy's article in another column of this issue is most instructive, especially to Pigmy Pouter breeders. Mr. Duffy's efforts displayed in promoting the Pigmy Pouter has done much to place the variety where it is to-day. When a variety attracts the attention of such fanciers as Messrs. Diffenderffer, Smith, Jenkins, Brown, Bardoff, Duffy, Dr. Jones and many others, they will probably hold a high position in the fancy.

* * *

The American Jacobin Club will hold its annual meeting at Madison Square Garden, December 17th to 21st. The list of specials in another column of this issue is most complete, covering all colors and classes of the Jacobin family.

The Club has elected Mr. A. W. Ingram as judge at New York. Mr. Ingram is a well-known fancier and is well qualified to handle the "stick" in the classes.

It is the duty of every breeder interested in the Jacobin to join the club and do his part toward furthering this popular variety. Mr. Ed. G. Eby, of Lancaster, Pa., is Secretary.

* * *

Mr. Robst's article on the Fantail in this issue is interesting. Mr. Robst has been most careful in all his researches and has gleaned valuable information from German pigeon books. We had the pleasure recently of looking through one of these books and was surprised, to say the least, of the thoroughness and completeness of these volumes. The colored plates were most up-to-date and although contained many half-tones (taken mostly from life) of the popular varieties of this country, many were of specimens unfamiliar to us. Through the kindness of Mr. Robst we will shortly publish a few of these interesting articles.

* * *

The fancier who is able to get early youngsters has an enormous advantage over those start breeding later in the season. Birds destined to win in the young bird classes of the Autumn fairs and early shows must, as a rule, be hatched early. The early youngsters are the first to moult, generally beginning the first part of August, thus they are in the pink of condition at the time of our first exhibitions.

* * *

The Eastern Fantail Club has mailed all members voting slip for judge and place of meeting. All should be returned October 1st.

The next issue of the FANCIER will announce the judge elected, also the list of specials to be competed for at the annual meet.

* * *

At this time of the year the fancier's attention is naturally turned from the breeding loft to the exhibition hall. The greatest care should now be given the birds—plenty of grit, the best of feed, and plenty of water at all times. Hemp seed should be feed during the moult; a handful is plenty for ten or twelve birds. The bath should be another necessity and should be before the birds every bright morning.

Pigeons will bathe every other day and some every day, if given free access.

The delicate colored birds should now be protected from the sun's rays. Often these colored varieties are ruined for exhibition on this account.

* * *

George Feather, well known in pigeon circles, will officiate at the following shows as judge: Brockton Fair, Mass., October 7, 1907; Madison Square Garden, December 17, 1907; Lynn, Mass., January 6, 1908, and Exeter, N. H., January 7, 1908.

PIGMY POUTER PECULIARITIES.

By E. C. Duffy.

In my experience with pigeons, which covers all the years that I can remember and all the varieties familiar to fanciers of this country, from the common pigeon to the Pigmy Pouter, and that is the whole scale, to my notion, I have noticed that each and every variety—though they are all alike inside—has its own peculiarities, not only its ways and manners, as it were, which might be, and undoubtedly are, governed by the characteristic features and the scientific breeding through which it has passed to bring it to its present perfection, but in the matter of breeding for some particular feature, such as shape, color, marking, etc. I do not intend to note these variances in the different varieties. I could not if I would, as it has been a long time since I have bred anything but the Pigmy, on which I have put all my attention, to the exclusion of all others.

I will not say, however, that my experience with the various varieties is not a help in breeding my present favorites and that in very many ways all pigeons are not alike.

I will give a few of the oddities of the Pigmy, and those who are versed in all the varieties can note the differences.

Mating for specific results is, of course, the principal on which all the different varieties of fancy pigeons are made.

It is the science. All of the science and, without it, we would go back to the Blue Rock from whence we started. But I must add that we often need something more than science in this matter of mating, patience, perseverance and sometimes trickery, to coax, beguile or compel the birds to mate as judgment dictates.

Pigmies will sometimes form aversions for each other that it is almost impossible to overcome. These sometimes last indefinitely and again only for a short time.

This is more so in the spring at mating up time, which makes it more peculiar, as one would naturally think that after they had been separated for several months there would be no trouble whatever in mating any pair desired. It is not, however, the case, and this obstinacy is more definite in whites than in any of the colors, though every hen will prefer the darkest cock. It is almost invariably the hen's fault. They are the contrary ones—naturally. I have known a white hen to refuse to mate with any white cock, fight and drive him around the mating cage, while she would play to any colored cock she could see. This, too, after days and weeks in the mating pen together, and even after a good dose of solitary confinement where she could neither see nor hear any other bird. These cases can be easily overcome by coloring the cock selected. The hen will immediately lose her dislike for him, will mate and work well until he moults or the color fades off, when the old trouble is on again until the cock is treated to a new suit of color.

Such cases are of rare occurrence, as the Pigmy generally is easily subservient to the owner's will.

In the matter of color breeding, where reds and yellows or blues and silvers, or reds and blacks or yellows and blacks are mated, the first nest of the season will follow the hen in color, while during the balance of the year the color of the cock predominates.

I have in mind a red cock, bred from a red cock and a yellow hen, mated to a straight yellow hen for two seasons, threw each year in the first nest two yellows, but reds throughout the rest of the season. Both the reds and yellows from this pair are very strong in color, as is usually the case with such matings.

The same may be said of blues and silvers. The silver softens the blue and the blue darkens the bars of the silvers and gives that delicate steel gray tint that is so much preferable to the dun bar and yellowish shade.

It is not remarkable to get silvers from a pair of blues, usually one in each nest, but blues from a pair of silvers is very odd, though it should not be, for the silver was originally a "sport" from blues, but now is a set color.

The same applies to creams, the latest shade in Pigmy styles. It would be difficult, however, to convince one uninformed in the matter of color breeding that creams are bred from blues and not from yellows, still it is a fact. Creams come at times from two blues of old-line bred strains which for many generations never even saw a yellow Pigmy, and probably have not to this day.

The cream is now a set color, and I have yet to hear from any breeder that they have bred a blue from creams.

I am rather afraid that we shall have trouble at the next few shows

regarding creams and silvers getting into the wrong classes. I know of breeders who are already mistaking light silvers for creams, and some means will have to be devised for their distinction, as the line is very fine.

Another strange freak which I have not been able to explain is the fact that blacks mated to any colored bird will lighten that color. For instance, mate a red to a black and the reds will come lighter, their tails will be clearer, usually perfectly white, while the color of the black will be improved, giving that greenish crow black lustre. It will be found that a red or strawberry bred from black and red will greatly improve the blacks, give better color and clean up the underneath and limbs.

A yellow and black gives poor yellows but fair blacks.

Blue and black produce as a rule smutty blues and rusty blacks, though I have known both colors to come good from this combination. In producing my first yellows, and by the way I may be excused for saying they were the first yellows shown at both New York and Boston, my best results were from what I call bronze hens and yellow or red cocks bred from what we then called yellows, and I find the same true even to-day.

Another strange feature in Pigmy color breeding is the influence the sex of the young has on its color. Silvers more often come hens, as do yellows, also duns and most off-colored birds. I have never seen but one dun cock and but very few yellow barred cocks, while blues and the deep shades in all colors lean to the male sex.

THE FANTAIL.

By A. E. Robst.

The Fantail is called Peacock Pigeon in German, preferring to use live matter rather than a dead article for comparison.

The following is historical rather than descriptive:

"The Fantail obtains its name from the manner in which it carries its tail (similar to a peacock); it is of an imposing and aristocratic appearance and belongs to the oldest varieties. The original home of the Fantail was the northern part of India, where it has been bred for hundreds of years till quite recently, and from there was imported to Holland, England, Germany and France. In East India, according to Darwin, the Fantail was known before 1600. The first German books speak of it (C. G.) in 1669 under the title of Cyprus Fantail, viz: Some aristocratic fanciers spent large sums to import from Holland a variety that carry their tails like a peacock, with their wings almost touching the ground, with their breasts extended out considerable and with their head and neck far back. Their color varies, some are white, some splashed. In size they seem to be about the size of a small field pigeon and have as many as twenty-six feathers in the tail. They fly up similar to a lark, but are easily carried away with the wind."

This is, so far as we know, the first German description of the Fantail pigeon. Some writers (contemporary) do not mention it; probably they did not then know of the bird.

In England Willughby writes first about the Fantail in 1676, calling them broad-tailed Shakers with twenty-six feathers in the tail. Moore describes them in his columbarium in 1735. J. L. Frisch describes them very well in 1740 and shows cuts of them, describing some with black heads and peak crested.

This article is really only an introductory to what follows (the general description).

Formerly four varieties were bred—English, French, Scotch and German. The English and French birds were large and coarse and the German and Scotch smaller and finer built. At the present time really only one variety exists to the general satisfaction of all breeders. The English have brought out the white birds to their best perfection, while the Germans have earned equal laurels with the marked birds. B. Muller of Bremen (died in 1897) deserved most credit in perfecting these varieties.

Typical Fantails.

AMERICAN JACOBIN CLUB.
Specials at New York.

SOLID SILVER CHALLENGE CUP, value $100.00 for best 1907 Jacobin in the show. To be won five times to become absolute property. Donated by John Reid, Stevenson, Scotland. A Silver Medal will be given to the successful exhibitor each year until Cup is won outright.

SOLID SILVER CHALLENGE CUP, value $3.00, for best 1907 Jacobin. To be won three times to become the absolute property. Donated by A. B. Hoskins. Won 1901 by Mr. Koehler, 1902 by Mr. Lang, 1903-4 by Mr. Hoskins, 1906-7 by Mr. Hyde.

SILVER PLATE, value $10.00, for best 1907 Jacobin Cock. Donated by L. W. Hyde.

SILVER PLATE, value $10.00, for best 1907 Jacobin Hen. Donated by L. W. Hyde.

VOL. XXVII NEW YORK CITY, OCTOBER 15, 1907 No. 689

Points on Barred Rocks

By JOHN BREITWIESER.

Back in my youth, 35 years ago, I was presented with five mongrel chickens of all colors by a lady who moved away from Buffalo, and her kindness led me into a channel that I have followed more or less since. After experimenting with these imitations for awhile, I was satisfied that good first class poultry would be the only ones to pay. I bought a setting of Barred Rock eggs from a breeder who claimed to have the best on earth. Out of four pullets I picked two and showed them, and was disqualified, which cooled my ardor; and I found out that you must possess some knowledge yourself when you have good chickens before meeting the judge. I then sold my stock and commenced over, and after ten years of hard lines I knew a Barred Rock when I saw one. The knowledge of high-grade Barred Rocks must come by actual contact, experience and a disposition to learn. Foundation stock must be of the best. No breed of chickens that ever came under my observation were more difficult to mate up than the breed now under consideration in this article.

If raised in the city, they lose that blue lustre of the plumage that a run in the country will produce. Every beginner should start small and work his way up, as the knowledge develops for broader and greater efforts and more confidence in himself. There are 100,000 people in the United States who breed Barred Rocks in their way, and not over 2 per cent. can go to the large shows and win a prize. Thousands of dollars are spent yearly for Barred Rocks that never win out in a show that the buyer has in view, and yet he finds his money gone, and he has the experience, the breeder the money, because the breeder sent him good birds, but by the time he showed them he allowed them to deteriorate, as he was not judge enough himself.

About three years ago a young friend of mine sent $10 for two chickens to a leading breeder of Barred Rocks. He received a cockerel and pullet. In December of that year he showed them. The cockerel had small feathers appearing on the shank, and both were disqualified. This, I claim, was the fault of the breeder, and when such cases can be proven the breeder should refund the money or be disbarred from advertising in honest journals.

To breed a Barred Rock scoring 90 points or over, you must first have a line-bred bird that comes for years from the best blood and a cockerel that will mate the pen. If his color is off or his breeding is weak your work is in vain.

I have bred other breeds and raised birds scoring from 90 to 95½ points the first season, and find them much easier to breed than Barred Rocks; and yet there is no breed of chickens known to the Fancy that is more universally loved or that is a better table fowl or layer of large eggs and more useful to the human family than the famous Barred Rocks.

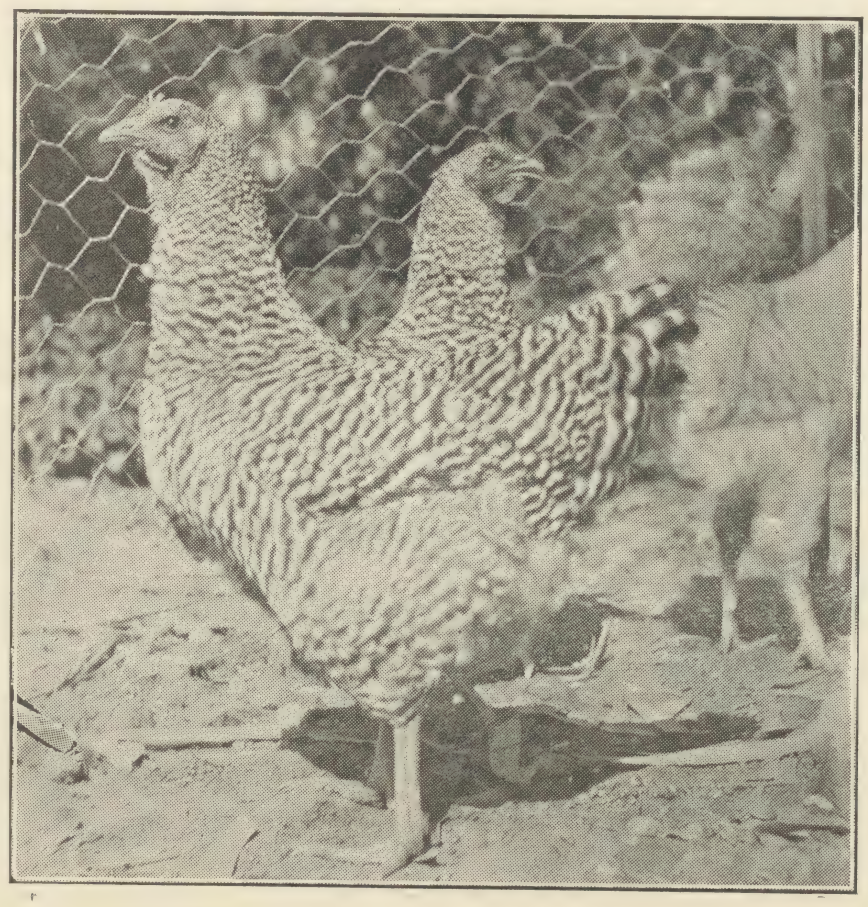
BEWARE OF DRAUGHTS AND DAMPNESS.

The season of the year is approaching when fowls and chicks should be properly housed at night and the question arises: How are we to avoid draughts and dampness? I wish to state for the benefit of those not informed that I have tried every conceivable form, making a failure of them all until I gave the canvass window a trial. I have tried all kinds of ventilation, but could not get rid of the dampness on the floor. Would put in dry litters and in a few days it would be like coming through a pasture after a rain. The heating with stoves was also a failure. In the morning the windows and woodwork would look like a Chinese laundry after a heavy wash. The humidity was so great you could cut it with a knife and I had more fowls sick with roup and canker than ever before. While on the road for THE AMERICAN FANCIER I visited quite a few plants who used canvass instead of glass and an inside shutter to shut down on cold nights. The roost was also hooded and in zero weather the hood was lowered at night and the air was always dry and fresh. The litter would also remain dry.

Keep the birds warm at night. Make them work for all the hard feed they get in the daytime, plenty of fresh water where they will not get their wattels wet, and you will find that roup and canker will be conspicuous by its absence. This has been my experience, as well as many others, and can say that the winters in my section are as boisterous as in any part of the United States.

GEO. W. WEBB.

THE ALLENTOWN FAIR.



By Judge W. C. Denny.

THE Great Allentown Fair was held September 17-20, inclusive, and from every standpoint was a decided success, excepting the weather. It rained hard on Wednesday and Thursday, but large crowds were present and when the figures were totaled on Saturday (the fair was continued a day longer than advertised to finish races), it was reported that they approached the tremendous total of last year. Perhaps nowhere else in the country do such large crowds attend any similar exhibition. In favorable weather, on Thursdays, the big day, more than a hundred thousand people passed through the gates. There is "nothing doing" at Allentown in a business way during Fair week—nothing but the Fair and fun—and there is plenty of fun. Every kind of an attraction is provided; the one that is most interesting to the readers of THE AMERICAN FANCIER is the great display of Poultry and Pigeons, housed and cooped in the finest hall erected exclusively for Poultry exhibits in America, fitted throughout with Empire coops. Over $12,000 has been expended for the erection of the building and cooping it—quite a sum for accommodations to hold a Poultry Show for four days; and the exhibitors should be grateful indeed to Secretary Harry B. Schall, who has been their champion in the society. Mr. George Eckert, the noted pigeon fancier, has also been instrumental in aiding them to secure the magnificent accommodations they possess. One feature that I have not met with elsewhere is a judging aisle in front of the cages. It is formed by an iron railing thirty inches from the tables that support the coops, and, in addition to providing a place where the judges may work without interruption, it insures the exhibitor from having his birds annoyed by being poked at and frightened by visitors who do not understand the nature and temperament of the different varieties of poultry.

If poultrymen are fortunate from the fact that the Allentown Fair Society has been liberal in providing them with such up-to-date accommodations, then the Allentown Fair Society is equally fortunate in having the active co-operation of a progressive local Poultry Association. The Allentown Fancier's Association manage the Poultry Show to a very great extent. All the members are hustlers and more local interest was shown than at any other Fall Show that I have attended. Superintendent Theo. Wittman, Mr. Geo. Eckert, Adam Noll and other well-known business men among the members secured as fine a display of silver cups for special prizes as has ever been offered at any poultry show of this country. Sixty-two cups, with a value of more than $2,000, ranging in size from the usual loving cup to punch bowls, were displayed in glass cases in the Poultry Building. It was a very interesting sight and the many breeders who attended but did not exhibit must surely have coveted some of them and wished they had made an exhibit and been fortunate to win.

The poultry judges were Louis Graham of Glenolden, Pa., and W. C. Denny of Rochester, N. Y., Mr. Graham judging the Mediterraneans, Asiatics, Polish, Hamburgs and Bantams, and Mr. Denny the American and English classes.

Barred Rocks was a well-filled class and some very good birds among them. It was not difficult to place the cup for the best Barred Rock on the first prize Cockerel, a well-shaped bird with nice even color throughout. White Rocks were a hot class—ten cocks, twenty hens, fifteen cockerels, twenty-two pullets, and not a really poor bird in the lot. First cock, a magnificent bird that would be better in three weeks than now, plumage not being fully developed. First and second hens were also good ones. First cockerel an easy winner in his class, as he was better developed than the others, pure white throughout, with fine shape, good head and yellow beak and legs. First, second and third pullets—the three best I have seen this season—the winner standing head and shoulders above the other two. It was difficult to decide whether to give the cup for the best White Plymouth to her or to the Cockerel. Both were "crackerjacks." Thirty-three Buff Rocks were shown in the single classes. The winners were all good, notably the first cock, who won the "Edgar A. Weimer Cup" for the

BARRED PLYMOUTH ROCK PULLETS,
OWNED BY
BREITWIESER'S POULTRY YARD.

best Buff Rock. Some excellent Partridge Plymouth Rocks were shown, especially in the old birds. Among the small class of Silver Plymouth Rocks shown was a beautiful hen and pullet. I do not remember having seen any Dark Brahma or Silver Penciled Wyandote that was their superior in penciling or color. A novelty, Golden Barred Plymouth Rocks, was represented by two cocks and two hens. One of the cock birds was an especially good one and attracted considerable attention. The females were not so good, being without the discernible barring, and resembling Buff Plymouth Rocks.

In the Golden Wyandottes were found some promising birds, especially in the males. About seventy-five birds were shown in the single classes of White Wyandottes. Some of the best cock birds were in very bad condition and had either to be set back or were not placed at all. I wish every breeder of White Wyandottes could have seen the first hen. She was a true Wyandotte, with dead white plumage, good eye, beak and legs, and was well shown. If any criticism were advanced it would be that she stood a trifle high on legs. Her owner, Mr. Geo. W. Middleton, is a newcomer as an exhibitor, and he is to be heartily congratulated on his success in conditioning this bird, as well as the second hen, which he also owned. The "John W. Taylor Co. Cup" for the best White Wyandotte was easily won by Mr. Middleton's hen. Some fine cockerels and pullets were shown. Among them we noticed some of the Syracuse winners, which were also winners here. Buff Wyandottes were a large class and contained some decidedly good birds. Among the best we might mention the winning cock, hen, and first and second pullet. First and second pullet were exceptionally good in color and fully developed. They were rather long in body and leg. If there was any one class that attracted more attention than another, Columbian Wyandottes was an easy winner. Everywhere I have been I learn of breeders of other varieties who are taking them up and, once tried, the breeder immediately becomes an enthusiast. At this show there were over forty single birds shown and among them the finest bird of this variety that I have yet seen. It was a cockerel owned by Mr. J. E. Farmer, who sold him during the show to August D. Arnold for $75. Mr. Arnold certainly secured a gem in this bird. He was almost perfectly marked in hackle, wing and tail. Owing to a rule which required the exhibitor to make six entries to be eligible, this bird was not awarded the cup for best Columbian Wyandotte, as he otherwise would have been, that prize going to the first prize pullet, a nicely formed bird, pure white in color, with a good hackle, wing and tail.

There was a large class of both single and Rose-comb Rhode Island Reds, with the Rose-combs in the lead, both in numbers and quality. First and second pullets in the Rose-combs were about the equal of the two winning single-comb pullets at Syracuse. The winner here was awarded the cup for the best Rhode Island Red. The Light Brahma and Cochin classes were small. The winning Partridge Cochin hen was a winner for the best Cochin in the show. All the Leghorn classes were well filled with the single-combed Browns in the lead, both in numbers and quality. It is seldom, indeed, that such good females were shown as here. E. N. Norris and Miss Pitchlyn were hot contestants, with the honors well divided. Miss Pitchlyn's winning hen was awarded the cup for the best bird of the variety. In single-comb Whites the cup went to the winning pullet, while the winning cock in Blacks was awarded that honor. The Blacks were decidedly good as a class, being better than either the Whites or the Buffs. Some magnificent Black Minorcas were shown, there being many typical birds with grand color. The winning hen was awarded the cup. Orpingtons were one of the largest classes in the show, all varieties being represented in large numbers and by birds with exceptional quality. In Buffs, the hens and pullets were better than the males. The winning hen was awarded the cup for the best Buff Orpington, and the winning pullet special for the second best. In Blacks were found the best birds in the three classes. I have always contended that the Blacks were the true Orpingtons and in advance of the other varieties so far as shape is concerned. This was as true at Allentown as elsewhere. The birds of this variety were more massive and had better length of feather than the others. All the winners were extra good, especially the winning cock, hen, cockerel and pullet. White Orpingtons are certainly improving and the winners here were better than we usually find. When it comes to a Bantam display I do not know where you would go to find a better one than at this show. Not only were the Game Bantam classes well filled by such exhibitors as Fincke & Thornton, D. G. Witmeyer, A. G. Turner, John Kriener and George Burns, but the ornamental classes, especially the Cochins, the Seabrights, the Brahmas and the White and Black Rosecombs, contained many exceptional birds.

Allentown is famous for her pigeon fanciers and she should be famous as well for the pigeon display made there. Every variety of the many classes of pigeons were shown. It represented the best efforts of the foremost pigeon fanciers, who, as a class, have been the most successful in reaching the goal of perfection with their fancy of all who are engaged in breeding stock or birds.

HOW TO MATE BUFF LEGHORNS.

In mating Buff Leghorns I have learned that first one must select birds of strictly Leghorn type, as type makes the breed. Then comes the color. Color makes the variety. First select birds with solid Golden Buff color throughout if possible, or if not then take one with a slight showing of dark in wings or tail, but no white in any part of his plumage. Then select females as near standard color as possible. If you cannot obtain them with clear color, give the preference to white rather than black in the wings and tail, as this causes the breaking of colors, which allows the Buff to become strengthened, which takes place from this kind of mating. This mating has proven successful with me in more than one instance.

J. W. WOOD.

BROODING.

By James G. Halpin.

FOOD FOR CHICKS.

NEITHER naturally nor artificially incubated chicks should be fed until forty-eight hours old, when they may be given a mixture of two parts rolled oats and one part hard boiled eggs, chopped fine, including the shells. Or they may be fed two parts dry or stale bread and one part hard boiled egg. If the bread is not perfectly sweet it may be toasted, in fact, it is a good plan to toast the bread anyway. A little burnt or scorched bread is often found beneficial in cases of bowel trouble. Another ration could be made of one part granulated milk, two parts bran and one part corn meal. If sweet skim milk is obtainable they may be fed the bran and meal dry and given milk to drink. A great many different mixtures are used in starting chicks, but hard boiled eggs, mixed with some meal or ground food is usually considered the best ration for the first few meals.

Some do not use the dry mash just described, but prefer a scratch food instead. The scratch food, for the first few days, may consist of the following mixture, viz.: one part millet seed, one part kaffir corn, two parts finely cracked wheat, two parts finely cracked corn, and two parts pin head oats. A number of somewhat similar foods are on the market and generally give satisfaction. The scratch food is fed in a thin litter at first, which is gradually increased as the chicks are enabled to secure the food, until it is about four or five inches deep.

NATURAL BROODING.

If the chicks are to be raised with hens a supply of small coops will be needed. The common inverted V-shaped coop is quite satisfactory in warm weather, or even in cold weather, if it is placed in a sheltered location, or in a shed. The sides forming the roof of this coop should be two feet in length at the peak and three feet long from the peak to the ground on the slope and the angle where the two meet should be about 75 degrees. The back should be boarded up tight. The front should be boarded down about one-third of the way from the top and the remainder slatted. This is probably the most common coop in use in this country.

Another very good coop for hens with chicks in cool weather consists of a house three feet six inches by four feet two inches. It should be three feet high in front and two feet six inches in the rear. Hinge the front side on as a door which should have a light in it; then board the remainder tight and cover with building paper. The hen may be confined in a crate within and the floor covered with fine litter. This will prevent the hen covering the chicks with chaff when scratching. As soon as the chicks are a week old the crate can be removed, as the chicks will then be active enough to keep out of the way.

Early chicks can often be kept in an unused stable or building that is well lighted. A fairly constant temperature aids growth and thus gives more satisfactory results. Later in the season, after the cold winds and rains are over, place the hen and chicks in a small coop out of doors. The coops may be used without floors unless rats are troublesome, in which case they will need perfectly solid floors. The coop should be moved every day or two to prevent killing the grass under it, and secure clean premises.

If hawks and crows are troublesome, a run can be made in front of each coop, using inch mesh wire netting when the danger is great. If the danger of loss from this source is not serious use a two-inch mesh netting to allow the chicks to go through and forage outside. The runs should be moved to fresh ground every few days.

A barrel may be converted into coop for housing a hen and her chicks. Dig a hole in the ground large enough to admit one-third of the barrel. Then place the barrel on its side in the hole and put the earth in it, even with or slightly above that outside. The head should be left intact in one end. Remove the other end and drive stakes in the ground before the opening two inches apart, thus confining the hen and allowing the chicks to pass through. Packing boxes may be used in various ways if covered with building paper, but in general it will be found more satisfactory to build good, substantial coops which can be used for several years.

ARTIFICIAL BROODING.

If chicks are to be reared artificially the brooder should be heated for three or four days before it is to be used. In this way it is dried thoroughly and put in good working order before the chicks are entrusted to it. Cover the floor of the brooder with fine sand and then with clean chaff or finely chopped straw. Clean, sweet hay chaff is excellent for this purpose, as the little chicks usually find a great many grass and weed seeds which make excellent food for the first few days.

Care should be exercised not to feed the chicks too heavily at first. This is especially true of brooder chicks, which seem to be lonesome, and will come to meet you every time you go near them. Feel their crops occasionally and if they are not empty

urtain, the fronts are cleaned from a hallway, which has an automatic carrier running the length of the building. The building is covered top, two ends and North side with Felt roofing, making it extremely warm in winter.

The length is 100 ft. by 16 ft. wide, divided in ten compartments 10 ft. by 16 ft.

The poultry houses of the Maple Row Poulry Farm, of which Mr. Ira N. Gaymonds is owner, are most complete and practical.

The half-tone shows the outside runs and front view.

In this most modern and up-to-date building there are 10 windows 4 ft. 6 in. by 3 ft. 9 in., with transoms above 1 ft. by 3 ft. 9 in.

In winter these are covered with canvas and in summer are opened.

The roosts are on the back with nests under them. All the windows have a Southern exposure, partitions of wire netting.

The roosts are like two dry goods boxes back to back with two perches and

withhold food until they are nearly so. Ordinarily young chicks should be fed five times a day, and then only what they will clean up quickly. If any mash food is left at the end of fifteen minutes it should be removed. If too much scratch food is fed at one time be careful to withhold the next feed until the chicks are real hungry. Over-feeding or anything tending to derange the digestive tract may result in serious losses. Keep a constant supply of clean, fresh water and plenty of grit in the form of sharp sand, or broken rock. Charcoal also proves very beneficial when added to the diet. Both grit and charcoal may be obtained from dealers in poultry supplies; there are at least three sizes of each on the market; in ordering, secure the small size for little chicks. Charcoal may be obtained by sifting wood ashes. If brush or rubbish can be burned so that the chicks have access to the bed of ashes, they will soon learn to hunt for charcoal there, and it also serves as an excellent dust bath for them. The mixture of wood ashes and soil seems to suit their wants exactly.

After the chicks are a few days old the hard boiled eggs may gradually be omitted, and a scratch food composed of cracked corn, wheat and pin head oats, substituted. On the average range there is a deficiency of meat and this should be supplied in some form, at least until the chicks are a month old, when they are better able to secure insects. The meat then must be fed according to the amount available on the range. At this stage the following mixture may be used, viz.: two parts hulled or pin head oats, two parts wheat, one part cracked corn, and one part beef scrap, or cracked corn and wheat, morning and night, with a dry mash feed at noon, composed of four parts bran, two parts corn meal and two parts beef scrap or granulated milk. In fact, there are many combinations of food that may be fed at this time. The main thing is to feed food that will supply bone and muscle forming material to build up good, strong, healthy birds. If insects are abundant no meat need be fed, but if green food is lacking it should be supplied.

After the chicks are a month old it is well to allow them to run to self-feed hoppers and help themselves, or to feed them three times a day on equal parts of pin head oats, wheat and cracked corn morning and night. The feed hopper contains a mash food composed of six parts bran, three parts middlings, three parts corn meal, and beef scrap, according to the amount of insects on the range. Beef scrap would seldom be more than three parts and not often more than one part in the above mixture.

The feed hopper may be made at home or can be bought for a small price from most dealers in poultry supplies. It consists of an arrangement which allows the feed to come down no faster than it is eaten out from below. For the end pieces select a board six feet long and eight inches wide, cut it slantingly across through the center so that the slope will be about one foot long, thus furnishing a frame for a sloping top upon which chickens cannot roost. Board up the back or long side of the end pieces and put the bottom in about three inches above the ground. Put a board four inches wide across the front, thus forming a trough with the bottom. Then cut a board to fit into the hopper at an angle of about 45 degrees, being highest in front to deliver the feed in the trough at a point three inches from the back and four inches from the bottom board; enclose the front from this board up and hinge the cover on. If it is desired to allow the chicks to eat mash feed only at certain times, a board can be hinged over the opening of the trough. The dimensions of this self-feeder must be determined by the number of fowls to be fed from it.

BLACK LEGHORN COCKEREL
1st Wilkesbarre, 1906.
Owned by L. W. Pratt, LeRaysville, Pa.

A very good self-feeder used at the Maine Experiment Station is described in Bulletin No. 90, Bureau of Animal Industry, Washington, D. C. "The troughs are from six to ten feet long, with the sides five inches high. The lath slats are two inches apart and the troughs are sixteen inches from floor to roof. The roofs project about two inches at the sides and effectually keep out rain except when high winds prevail. The roof is very easily removed by lifting one end and sliding it endwise on the opposite gable end on which it rests. The trough can then be filled and the roof drawn back into place without lifting it."

During the whole summer, constant watch must be kept to see that the growing pullets have plenty of shade and water. Neglect these two essentials and they will not fill the egg basket the next winter. If trees are not already in the yards plant them the following spring. Use fruit trees to get both shade for protection and fruit for chicken food and market. Plum and apple trees are excellent for this purpose. Peach trees make a more rapid growth and hence furnish shade quicker. If trees are not to be had, a very good shelter can be made by fastening an old door, or something of the kind, on legs about six inches long on one end and one foot on the other. Chickens do not like to take refuge in the house during the day, and something suitable should be provided to protect them from the sun's rays.

PROFITABLE ADVERTISING MEDIUM.

Carlisle, Pa., Sept. 25, '07.

Messrs. L. W. Lott & Co.,
New York, N. Y.

Gentlemen—I have been a subscriber and advertiser of THE AMERICAN FANCIER'S almost from its first issue, and must congratulate you on its improvement along every line. I have always found it a very profitable advertising medium. Wishing you every success I am,

Fraternally,
CHAS. T. CORNMAN.

BLACK LEGHORN COCK
1st & Sp. Scranton, 1907.
Owned by L. W. Pratt, LeRaysville, Pa.

POUGHKEEPSIE FAIR SHOW.

The sixty-sixth annual fair of the Dutchess County Agricultural Society presented to the New York farmers a most attractive, well conducted poultry exhibit.

Mr. Theo. Van Wyck, with an efficient staff, kept the permanent building, with two immense tents, full of birds of all kinds, in capital order, the number allotted to each exhibitor, in place of the exhibitor's name and some other matters were excellent, and the superintendent deserves credit.

The judging was done by Messrs. Drevenstadt, Weed and Bean, and although in some varieties the awards could be criticised, the work was generally good.

The attendance was splendid, and it is surprising what intelligent interest the New York farmers took in the display and how fine a crop of young fanciers this section is producing.

One matter of considerable interest was what was really the best varieties to keep in poultry, and what to do when turkey raising becomes both impossible and unprofitable. Some are going in for ducks, while others have decided on geese. The questions asked as to the best of these showed considerable intelligence and did credit to the inquirers.

Canada came out ahead in geese and will get many orders for stock and eggs, but in ducks they met defeat, for Edwin H. Morris took the blues in Rouens, Aylesburys, East Indians and Indian-runners, and was second to Mr. Briggs in Pekins, leaving little for those across the line. The turkeys were good, but not numerous.

There were large strings, which add to the interest of county fair shows, having a distinct value in bringing the different varieties for comparison and inspection. Of these strings of birds Mr. Geo. Burn was probably the largest, with nearly 500. Mrs. G. A. Turner came next, with a high class team, put down in capital condition by Mr. A. G. Oliver. Mr. F. G. Bean came next, and certainly has some rare good ones of many kinds.

Of the more distinctly specialty displays, Mr. Jonas Hayner's display of Barred Rocks and Edwin H. Morris' exhibit of every branch of the Wyandotte family. Bonnie Brae, under the care of Mr. Briggs, deserves credit for his Leghorn exhibit, and Rowland Story for his Minorcas.

RHODE ISLAND CLUB.

The Rhode Island Red Club of America announces that the 1908 edition of "Red Hen Tales" is now ready for mailing.

This is one of the finest specialty club catalogues gotten out, consisting of about 180 pages. The new features of this edition are photos of the Executive Committee, photos of annual meeting and state cups offered the past two seasons, and the most important of all are four new drawings of Rhode Island Reds. While they are not ideal according to the ideas of all Rhode Island Red breeders, they are by far the best that have yet been produced.

The booklet also contains many new, interesting and instructive articles on Rhode Island Reds.

The membership roll shows over 800 members scattered over 45 states, Alaska, Canada and Hawaii.

Thirty-two of the leading poultry papers of the country are represented in the advertising columns, which will interest those in want of more poultry literature.

Copies of the catalogue may be had by sending ten cents to

E. L. PRICKETT, Sec'y,
Hazardville, Conn.

Pheasants are raised in England most as extensively as fowl. Their meat is in great favor and the feathers bring high prices in the millinery market.

3 Great Books FREE

We have just succeeded in completing, with a book publishing house, one of the greatest contracts for high-class books at EXTREMELY LOW prices yet made. We therefore are now in a position to offer, at a remarkably low figure, such masterpieces as those by the author of the famous "Sherlock Holmes," "Uncle Tom's Cabin," "The Duchess," "Little Men," "East Lynne," "Count of Monte Cristo," etc., etc. Out of the thousands of books at our disposal when we made up the following list, we selected after careful deliberation, the twelve novels which have been found to have proved the most phenomenally popular. For interest-riveting mystery, daring adventure, love and thrilling romance, no twelve greater books have ever been assembled. Any TWO of these books will be sent ABSOLUTELY FREE to all who will mail only a dime, 10 cents, for a big trial subscription to what is generally acknowledged the greatest national monthly published at a popular price, HEARST'S AMERICAN HOME MAGAZINE. This big new 32-page periodical has drawn upon all the almost unlimited resources of the great Hearst organization for its endless variety of startling features. Here you will find the provokingly funny color cartoons, the screamingly odd Happy Hooligan, Buster Brown, And Her Name Was Maud, and the dozen and one other marvellous creations of those master minds of mirth and fun—Opper, Dirks, Bunny, Outcault and all the rest. Of the magazine's great editorial writers, only a few of the dozens upon dozens can here be mentioned. Among these are ELLA WHEELER WILCOX, the most brilliant woman in contemporary American life; DINKELSPIEL—the inimitable—the man who has set all the world a-laughing; MAURICE MAETERLINCK, Belgium's foremost living philosopher and litterateur; CLARA MORRIS, the noted actress, who will write of life on the stage and of the busy world; PROFESSOR GARRETT P. SERVISS, who has magically transformed the mysteries of science into tales of marvellous romance, and BEATRICE FAIRFAX, the most brilliant, cleverest woman who has ever written on love, romance, and the things of the heart. These are but a FEW of the master minds who will contribute regularly to the great new HEARST monthly. For the strange—the bizarre, the unlike, the fascinating—read the brilliantly interesting HEARST'S MAGAZINE. (Read below how you can also get a THIRD book free.)

No. L2. The Crime and the Curse. (Mrs. Southworth.)
No. L17. The Old Red House Among the Mountains.
No. L28. On Her Wedding Morn. (C. Braeme).
No. L37. The Love That Saved Him. (Mrs. Stephens).
No. L27. The Great Hampton Bank Robbery.
No. L48. Sweet Is True Love. ("The Duchess.")
No 34. My Mother's Rival. (Braeme.)
No. 6. Lady Gwendolin's Dream. (Braeme).
No. 26. The Bride of an Hour. (Stephens).
No. 16. Beauty's Marriage. (Braeme).
No. 35. Farmer Holt's Daughter. (Garvice).
No. 25. A Maiden All Forlorn. (Duchess).

Order (by number) and secure FREE ANY TWO of the above excellent high-class novels, by mailing IMMEDIATELY a dime for the greatest national monthly published at a popular price—HEARST'S AMERICAN MAGAZINE—If you remit AT ONCE you may also select an extra THIRD book FREE. Order all three books BY NUMBER and address at once.

When writing advertiser mentin The A. F.

The practical side of the poultry industry is at the present time attracting much attention. Poultry when properly kept yield indeed a handsome profit. In magazines, especially those carrying a column of advertisements of poultry supplies, it is pictured as the only business where capital and experience are unnecessary. This is indeed a very wrong idea. The success of the poultry business lies entirely with one's self. Experience is the great teacher. The beginner should start with a few fowls and first become acquainted with their habits and after the first year will be in a far better position to take up the industry in a broader field.

The purchasing of stock is a most important part of the fancy. At the present time the beginner is puzzled by the many alluring advertisements. It is not always the one who has "swept the deck" that is best able to supply your wants.

Time and again we have seen strains of certain varieties by far more uniform in type and better as a flock than some more successful in the showroom.

It is the small yet proficient breeder that has produced many of the present day "champions." This class has supplied many which have been purchased by the prominent large breeders and afterwards shown successfully.

* * *

The York County Fancier's Association of Dallastown, Pa., will hold their annual exhibition Nov. 25 to 30, 1907. The judging will be done by Emmel & Minnich. For premium list address Secretary Jacob Eberly, Box 12.

* * *

What has become of the A. A. Parker Memorial Trophy? Last year a few friends of the late A. A. Parker, we believe, subscribed for a trophy to be put in competition at Madison Square Garden to be placed on Game Bantams.

We hope that this will not fall through, as all will remember what a true fancier the late Mr. Parker was and what he did for the fancy.

Just who had this in charge we cannot say, but should think it time that something was done to bring this trophy before the Bantam breeders and keep the name of Parker ever before them.

* * *

We hear little of any attempt to invade England again this season with a team of American birds. Although last year some success was gained, it must have been rather discouraging, otherwise it would have been repeated.

* * *

"Jim" Glasgow, manager of the famous Mountain Side Farm, is elated over their success at the recent New York State Fair. On 41 entries the Bantam classes captured 40 firsts and 1 second. Taking everything into consideration, it was certainly a remarkable showing. The Mountain Side Farm has been represented at a number of fairs this season and before long will probably join that class which usually engage a car for the season, also a trunk to hold their ribbons.

THIRD ANNUAL EXHIBIT OF THE QUALITY POULTRY SHOW.

At the last meeting of stockholders of the Scranton Poultry and Pet Stock Association, Inc., all important business relative to the Third Annual Show was completed. The show will be given at the New Music Hall from Dec. 30th. to Jan. 4th., 1908. The cooping of the show will be entrusted to "Spratts Patent, Ltd." The judges will be A. F. Pierce, W. C. Denny, W. J. Stanton and W. T. Wittman.

The premium list committee will give some one hundred cash specials and the ten silver challenge cups or their equivalent cash value, ranging from $50 to $150. Regular prizes, cash specials and cash values placed on cups will amount to nearly $3,000 that the show will pay out in prizes.

The Scranton Poultry and Pet Stock Association has a capital of $5,000 and is incorporated under the laws of Pennsylvania. Among the eighty-five stockholders are men in all walks of life, from the daily wage-earner to the multi-millionaire.

Persons unfamiliar with the financial standing of this association are referred by the association managers to any of the eighteen banks of Scranton, to R. G. Dun & Co., or Bradstreet's Commercial Agency.

The Scranton show, known as "The Quality Poultry Show," was claimed by the judges and many fanciers as the best poultry show ever given in the state of Pennsylvania and the third best show in America. Fanciers who were looking for business at the last show claim that they made no mistake in coming to the land of "Black Diamonds and Coined Gold," as their books were filled with many orders.

A. W. Close, of Scranton, Pa., will act as Secretary. The entries will close on December 18. It is very important that exhibitors get their entries in early, as no more than 2,000 entries will be taken. "The Quality Poultry Show" refused more than 300 birds after entries were closed last year.

THE SPRINGFIELD (MASS.) SHOW.

Great preparations are being made by the Springfield (Mass.) Poultry and Pet Stock Association for the coming Springfield Poultry Show. This will be the fifth event of its kind given by this association, the association being now one of the oldest and the strongest in New England. The activity of the organization has been manifested more than usual this year by a "corn roast" given to the poultrymen, at which Professor Graham, W. H. Card and J. H. Robinson, of Boston, were the speakers, and by the unusually interesting monthly meetings addressed by the leading poultrymen of the United States.

The show will be a score-card show, and will be judged by Atherton, Crangle, Ballou, Tuttle, Northup and Drevenstedt, a line of judges which easily tells the quality of the birds which will be shown. The place where the show will take place, Apollo Hall, 571 Main Street, is the only sufficiently well lighted hall in the city, and has been secured at considerable expense in order to assure a "square deal" in the scoring of the birds.

The officers of this organization are: President, H. C. Page, who is general manager of the street railway systems of Springfield and vicinity; Vice-President, Dr. I. Clark Hill, a physician of good repute; John Aldrich, an attorney, well known in Springfield; G. H. Phelps, an old and experienced breeder; Recording Secretary, H. W. Myrick, a gentleman of favorable reputation; Secretary, H. J. Fiske, of Longmeadow, Mass., manager of the celebrated Bowles Farm and a raiser of Reds and Leghorns.

The premiums this year will be unusually attractive, including several very valuable sweepstakes cups.

* * *

Rhode Island Poultry Association
will hold their 22nd annual exhibition on December 3 to 7, at Providence, R. I. Entries close November 16. Write for premium list to W. I. Brown, Secretary, 6 Exchange Place, Providence, R. I.

* * *

The Paterson N. J., P. P. and P. S. Association expect this year to bring out the largest and best display of poultry in the state of New Jersey. Mr. O. H. Quentin has worked faithfully to bring together the fanciers. Besides giving a fine classification and premium money, the list shows quite a few valuable specials.

* * *

At Sheboygan, Wis., January 13 to 17, 1908, the West Shore Fancier's Association will hold their annual exhibition. James Tucker will judge; E. C. Kuehlmann is Secretary.

* * *

The Rutherford Poultry, Pigeon and Pet Association will hold its eighth annual exhibition at Rutherford, N. J., January 9-11, 1908. Mr. A. A. Winkler, the hustling Secretary, has worked hard to bring a large entry in the poultry and pigeon classes.

* * *

The following gentlemen will judge the poultry at the coming Rochester Show, January 13 to 18, 1908: Messrs. Webb, Quilhot, Drevenstedt, Mann and Guenther.

Auburn, N. Y., will have Messrs. Webb, Quilhot and Davenport place the awards in the poultry section.

On December 3-6, Messrs. Webb and Brace will officiate at the Corfu Poultry Association's sixth annual exhibition.

* * *

The Bradford (Ill.) Poultry Show will take place December 17 to 21. O. L. McCord will Judge. B. D. Phenix is Secretary, to whom all interested in this association should write for premium list.

* * *

The second annual show of the Unadilla Valley P. and P. S. Asso. will be held at New Berlin, N. Y., January 28 to 31, 1908. H. P. Schwab will place the awards. Liberal cash premiums will be given, also many specials, including four silver cups. Premium lists will be ready for mailing about November 15. Mr. R. F. Talbot is Secretary.

* * *

Nashville, Tenn., will hold a poultry show January 6 to 11, 1908. Miller Purvis and J. H. Drevenstedt will judge.

* * *

Scranton, Pa.
Third annual exhibition of the "Quality Poultry Show" of the Scranton Poultry and Pet Stock Association will be given during the week commencing December 30. A. W. Close, Secretary.

* * *

The Paterson Show
will be held on December 4, 5, 6 and 7. Entries close November 19. Write for premium list to O. H. Quentin, Secretary, Clifton, N. J.

THE EASTERN LANGSHAN CLUB.

To the Editor:—

Will you allow me space to announce to the breeders of Langshans and to show secretaries the following offers of the Eastern Langshan Club?

Show secretaries are authorized to insert in their premium lists the following, mailing one list to the undersigned:

THE EASTERN LANGSHAN CLUB offers at every show four fine silk ribbons for the best colored male, best colored female, best shaped male, and best shaped female.

Also State Championship Medals of Bronze, to the person owning and exhibiting in the particular state for which the medal is offered, who gets the highest number of points as per list below, won within the state for which medal is offered, during the season of 1907-08.

Further, Three Sweepstakes Cups for the United States:

First, silver cups; value, $25.
Second, silver cups; value, $10.
Third, silver cups; value, $5.

These cups are offered to the person getting the highest, second and third highest number of points as per list below on Langshans exhibited anywhere in the United States east of the Mississippi during the show season of 1907-08.

RULES OF CONTESTS.

In all competitions the exhibitors must be owners of birds shown or forfeit all winnings.

In all competitions party competing must be a member in good standing of the Eastern Langshan Club at the opening day of the show where competing bird is shown to be counted hereunder.

On State Medal contests, in the states of Mass., Conn., Del., N. H., Vt., and N. J., at least five parties must compete in each state; in the state of R. I., and D. C., two parties, and in all other states ten parties per state.

In the cup contests at least fifty parties must compete; but in case of lesser number cups of proportionate value will be given.

Parties desiring to compete in medal and cup contests, or either of them, must register with the secretary-treasurer of the club before the opening day of the show where winnings are made to be counted in either contest, and receive certificates to be signed by the secretaries of the shows.

All winnings must be certified to the secretary-treasurer of the club before March 1, 1908, at noon, at which time the medal and cup contests close.

SCALE OF POINTS.

First, 5 points; seconds, 4 points; thirds, 3 points; fourths, 2 points; fifths, 1 point. These points to be multiplied by the number of birds shown in competition in the class where winnings are made. Winnings on pens count double single winnings.

Membership fee $1.00, to be sent to secretary-treasurer.

Registration fee is charged simply to cover expense of postage, etc., and is for medal, ten cents, and for cups, twenty-five cents per person registered.

Apply to
John Aldrich, Sec-Treas.,
308 Court Sq. Th. Bldg.,
Springfield, Mass.

Already, Mr. Editor, the success of these contests are assured, so no one need hesitate on that account.

Very truly,
JOHN ALDRICH.

The American Dragoon Club have elected Mr. Robt. Oliphant to judge at their coming annual meet, Madison Square Garden, Dec. 17-21, 1907.

Fifty-seven specials will be competed for, including thirteen cups.

* * *

The Eastern Fantail Club will hold their annual meeting at Madison Square Garden in December.

The following specials will be competed for: Silver Challenge Bowl, value $150, for the best White bred 1907, to be owned and bred by exhibitor.

The Peterson Challenge Cup, for the best White Cock bred 1907, to be won twice before ownership can be claimed. Presented to the club by Dr. Frederick C. Peterson.

The Rowland Challenge Cup, for the best Saddle in the show, to be won twice before ownership can be claimed. Presented to the club by Mr. George E. Rowland.

Two dollars and fifty cents, first, $2, second, and $1, third, on all the 1907 classes, in addition to the regular premium money offered by the New York Poultry, Pigeon and Pet Stock Association.

Silver Medal for the best white owned by one who has never won a first at New York during the Eastern Fantail Club meets 1896 to 1907.

Silver Medal for the best Fantail in the colored classes owned by one who has never won a first in the colored classes during the club meets.

A special club ribbon will be given all winners of cups and medals.

H. M. Pockmann has been selected to place the awards. Messrs. H. H. Horton of Lynchburg, Va., and H. A. Johnson of West Point, N. Y., have applied for membership to the club.

* * *

Brockton, Mass., October 1 to 4 brought together nearly 1,000 pigeons. The quality throughout was very good, especially at this time of the year. The building was ideal, and, penned in Empire coops, gave the hall a most attractive appearance. Locks were provided for all cages, which is another up-to-date method employed. C. A. McClellan judged Pouters and Fantails; George Feather, Jacobins and Orientals; F. W. Gorse, Tumblers and Dragoons; C. F. Forbes, Archangels, Magpies, Helmets and Nuns, H. T. Davenport, Homers.

The silver cups were won by the following: Brookline lofts for Pigmies; W. E. Mills, on Dragoons; J. H. Egger, show Homers; F. T. Sears, exhibition working Homers; Louis Thiel, Clean Leg Tumblers; J. Glynn, Muffed Tumblers; Rankin Bros., Swallows; F. H. Wright, German Toys; A. A. Ashley, Owls, also Oriental Frills; S. G. Duckworth, Fantails, and Geo. H. Trombley, Turbits.

* * *

We understand Richard Whitney will have charge of the pigeon exhibit at the coming Boston Show.

Mr. Whitney is well known in the fancy, having bred and shown Tumblers for years; also as Secretary of the American Pigeon Club he has been before the fanciers. We hope Mr. Whitney will be able to bring together a large entry and put Boston where it was a few years past.

* * *

Mr. T. A. Havemeyer is spoken of as judge of Fantails at the coming Boston Show. We trust the association can induce Mr. Havemeyer to officiate. Having bred and owned many winners in these classes, should make him a most capable judge.

* * *

At the coming Rochester Show the pigeons will be judged by Messrs. Smith and Hill. Both are well known in pigeon circles and should bring to Rochester a large entry of pigeons.

* * *

Mr. F. W. Gilbert's article on "Faking and its Evils" touches many important points in the exhibition of pigeons. Faking has been done to no little extent during the past few seasons. In some instances it has been so glaring the judge easily detected it, but there are many ways which are simply impossible for the judge to make a positive statement, which he must do in order to disqualify a specimen.

* * *

We are indebted to "Pigeons" for a few cuts used in this issue.

* * *

Pheasants Destroy the Bug and Insect Pests.

Many owners of the vast agricultural farms through the West are growing Pheasants in sufficient number to destroy the insects that have done such great damage to their crops.

"FAKING" AND ITS EVILS.

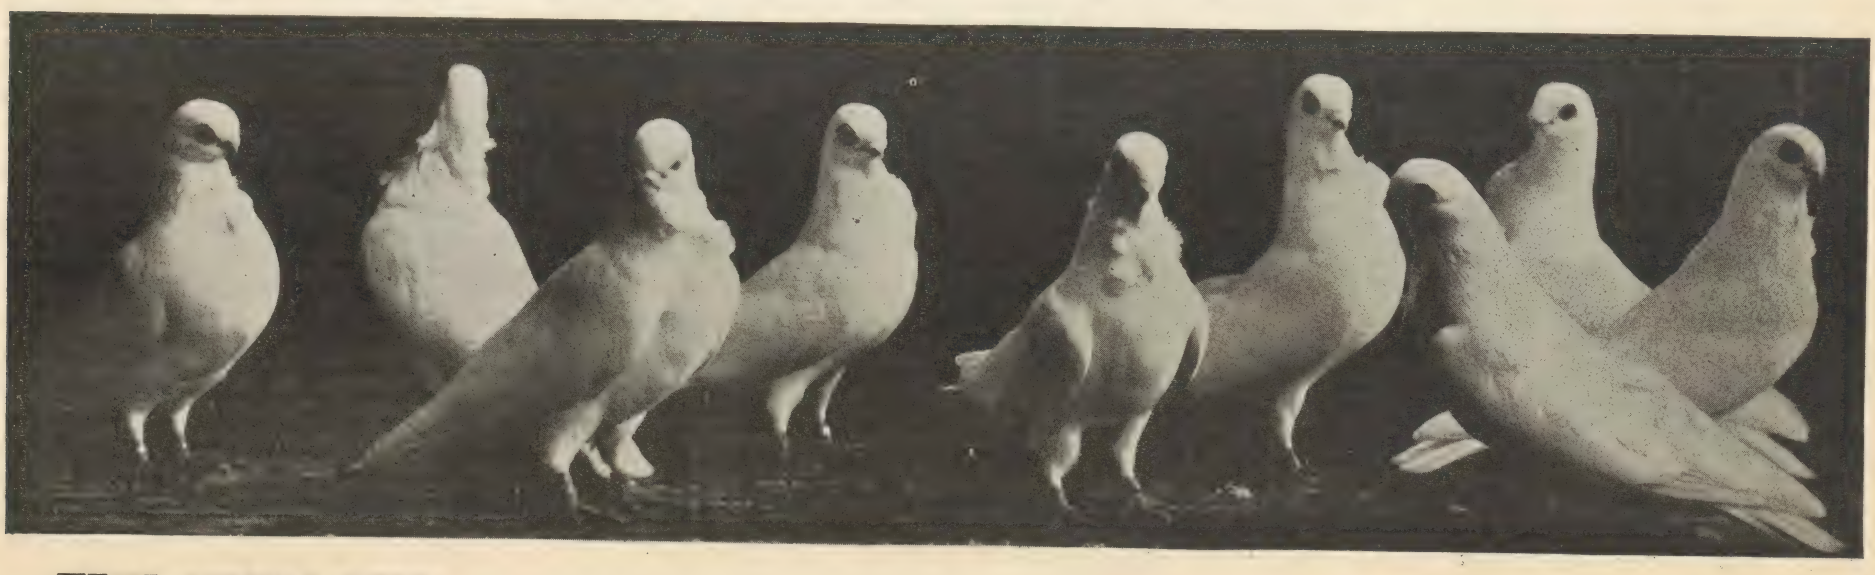
By Frank M. Gilbert.

Editor FANCIER:—

THE above subject is so far-reaching in its ramifications that I doubt if any experienced writer can cover it in a single article.

"Faking" is supposed to be "fixing" a bird in direct disregard of the disqualification clause in almost all standards which disqualifies a bird for "plucking fowl feathers, coloring, splicing, any artificial alteration," yet much as I dislike to say it, the average bird as shown to-day is a "faked" bird, according to the literal acceptance of the above clause.

Suppose one has a good looking Swallow. How easy to pull a foul feather or two in the crest, a few more in the hocks and a few more in the toes, and there is your Swallow—a perfectly marked bird. In saddles of all kinds there is a universal tendency to foul wing butts. These feathers are easily plucked, and the judge has absolutely no means of knowing it. It is only in glaring cases that he can pass a bird. In all my judging, if I found a bird with a bare spot, I passed it. If the bird was a clean marked bird, why the bare spot? In Jacks it is easy to take a bird that "flares" in the hood a little too much and pluck the flared feathers. Little of this is done, however, as a bird that flares at all has no chance with the nice tight-hooded bird.



Nuns, Priests and such birds are prone to have little foul feathers about the eyes, and they usually disappear before a show. Even an Archangel with a peak crest that is not just right can be transformed into a clean peaked bird. In Tumblers, Balds, Beards and Saddles often lose feathers in a strange way just at the "right time." Unfortunately they always come back and the poor purchaser who has bought prize-winners wonders why it is. Personally I don't mind seeing the old-timers go against each other, but it's tough on amateurs.

To give a case: A party was writing me about a grand pair of fans. As it is all over now, I can say that they were a perfect pair, with grand tails and those big cushions and fillers we all like, and about the time I expected to ship he wrote me that he had bought the prize birds (a pair) at a certain big eastern show, and that he hoped I would not be offended at his wanting to buy the "best birds that money would buy." The price he paid was enormous. I simply wrote him that it was all right, but to let me know in about a month how he was getting along. In less than a month he wrote me that he was not suited and would sell me the pair for $20. I answered that I would not have them as a gift. I had seen the stock before and the man who sold them is one of the most expert fakirs in the country. Well, he killed off this amateur, for he quit the fancy in disgust, and has never since entered it.

Reverting to "faking," the fantail is the greatest sufferer. Of course almost anybody can get birds with good style, but then comes the trouble. A good fakir will take a bird with a split center and tie it up. If there is a "cock" or split feather in the center he will cut it off about an inch from the rump, then get a good sound feather from the tail of another bird, cut it at the end, and, using the quick-drying, waterproof cement that dentists use, slip it right over the stub. Now to "spread" the tail. Some cut a piece of buckram, such as milliners use, and, making an oval shield of it, sew it right on to the feathers. This holds a scoop-tail up. Next comes a piece of lead on each side of the tail, taking in, say, three of the lowest feathers, and the work is done. These things are never removed till the last minute and the poor bird thus changed from what nature made him is hurried to the hall, while the fakir hopes and prays that the judge will get at the fans first and judge them before they have a chance to let down. It's a mighty well faked bird that will stand a week's show.

There is no excuse for a judge to put the ribbons on one of these fakes. Wherever he does I always put it down that it is a "stand-in," much as I regret to say it. But don't forget that I invariably stand good for anything I write. If I step on any toes the owner knows mighty well who to look for, and they can look and be ——. Any judge ought to know how to tell a split. Birds are shown in which there is a clean-cut gap right in the top of the rump in the flesh. Such a bird is always a split, all tieing up to the contrary. But where is the judge who blows away the fluff or goes down with his fingers to find whether the bird is fairly shown. Again, what judge looks for the tell-tale marks of the leads on the shoe feathers?

Now I read a whole lot of rot about "lacing" a bird. To lace is not infringing on Nature, and the breeder who does not smooth out and lace his young birds is foolish. I do it every day. If I see a good sound feather being pressed out of position I put it where Nature intended it to grow, and I do it while the bird is young, just as we attend to the teeth of our children. If we plant a perfect little tree and the wind blows it crooked, don't we straighten it? When I am showing I always like to take my birds from the pen to the judging pen, and I smooth each frayed feather as I go. Is this wrong? No more than it is to brush my hair after a railroad trip. The man who has the nerve to ship his pets 500 to 1,000 miles to a show deserves to be given every chance to smooth out his birds. This is not "any artificial alteration," for the smoothed bird after its journey looks as it did on the home loft floor, or as nearly as possible.

WHITE AFRICAN OWLS. **GEO. ECKERT**

Crested Duchess.—Frank Fryer.

The great evil in faking is, first, that it discourages the young exhibitor. He can't hold his own against the tricks of the old-timer, and gives up in disgust. Second, the faked bird is often the worst kind of a duffer, but goes out to some ignorant one at a round price and the latter, after he finds how he has been swindled, is apt to class all fanciers as frauds.

The pigeon judges ought to get together at every big show for a time and agree to pass every faked bird. As I have often said, if a judge can't tell a faked bird, he has no business pasing as a judge. For instance, when a bird "runs through," i. e., puts his head through his tail, the tell-tale "fray" mark is always on both center feathers.

I had a lot of good looking fans before me at a certain show and everyone showed this, and yet the center feathers stood close and firm together. I knew there was something wrong, and went right down to the rump and found a lovely little silk tie on every bird. The whole entry was weak-centered. I "passed" them, and there was a great howl, but I stood pat on the standard. This owner not only faked his birds before the show, but had the nerve to try and fake them through it.

Our reason that there are so few entries in certain classes at certain big eastern shows is because it is well known among the "wise" ones that faked birds will be shown and will win. I am glad to see that we are getting some upright judges who have declared themselves. If each will take a magnifying glass and have it handy the next time he judges, he will see things that will make him sit up and take notice.

BEAUTIFUL 24-Piece GLASSWARE SET FREE

GREATEST OFFER EVER MADE

This beautiful set of "Clear-Cut" glassware consists of 24 pieces of the finest and most beautiful glassware ever made. It is not that cheap "bottle" glassware usually given as a premium, but is such a perfect reproduction of genuine cut glass that it takes an expert to tell which is the real and which is the reproduction. "Clear-Cut" glassware is made by a large and well known manufacturer of exclusive glassware, by a special secret process which distinguishes it from all other makes of glassware. The pattern herewith shown is the "Oneata," an exact reproduction of one of the most famous cut glass patterns ever designed. It is as clear as crystal, very heavy, sparkles, scintilates and casts a multitude of the most dazzling hues you ever beheld—just the same as real cut glass.

Star Mfg. Co. Chicago.

THIS IS OUR OFFER

Send No Money—simply your name and address and we will send you 12 "Gems of Art" (exceedingly beautiful pictures). These twelve pictures you distribute among your friends, collecting 25c for each. SAVE THE CALVES

Are your calves troubled with stomach and bowel disorders? Give them **Calves' Cordial.** It's a soothing astringent that allays inflammation and prevents Scours. When forcing for veal it permits a heavier grain ration than can be fed without it.

CALVES' CORDIAL SAVED 15 CALVES FOR ONE MAN

"We had 15 fine calves that took to scouring. We could not cure them and were about to kill them when I tried **Calves' Cordial.** We fed it twice and the calves looked better. Two feeds more entirely relieved them." C. R. Hoyt & Son, Lyndon Center, Vt.

We have hundreds of just such letters. Ask your dealer for **Calves' Cordial.** He will refund money if it disappoints you. Our guarantee on every package. Send us your name and one neighbor's who keeps cows, stating how many each have, and we will send our Booklet, "Cow Troubles," also Goldine Cow Watch Charm Free while they last.

"FEED, TEN CENTS A BUSHEL"

Is your main feed for producing eggs and growing young stock costing you more than 10 to 15 cents a bushel. If so, you want my new book, title, ***Profits in Poultry Keeping Solved,*** which tells you how to make this great feed and gives you every detail in laying out and running a poultry plant. Gives you my life time experience. You can save $25 a year on every 100 hens you feed as well as increase your egg yield 30 to 40 per cent. No mashes under my new system. I have put hundreds of plants on a paying basis and can yours. Write to-day and stop that big feed bill. Circulars and testimonials free. My second edition of 3000 copies now ready.

The American Fancier

VOL. XXVII NEW YORK CITY, NOVEMBER 15, 1907 No. 691

THE EMBDEN GOOSE.

By

THEO F. JAGER.

THE six breeds of geese known to us as Standard breeds may be successfully divided into heavy weights, to which Embdens, Toulouse and Africans belong, and lightweights or ornamentals, embracing the Chinese, Wilds and Egyptians. The latter spiting the fact, that Rhode Island followed by other sections of New England, has made it possible through crossing the Wilds with some of the heavier varieties and in selling this so-called "Mongrel" as the very best that can be had in the goose market line, have never attained any prominence as real good market producers. If we want market birds we must stick to the heavy weights. If we desire the best returns from meat and feathers, we must select Embdens.

The Standard weight of twenty pounds to the old gander and eighteen pounds to the goose with two pounds less for birds less than one year old, is often exceeded with age in well kept birds. I had occasion a few weeks ago, while visiting a dealer near Hamburg in Germany, to see a flock of Embdens, probably numbering sixty odd birds, that had been selected from thousands imported from the far eastern sections, that would average around thirty-five pounds apiece. A few monster males in that bunch came close to forty-seven pounds. I cite this simply to show what can be done with care and through proper selection of breeders.

Embdens, or at least a large white goose, was known to the ancient Jews who classed them as a cousin to their swans. Penelope told to her maids a dream, where she fed wheat in water to white geese and that she delighted to watch them in their antics to get at the grain. Rome has to thank a flock of white geese for not being captured by the Gauls in the year 368 B. C. Lucretius in relating this incident, attributes it to the sense of smell of the birds in saying: "The white goose, the preserver of the Citadel of the descendants of Romulus, perceived at a great distance the odor of the human race." The later history, that we can substantiate more fully, is to the effect, that this breed was bred to its perfection and in great numbers in and near the city of Embden, a small place in western Germany and the goose from Embden was soon called the Embden Goose.

Doubts exist as to what varieties furnished blood to make them. Old writers allow the white fronted or laughing goose all the claim for having produced the Embdens through selection in picking the birds showing the most white until an all white bird was the result. Another version is, that the gray lagged goose (Anser Palustris) crossed with the bean goose (Anser Ferus) should have the credit of production. It is folly for us at this late day to try to fathom, what is clouded in ages, but I for one can not help but incline to the view, that the white fronted goose has her age as a breed as well as the ease with which all white birds could be produced out of her in her favor.

For mating Embdens I cannot improve on what I once wrote: "Select for a gander a bird that is from two to five years old, from parent stock known for hardiness, activity, and general commendable qualities; a bird that has never been hampered with any surplus amount of fat, or that ever was compelled to await a night with an empty craw. You must pick a bird that has been kept growing ever since he saw daylight and which was never badly in need of anything. Let the eyes be large and bright-blue, indicating vigor of the breeder.

The neck must be rather long and massive, without being clumsy. You like to see muscles there—strong and free from fat. The back should be slightly arched, and the breast round, deep and full. The body should be almost square, very compact, and deep—in older specimens almost touching the ground. The bill should be orange in color (flesh colored spots are objectionable), nicely rounded, and, considering the size of the bird, somewhat pointed. The shanks must be short and stout, in order to be able to carry the weight they are intended for; thigs strong and well proportioned, toes straight; in short, the whole leg must indicate massiveness and weight carrying characteristics. The plumage should be pure white.

The breeding gander should be watchful and observing. Beware of dull members in selecting breeders. Pick the bird that is anxious to chase the dog away if he should dare to draw to near and you have the bird that will produce hatchable eggs for you. This much for the gander, now to the goose.

Let her be of not too closely related blood. Pick the neatest, the cleanest birds—for cleanliness will indicate to you the healthiest and best breeding specimens. A weak or ailing bird will always be in need of an ablution. Bear this in mind. Read over the requirements as stated to be desirable for ganders, and you read the points a breeder ought to seek in his females. If you can, pick the most compact—the geese with medium long necks and broad fronts; they are good ones to go with ganders described above."

The above requirements fit the standard in vogue here, especially is this true in regard to color of bill. A breeder is able to make what he wants, if he has knowledge and persistency, even if it goes contrary to some natural laws and inbred characteristics. It is so with the bill of the Embdens. The old genuine Embdens, as bred in Germany, had all a flesh colored bill, inclining to have a purple shade. These colors are still considered best over there; and as a matter of fact, the largest birds, the birds that are the best market producers, have flesh colored bills; and for us to follow the standard now seems like granting a premium on a bird carrying less weight. However, time and careful selection will remedy this, and I have no fear that years hence our orange-billed Embdens will equal in paying qualities the flesh colored billed Embdens of Europe.

In mating birds, remember that they cannot be mated too early. Late summer or early fall is best. Let the flock get that home-like feeling. December and January matings can be said to carry only seventy-five per cent. February matings only fifty per cent. of success with them.

The owner of a meadow or waste land, that produces unharvestable grass cannot do better than to stock it with a flock of geese. They are frugal in demanding grain, can stand hardships and are satisfied in a shelter, open to the south, that keeps the coldest winds and rain out. I say with Mrs. Wolcott: "If you wish to turn grass into greenbacks, raise geese."

JAMESTOWN EXPOSITION.

By

JUDGE W. C. DENNY.

THE Jamestown Poultry Show was, in many respects, one of the most notable exhibitions of poultry that has ever been assembled at any one exhibit.

Thirty-three States were represented by 200 exhibitors, and nearly 2,500 birds. It is seldom that there is such a wealth of numbers or quality in the classes as were shown here, and, had the exhibitors of such varieties as Hamburgs, Polish, the French varieties, Dorkings, Games, Bantams and others made up the usual entry found at the winter shows, there is no telling what figure the entry would have reached. In some ways it was fortunate that they did not partake of the advantage of exhibiting, for the great Convention Hall was taxed to its utmost and only skilful planning by T. Farrar Rackham and W. A. Smith, who were in charge of Spratt's Patent cooping, the show, permitted the cooping on the floor and stage. The Convention Hall, a large, well-lighted building, is the best structure that has ever been given to the poultry men at an exhibition. Practically every aisle was well lighted and one coop as good as another so far as light was concerned.

Supt. Murkin and Assistants Hewes and Doake, worked faithfully beforehand to make the show a huge success and they should feel gratified over the results. All the classes in the American varieties were filled, and the best breeders represented, either by their own birds, or in the hands of others. This was true also of Brown and White Leghorns among which there were many gems, and it would be difficult to mention any one class or variety as being better or more interesting than others.

The express accommodations were a good example of indifference and discourtesy on the part of any company that has a monopoly at such a place. All the birds were delivered by rival express companies to Norfolk by the Adams Express Company, who did not seem to appreciate the importance of prompt delivery, or make any efforts to carry out the desires of the shipper. One delivery a day from Norfolk was all that they would make, so that birds that reached Norfolk during the evening would not be delivered at the Exposition Grounds until the afternoon of the day following. This delayed the finishing of the cooping of the birds, which began on Tuesday A. M., until Thursday, when the judging began. J. H. Drevenstedt, W. S. Russell, W. C. Denny, F. J. Marshall, Geo. Ewald, R. E. Jones, A. F. Kummer and T. Reid Parrish did the judging, which was completed Friday noon. Speaking generally, the awards were accepted with very little dissatisfaction, excepting the difference of opinion there is bound to be where the competition is hot, which is a compliment both to the judges and to the exhibitors.

One of the unfortunate incidents was the smothering of seven grand Black Orpingtons belonging to Mr. C. S. Byers. The birds, valued at more than $1,000 by Mr. Byers, were dead on their arrival at Convention Hall. Perhaps no one took the matter more calmly than Mr. Byers, who arrived the next morning. Only two birds were saved, a cock and a cockerel, and both grand birds were awarded first in their classes.

Barred Plymouth Rocks were one of the leading classes, and brought out the best breeders from the east and south. Cocks and cockerels were the strongest classes and the winners here have been winners at the New York and other leading shows, and will undoubtedly be seen in the show room as winners again, this winter.

First cock, good type and sharp barring, poor comb, good beak and legs, an easy winner. Second cock about the same type, not so good in comb or condition. Third, fails in shape of breast and color of back and wings, better head than either first or second. Fourth, larger than the others, fails badly in shape of breast, and rather light in color. Fifth, fine color, too short in thigh and main tail feathers were absent through the moult.

The winning hens were rather too open barred to fill the prevailing fashion. First hen very coarse in barring and not as clean cut in this respect as should be. Second hen, good shape, rather smutty in color. Third, better color than either of the winners and with good shape. Fourth, entirely too light. Fifth, best hen that I have seen this year, grand shape with clean-cut barring all over. First cockerel, a well developed bird and with good head. Second, lighter in color, but same in size and shape, not so good in head, but better color. Third, not as good in shape or color, but with better head, beak and legs. Fourth, a very stylish bird, with fine shape and head, rather uneven in color of back and wings. Fifth, very young, but very promising, also sharp barring all over and very good shape. First pullet, good all over, barring being particularly fine, being sharp and down to the skin, grand in beak and good legs. Second, another good one, but not so sharp in barring. Third, not as sharp in color as either of the winners, and lacking in their style as well. Fourth, better in color than third, but gone by.

White Rocks. First cock a massive bird in nearly perfect condition, lacks in shape of breast, a trifle pale in eye, and with only a fair comb. Second, especially good in shape of breast and back, a little short in body, and lacks a well spread tail; better color than the winner. Third, rather narrow and fails in shape of breast.. Is good, however, in length of back and body, and very good tail. Appears to be a trifle out of condition. Fourth, a trifle narrow all over, and lacking somewhat in shape of breast. Fifth, one of the best shaped birds in the class; tail rather short and is off in color of leg. First hen was in good conditions and well shown, particularly fine in head points, equal of the winner in shape. Third, rather poor in type, having the appearance of being loose feathered, and carried a pinched tail. Fourth and fifth, rather short in body and not so good in color as the winners. First cockerel, well finished and well shown, low comb but serrations rather uneven, lacks in shape of breast. Second, not fully matured, but promises well. Third, not as good in color as either of the other two. Fourth, like second, is undeveloped, but will make a winner later. Fifth, quite well developed, but lacks some in shape of breast. First pullet, a grand, easy winner, shown in the pink of condition, a Plymouth Rock in shape, and pure white in color, with good, head, beak and legs. Second, younger, not so well developed, but of the same quality. Third, not so good in shape of back, nor color of legs. Fourth and fifth, also good ones, but not so well developed.

Bluff Rocks. First cock, a good winner, being of a beautiful, even shade throughout, good shape, and, with another month's time would take a marvel to beat him. Second, not as rich in surface color, better in color of tail, which is carried rather low. Color of legs might have been better. Third, a deeper buff, but very rich, a little dark in primaries, better head than either of the winners, fails in shape of breast, and legs. Fourth, a beautiful golden buff all over, good Rock type, but rather small in frame. Fifth, solid buff throughout, but lacks richness on back and saddle, carries tail too erect, comb had been injured. First hen, best that has ever been shown in America, a beautiful shade throughout, good head and grand shape. Might be used as a model for Standard Plymouth Rock type. Second, even color throughout, but not as rich as might be, fine head, and good legs. Third, poor comb and shape of back and tail, very even color. Fourth and fifth very much alike, fourth being the richer in color of the two. First cockerel, a gem, rich and beautiful in color nearly solid tail and wings. Is a grand Rock, being strong in every section. His tail is well spread, a very desirable feature. Mr. Poley has named him "Powhatan," after Chief Powhatan, father of Pocahontas, the Indian famous for saving John Smith's life. Second, another good one, lacking only a trifle in shape of breast and tail. Third, not as good as he will be, undeveloped, hackle a trifle lighter than back and wings. Fourth, well developed and very handsome, fails badly in comb. Fifth, not matured as well as the others, promises good in shape, fails in color of eye. First pullet shown at the right time, being well developed, and very smooth and even in color, has good Rock type, though might be improved in shape of tail and comb, the heel of which had been torn away. Second, not developed, but very even and of one shade all over, has good type and later on will make a hard one to beat. Third, very much lighter. Fourth, needs more time to develop, but could hardly be improved on in color. Fifth, past her best, had evidently been laying.

In the White Wyandottes the winners were the equal of those at New York and Boston. First cock and cockerel looked very much as though they might be father and son and were easy winners. First hen, Wyandottes all over, tail not fully developed, beautiful in color, head points, beak and legs. First pullet a gem, with beautiful lines of first hen, a trifle coarse in head, otherwise hard to improve except in eye; one of the best that has been shown. Second, another good one, plumage a trifle green and not as well bleached as winner. Same criticism can be made of head.

Silver and Golden Wyandottes largest classes in numbers and quality with the exception of one or two of the females. Buff Wyandottes rather small in number of birds shown, but with exceptional quality, particularly the winning cock and hen, first and second cockerels and the winning pullets. A large class of Columbians, first cock and nice bird with good markings. First and second hens very good in type and color. Did not appreciate first or second cockerels, the first being too yellow, with white in the tail. Second, instead of black, being a brown. First and second pullets good in type and markings. First cockerel at head of first pen was the exceptional bird of the class.

AWARDS.

BARRED PLYMOUTH ROCKS — James Corfman, 1st H., 5th Ckl. Jos. Winkler, 4th Ckl., 2d H. Lambert Poultry Farm, 4th Ckl., 4th H., 3rd pen. Grove Hill Poul. Yards, 1st 2d, 3d, 5th, C., 5th, H. 1st, 2d, 3d, Ckls., 1st, 3rd, 4th, 5th Pul., 2nd pen. Henry D. Riley, 2nd Pul., 5th pen.

COLUMBIAN PLYMOUTH ROCKS—Alden & Riley, 1st, 2nd Pul. DeGraff Poultry Yard, 1st, H.

$200.00

IN SIX MONTHS FROM 20 HENS.

To the average poultryman that would seem impossible, and when we tell you that we have actually done a $500.00 poultry business with 20 hens on a corner in the city garden 30 feet wide by 40 feet long we are simply stating facts.

It would not be possible to get such returns by any of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new PHILO SYSTEM is adopted.

The Philo System is Unlike All Other Ways of Keeping Poultry

and in many respects is just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard of results that are hard to believe without seeing, however, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers Every Detail and Branch of Poultry Work.

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work, and any man, or woman that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks.

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing here, three cents per pound above the highest market price.

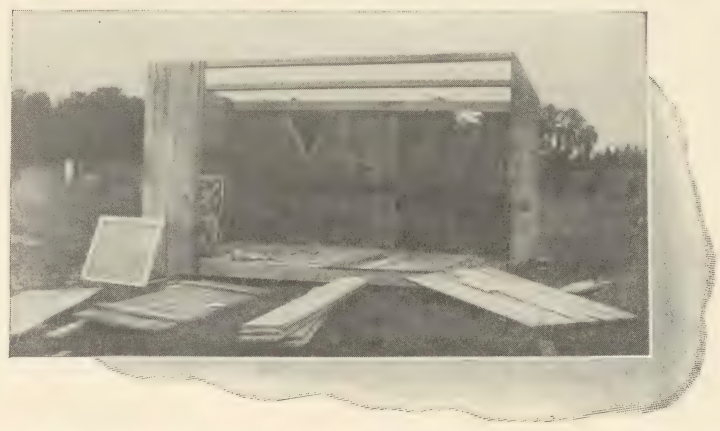
Our Six Months Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird No green cut bone of any description is fed and the food used is inexpensive as compared with food others are using.

Our new book, the ***Philo System of Progressive Poultry Keeping*** gives full particulars regarding these wonderful discoveries with simple, easy to understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

It also tells how to make a brooder for 25 cents that will automatically keep all lice off the chickens, or kill any that may be on them when put in the brooder.

This book and the right to use all patents in connection with the work will be furnished free for a limited time with a years subscription to the Poultry Review. Mail us 50 cents to day and get a copy of the first edition published.



POULTRY REVIEW,

47 Third St, Elmira, N. Y.

A PIANO BOX POULTRY HOUSE.

By W. R. Fishel, Hope, Ind.

One of the cheapest and most convenient poultry houses is one constructed out of piano boxes. Secure two upright piano boxes, also six pieces of timber 2x4 inches, ten feet long, one hundred feet of ship-lap siding, 16 feet long. Carefully take the boxes apart, leaving backs and ends and bottoms altogether as cleated; lay three of the 2x4 pieces of timber on the ground edgeways; take the two backs of the boxes, making the bottom of the house; the four ends of the boxes use for the back wall of the house; the fronts of the boxes will make the ends of the house, while the tops and bottoms of the boxes can be used for the front of the house. Also secure one sash of six 8x10 glass, placing it in the front of the house near the floor. Door is cut out of the

front, near the roof, and covered with muslin and netting. This is for ventilation, and gives the poultry plenty of fresh air. This house can be lined on outside with good roofing paper, same as put on the roof, and you have a house that no birds will get frosted in. The ship-lap is used for the roof, then is covered with good roofing of some good material. The illustrations herewith show the manner of building this house, and how it looks when completed. This house can be built for $7.00, and accommodates 50 young birds, or 25 full grown cockerels. The roost is made the entire length of house along the back.

RECIPE FOR WHITEWASH SPRAY.

For forty years the United States Government has been using on all its forts and lighthouses whitewash prepared according to the following formula. It is claimed that, made in this way, the wash will stick better and retain its brilliancy longer and better than any other, and that it is not easily affected by rain or weather. Of course, it is necessary to strain the material carefully before applying through a pump, else more or less trouble will result from the clogging of the nozzle, but with ordinary care at the start, no inconvenience will be experienced.

Half a bushel of unslacked lime, slack with warm water, cover it during the process to keep in the steam; strain the liquid through a fine sieve or strainer; add a pack of salt previously well dissolved in warm water, three pounds of ground rice boiled to a thin paste and stirred in boiling hot; half pound of powdered Spanish whiting and a pound of glue which has been previously dissolved over a slow fire, and add five gallons of hot water to the mixture, stir well and let it stand for a few days, covered from the dirt. Strain carefully and apply with a spray pump. It should be put on hot. There is nothing that can compare with it for outside or inside work, and it retains its brilliancy for many years. Coloring matter may be put in and made of any shade. Spanish brown, yellow ochre or common clay.—Exchange.

3 Great Books FREE

We have just succeeded in completing, with a book publishing house, one of the greatest contracts for high-class books at EXTREMELY LOW prices yet made. We therefore are now in a position to offer, at a remarkably low figure, such masterpieces as those by the author of the famous "Sherlock Holmes," "Uncle Tom's Cabin," "The Duchess," "Little Men," "East Lynne," "Count of Monte Cristo," etc., etc. Out of the thousands of books at our disposal when we made up the following list, we selected after careful deliberation, the twelve novels which have been found to have proved the most phenomenally popular. For interest riveting mystery, daring adventure, love and thrilling romance, no twelve greater books have ever been assembled. Any TWO of these books will be sent ABSOLUTELY FREE to all who will mail only a dime, 10 cents, for a big trial subscription to what is generally acknowledged the greatest national monthly published at a popular price, HEARST'S AMERICAN HOME MAGAZINE. This big new 32-page periodical has drawn upon all the almost unlimited resources of the great Hearst organization for its endless variety of startling features. Here you will find the provokingly funny color cartoons, the screamingly odd Happy Hooligan, Buster Brown, And Her Name Was Maud, and the dozen and one other marvellous creations of those master minds of mirth and fun—Opper, Dirks, Bunny, Outcault and all the rest. Of the magazine's great editorial writers, only a few of the dozens upon dozens can here be mentioned. Among these are ELLA WHEELER WILCOX, the most brilliant woman in contemporary American life; DINKELSPIEL—the inimitable—the man who has set all the world a-laughing; MAURICE MAETERLINCK, Belgium's foremost living philosopher and litterateur; CLARA MORRIS, the noted actress, who will write of life on the stage and of the busy world; PROFESSOR GARRETT P. SERVISS, who has magically transformed the mysteries of science into tales of marvellous romance, and BEATRICE FAIRFAX, the most brilliant, cleverest woman who has ever written on love, romance, and the things of the heart. These are but a FEW of the master minds who will contribute regularly to the great new HEARST monthly. For the strange—the bizarre, the unlike, the fascinating—read the brilliantly interesting HEARST'S MAGAZINE. (Read below how you can also get a THIRD book free.)

No. L2. The Crime and the Curse. (Mrs. Southworth.)
No. L17. The Old Red House Among the Mountains.
No. L28. On Her Wedding Morn. (C. Braeme).
No. L37. The Love That Saved Him. (Mrs. Stephens).
No. L27. The Great Hampton Bank Robbery.
No. L48. Sweet Is True Love. ("The Duchess.")
No 34. My Mother's Rival. (Braeme.)
No. 6. Lady Gwendolin's Dream. (Braeme).
No. 26. The Bride of an Hour. (Stephens).
No. 16. Beauty's Marriage. (Braeme).
No. 35. Farmer Holt's Daughter. (Garvice).
No. 25. A Maiden All Forlorn. (Duchess).

Order (by number) and secure FREE ANY TWO of the above excellent high-class novels, by mailing IMMEDIATELY a dime for the greatest national monthly published at a popular price—HEARST'S AMERICAN MAGAZINE—if you remit AT ONCE you may also select an extra THIRD book FREE. Order all three books BY NUMBER and address at once.

EGG MAKING

is a hen's natural work. Cut bone is the raw material she needs to make her lay an egg a day. A **CROWN BONE CUTTER** will prepare the food from scrap bones quickly, easily. Write for catalog—tells about the Crown.

Wilson Bros., Box 647, Easton, Pa.

If you cannot supply birds just as you describe them, then do not advertise.

Some unscrupulous breeders advertise their winnings of the leading poultry exhibitions and not having enough stock to fill these orders, buy stock of no merit from other breeders. How is the purchaser to know that stock or eggs advertised as from a winning strain are really from such.

Every breeder who by this means defrauds a customer should be exposed and debarred from the show room, thereby depriving him of his advertisement's drawing card—his winnings.

Whenever we believe a breeder is practising this "fake" method, we will exert every possible effort to obtain proof and if we do we will see that he is prevented from entering his birds for competition at any show.

It matters not what a man is advertising, it should be his aim to so conduct things that he secures the goodwill as well as the dollar of his customer. Honesty may mean a little less profit on the first sale, but it will lead to future ones.

For one dishonest poultry dealer you will find one hundred honest ones and experience will show you that there is no class of men more straightforward than the breeder of poultry.

* * *

It is not so much the breed as the strain that should be considered. The Poultry Shows are of great educational value to all breeders of pure bred stock and whether one has years of experience or is just starting, he can learn a great deal. Even the poultry judges don't know it all, although some show secretaries seem to think otherwise and employ one man to judge from 2,000 to 3,500 fowl in a day. If the associations will not give enough money to secure a good judge, it is better to employ different local breeders having experience in raising the breed to be judged than to employ a cheap "Professional?" Judge for all the classes.

* * *

The majority of poultry association secretaries in the United States and Canada read this paper and we hope the foregoing will set some of them thinking. We have written this for their good and with no unfriendly intent, for our feeling toward them is most friendly. They have been very liberal in spending money with us for advertising their Poultry Associations and this issue carries the show ads. of the following, all of which have been paid and not inserted for exchange space: Scranton, Pa.; Providence, R. I.; Woonsocket, R. I.; Johnstown, N. Y.; Paterson, N. J.; Portland, Maine; Springfield, Mass. and in previous issues we had Allentown, Syracuse, and others and many more have contracted for future insertions.

* * *

We notice a new ruling of the A. P. A.: "All complaints relative to a licensed judge while employed professionally can be made to the secretary." Just what action will be taken we cannot say.

Judges hereafter will have to be most careful. Whether a member can make a complaint during the entire exhibition or only at the time of judging will be settled later.

Detectives will probably be employed to watch the judges after leaving the exhibition hall.

This is a step in the right direction, and although hard on those who have been licensed it has its advantages, which should make the poultry judge a most perfect man.

* * *

Madison Square Garden during the **week of December** 17th to 21st will have the greatest collection of poultry yet seen in this country.

The Association reserves the right to reject all entries over 4,000, therefore those who expect to exhibit should make entries as early as possible. All entries close December 2d.

The list of judges in the poultry section number nineteen. All are well-known to the fancy and capable of handling their respective classes.

* * *

In looking over the list of specials offered by the different Specialty Clubs, the Exhibition Game and Game Banatam Club is conspicuous by its absence.

Whether this club will offer any specials at New York we cannot learn. Where has the hustling secretary of one year ago disappeared?

* * *

Mr. Philander Williams, who has been called "the father of poultry culture in America," has sold his place at Taunton, Mass., and is now identified with Frank E. Tyler, of Randolph, Mass.

Messrs. Williams & Tyler will breed and exhibit White Plymouth Rocks, Rhode Island Reds, Light and Dark Brahmas.

* * *

Columbus, Ohio, will hold its annual exhibition February 10-15, 1908. The Ohio Branch of the American Poultry Association will hold its meeting in connection with this show. Mr. Chas. E. Cram, Secretary, Carey, Ohio.

* * *

The Silver Loving Cup which is offered annually by the American Polish Club for competition by its members in the State of New York will be up at Buffalo December 16th to 19th, 1907, and will be placed on the best display of any one variety. * * * *

Breeders of Polish who are not members of the American Polish Club are requested to join the club by sending to M. V. Caldwell, Secretary and Treasurer, Leshor, Ohio, $1.00.

The officers of the club in New York State are Chas. L. Seely, President; B. F. Bryant, General Vice President, and Geo. E. Winters, Vice President.

* * *

In the Auditorium at **Lincoln, Nebr.,** January 20 to 25th, 1908, will be held the Madison Square Garden Paultry Show of the West.

Over $500 in specials will be competed for in the different classes.

The White Wyandotte Club offers $100 for specials. Mr. M. M. Johnson has offered over $100 in specials in the different classes. L. P. Ludden, Lincoln, Nebr., is Secretary.

* * *

The National Columbian Wyandotte Club will hold its annual meeting at Madison Square Garden, December 19th, 1907. Ed. McIntosh, Secretary.

On other pages in this issue we publish Judge Denny's report of the Jamestown Exposition with a list of awards. Within the past few days we have received a number of letters and complaints in reference to the Jamestown Poultry Exhibit. Our sympathies are extended to the management as the express companies were slow in delivering, and although the judging was delayed it was quickly handled after being started. An exhibition of this size should have drawn at least 2,000 pigeon entries, but it only had a few and so few that we are ashamed to publish the number. Any one desiring further information can obtain it by mail by writing this publication.

As our columns are open to all, we herewith publish two letters which arrived in the same mail.

Munhall, Pa., Nov. 9, 1907.
Leonard W. Lott & Co.,
New York, N. Y.

Gentlemen— would like to ask you a favor if I am not asking you too much. I had one pair of S. C. B. Leghorns and one pair of R. C. B. Leghorns at the Jamestown Exposition, and I have the birds back all O. K., but I do not know and cannot find out if they won or not. I paid for a catalogue, but it never came. Now if you can inform me if or not my birds won I would be a thousand times obliged to you.

Very respectfully,
ALBERT YODER.

(Editor's Note—No printer could be found who could print the catalogue in time.)

Morris Plains, N. J., Nov. 11, 1907.
American Fancier,
New York City.

Dear Sir—I would like to ask a favor of you. I have lost two birds at the Jamestown Exposition, or after the Poultry Show was over, as they never came back. I had five entries, three Anconas and one Silver Seabright Bantam hen and one White Frizzle Pullet. All sent by United States Express. The Anconas were in one box, and came back alright. But the Bantam Hen and Frizzle Pullet were in another box and have never come back. And would like you to advertise it in your paper.

Yours respectfully,
FRANK W. MAINS.

MAINE STATE POULTRY ASSOCIATION.

Seventh Annual Show will be held December 10th to 13th at Portland, Maine. Write to A. L. Merrill, Secretary, at Auburn, Maine, for premium list, and remember that the "Maine boys" bride themselves on two things —paying large premiums and giving strangers the glad hand and a warm welcome. For this season the Secretary and others have worked hard to make the show a great success and the poultry men should show their appreciation by entering their birds.

* * *

Through an error in the copy of awards at Mineola, we credited Robt. Seaman as first instead of Rev. Wm. P. Macky, on Pekin Ducks.

* * *

Warren Poultry Show will be held at Warren, Pa., December 16th to 20th, 1906.

* * *

The fifth annual exhibition of the Queen City Poultry Association will be held December 31, 1907, to January 3, 1908, at Manchester, N. H.

* * *

HOUDAN BREEDERS ATTENTION!

The annual exhibit and club meeting of the National Houdan Club will be held at next Boston show, January, 1908.

Mr. T. F. Rigg, the noted Houdan judge and breeder will place the awards.

I make a personal appeal to all lovers of our grand old utility breed to send their best birds to next Boston show. A man will be in attendance the entire week to give the Houdan class his special attention.

The Boston Association offers the beautiful $100 silver challenge cup and $25 in gold; National Houdan Club offers $50 in gold, also club ribbons for best crested Houdan; best shaped Houdan; best colored Houdan, best exhibit of Houdans. There will be $100 in cash up in addition to the above specials on this breed.

Join the National Houdan Club and help put this beautiful and intensely useful breed back where it belongs—at the top.

E. F. McAvoy, Jr., Schenectady, N. Y., Secretary.

NATIONAL RED FEATHER CLUB.

Club Specials—These will consist of a handsome ribbon, with Buckeye topbar and center medallion overhanging, all done in gold and Buckeye brown. This is one of the finest ribbon Specials ever offered, and will be given as the HIGHEST AWARD to the CLUB MEMBER exhibiting the HIGHEST SCORING pair of BUCKEYES at the show offering the Special as a premium. One ribbon will be furnished to each Club Member, who may place same with any show at which they wish to exhibit.

Remember ONE Special FREE to each Club Member.

Breeders of Buckeyes who are not Club Members, can obtain a Special by joining the Club at once, sending $2.00 to the Secretary, and filling out application blank on page 24 in the Buckeye Booklet, which will be mailed FREE upon request. This membership fee also pays dues in full to Jan. 1st, 1909, and of course includes all Club privileges as explained in Booklet.

NOW is the time to BOOM your BUCKEYES. Last season Club Members could not supply the demand for stock and eggs.

Stick Pin Buttons bearing the Club Emblem will be ready for distribution December 1st. FREE TO EACH MEMBER they will be an exact copy of the Madallion on the Special, being one inch and a quarter in diameter, on ivoroid, in Buckeye Brown.

Important—All Buckeye Breeders must get this letter, and know what we are doing if the Club is to grow. I, therefore, most earnestly insist that all members mail at once, in their own envelopes, copies of this leter, to all persons to whom they have made shipments, or whom they think will join the Club. Exact copies of this letter will be furnished you in quantity needed, FREE OF CHARGE. The Club will also stand the postage if required. DO IT NOW IF POSSIBLE, IF NOT, DO IT ANYHOW.

Observations—January 1st, for the first time since our organization Membership Cards will be issued, also Guarantee Shipping Labels for 1908.

State Vice Presidents will have an extra Special reserved for the State Show, or where they think it will do the most good.

Buckeye Booklets $3.00 per hundred, with your name on them— as long as they last.

Stick Pin Buttons 5 cents each or $4.00 per hundred.

Electrotypes of Club Members same size as at top of this sheet, 50 cents each.

Address all inquiries and applications to the Secretary,

R. P. SEARLE,
1118 East Bancroft St.,
Toledo, Ohio.

AD. SOLD ALL.

Spring Valley, N. Y., Nov. 2, 1907.
Messrs Leonard W. Lott & Co.,
108 Fulton Street,
New York City.

The two ads I put in the American Fancier gave very satisfactory returns. The demand was far beyond my wish to supply and they are still coming. Answers from all parts of the country, showing a wide circulation of your paper. If I had anything in the way of poultry to sell I should certainly put the ad in your paper.

Thanking you, I remain,
Very truly yours,
FREDERIC W. THOMAS.

Owned by Mrs. Laura Kunkle,
Kunkle, Ohio.

* * *

If the fowls are constantly kept crowded disease is certain. Too many may be one's loss.. Half the poultrymen perhaps overdo by keeping too many.

* * *

Be sure to keep the feeding coops, as well as those to confine the hen and her young brood, on dry ground; dampness is injurious.

* * *

Roup troubles are best avoided by keeping the quarters dry and avoiding direct draughts upon them while on the roosts. It will pay you to keep the poultry house warm and comfortable. It's half the battle won if you keep the quarters clean and warm in winter.

* * *

May apple root pounded fine and put in the drinking water is recommended as a good remedy for cholera among poultry.

FLOCK OF INDIAN RUNNER DUCKS,
Owned by
W. M. Sawyer, Lancaster Mo.

INDIAN RUNNER DUCKS.

On account of their superior laying qualities they are termed the Leghorns of the duck family. They are strong and erect, alert in every motion, and they are of exceptional hardness. The feathers are light gray, or fawn and white, and with the steel blue caps of the drakes makes a plumage of great attractiveness. One cannot pass a flock of these birds without stopping to admire them.

They begin to lay in February, and lay until their natural moulting period, which is the last of July and August, and if properly cared for will begin in September and lay until cold weather shuts them off. Eggs are what we are after, and we don't pick the hens during the egg seasons. Everything is picked clean the last of July, and as soon as the new feathers are on the early hatched ducks are old enough to lay; these with the old breeding ducks are yarded separate from the drakes and are for eggs. With but very little extra care and feed they will begin laying by the middle of September and lay until cold weather. By so doing the eggs will keep a long time, and by the time the ducks have quit laying several cases of eggs can be saved, which never fail to bring high market prices.

A few of the Runner's strong points are their ambition to search for food and their consequent power to destroy worms and insects give them free range and they pick up a large portion of their living, and a feed at night is all that is required to bring them home.

All these points with their wonderful egg production makes them an ideal fowl for the average farmer or poultryman.

Keep pure bred poultry, the best you can get, and advertise stock and eggs for sale, and you will be surprised to see what a nice business you will soon have. Start with a breed that best suits your fancy and stay with it. Artificial incubation and brooding, combined with judicious feeding, have been instrumental in the development of this wonderful industry. Machinery has enabled the poultryman to have his stock in the markets when prices are the best, and also of raising large numbers of birds in a limited space of time. One may think the market will be overdone, but it never has been. The demand for fine poultry is growing.

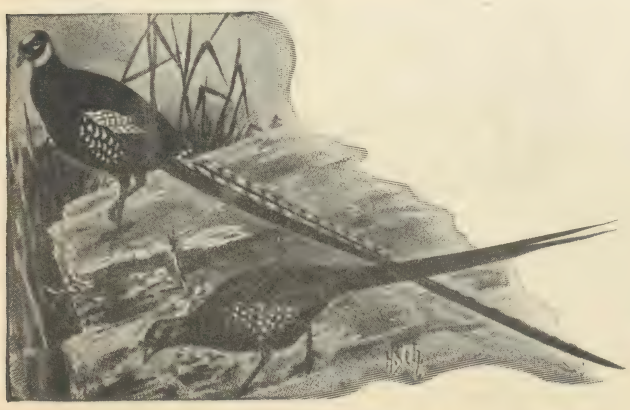
Light Brahmas.

A few good birds for sale.

J. A. ROBERTS,
Malvern, Pa.

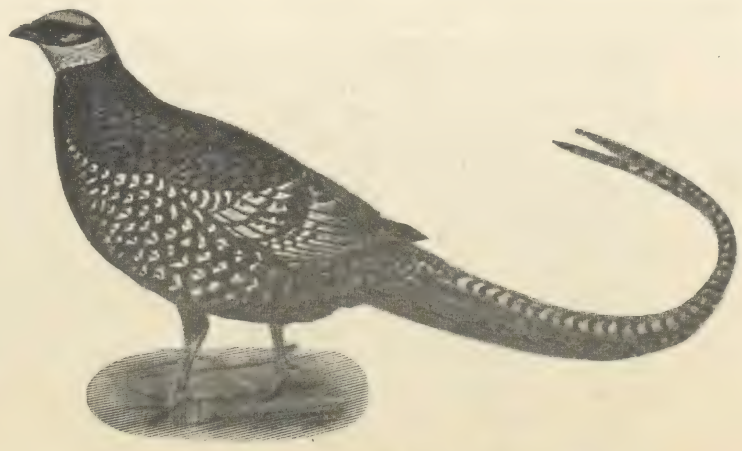
Black Leghorn Farms

Win at Hagerstown



1st and 2nd Cockeral. 1st and 2nd Pullet and 1st Pen.

This is what my young stock did on five entries in hot competition, nine breeders competing. I have the finest stock in the East. 1,000 birds, some grand c'k'ls, pul's and hens for sale. Write, L. W. PRATT, Le Raysville, Penna.



FOR EXCHANGE.

Reeve Pheasant, owned by M H Coffin.
Whitinsville, Mass

Madison Square Garden, December 17-21, 1907. Entries close December 2, 1907. Write Mr. H. V. Crawford of Montclair, N. J., for premium list of America's Greatest Pigeon exhibition.

* * *

Feed only what will be eaten up. Don't feed so that food is left on the floor or in the trough. It don't pay. Better feed oftener, but feed only what is eaten at each time—have nothing left over to get filthy.

* * *

There's no "Mystery" in advertising—it's just news. Tell your story in short, clearly expressed sentences. Be enthusiastic, but do not exaggerate.

The coming Madison Square Garden Exhibition premium list is now in the hands of all who made application to Secretary H. V. Crawford.

The classification is with few exceptions the same as previous years.

The judges in the pigeon section are R. N. Oliphant, F. W. Gorse, A. E. Smith, Geo. Ewald, Geo. Feather, W. J. Stanton, A. M. Ingram, G. Hart, and H. M. Pockman.

The following Specialty Clubs are offering specials: American Jacobin, American Dragoon, American Turbit, Barb and Carrier, American Owl, Helmet, the Eastern Fantail Club and Oriental Frill Club.

All fanciers desiring to show at America's Greatest Exhibition should write Mr. H. V. Crawford, Montclair, N. J., for premium list. Entries close December 2, 1907.

* * *

The Exeter P. P. and Pet Stock Association will hold its fourth annual show January 8th to 10th, 1908.

Pigeons are given a good classification and the members are endeavoring to bring out a large display in this department. George Feather will officiate and should be a good drawing card for this exhibition.

* * *

Mr. Samuel Johnson will again place the awards in fantail alley at the coming Boston Show. For the past two years Mr. Johnson has officiated and has brought out a strong entry.

Although previous to judging Mr. Johnson has through the press explained his interpretation of faking, no disqualifications have been made at Boston. In England the showing of fantails has caused considerable comment and lacing now is a thing of the past at the larger exhibitions.

We have seen and handled quite a few fantails in the show pens and also in the lofts, and to say the least, we have been surprised at the changed conditions of the specimens in some instances, and we believe the position taken recently in England also, by Mr. Johnson, is a step in the right direction.

* * *

The American Pigeon Club should have a ruling similar to the American Poultry Association. That is, a member has a right to make a complaint to the Secretary against a judge (licensed), regarding his conduct during the time he is employed professionally. The only unfortunate part is the American Pigeon Club doesn't license their judges as yet, therefore cannot hold such a tight rein over their employees.

* * *

In all probabilities W. J. Stanton will place the awards on Homers at the Garden next month.

These classes are always well filled with specimens of all types.

To properly place the awards it requires only one with a thorough knowledge of true Homer type. The Working, Exhibition and Show Homers are three distinct classes, each peculiar to itself. Mr. Wm. J. will certainly have his hands full to give entire satisfaction.

We hope that the Pouter entry at New York will be worthy of the classification given them. For the past few years this variety has greatly decreased in number, only a few years ago it was the attraction of the pigeon section.

The few breeders who tried to corner the fancy did the evil.

The competition was once between four or five, but afterwards the smaller of fanciers were compelled to acknowledge a "Pouter King," and although short in his reign it had a most disastrous effect.

* * *

Mr. A. A. Ashley, the Secretary of the Oriental Frill Club is exerting all his influence to bring out a good entry of Orientals at the coming meet.

This is a most striking variety and comprises a large family. Although Orientals lost a most ardent supporter some years ago in Mr. H. A. Waldon, they have been shown in fair numbers, and the competition has been very keen.

We trust that the coming winter exhibitions of Oriental Breeders will enter and help the good work being done by Mr. A. A. Ashley.

* * *

We expected to publish the awards in the pigeon section at the recent Jamestown Exposition. But the entry was so small, in fact we believe only eight being shown, that we thought it advisable to omit.

Hagerstown, Allentown, Brockton, Taunton, all brought out large pigeon classes. Why didn't Jamestown?

AMERICAN DRAGOON CLUB.

Undoubtedly the members of the American Dragoon Club will be agreeably surprised at the classification given by Mr. Crawford this year. I cannot see why the 1907 hen classes should not be well filled. Instead of giving two Solid Silver Spoons on young hens the Club will give one in each class. Now do not keep your 1907 hens at home, because they do not show up as well as the cocks. Exhibitors will have to be rather careful in picking the hens, especially in the case of late hatched ones. The judge will be justified in passing any would-be hens if found in these classes. The appearance of young cocks in the hen classes probably will not bring about any serious consequences. Should an apparent hen prove of the other sex of course the parties concerned will be expected to adjust the prizes to whom they rightfully belong. Now may I once more remind a few of the delinquent flock that their dues have not been received, and, some of the members have failed to let me know the colors they are breeding. These things should be attended to at once. We own three hundred locks and I trust that each member will do his part towards making us have use for one gross more at New York. So much for the Crystal Palace of America. Providence will soon be here. Also remember that a Club Special will be offered at Rochester.

Philadelphia and Boston will get two Club Spoons, to be placed as follows: One for best hard colored youngster, the other for the best soft colored youngster.

Mr. Booth donates the following specials for Boston: $5 in gold for best young Blue; $5 in gold for best young Grizzle; $5 in gold for best young Black, also $5 in gold for best young White. Mr. R. H. Miller donates $5 in gold for best yearling. Mr. H. E. Edmonds, $2.50 in gold for best Dragoon in the show. We will be glad to hear from any other members relative to Boston Specials. Who will we have for judge? To a certain extent the question of dollars and cents will have to be considered. I think I can assure the members at this time that they need not worry about the best bird not getting its due.

Now one thing non-members of the Club should notice, that it is the club's policy to encourage breeding in all the sections. Whether fanciers live in Portland or Seattle is quite immaterial, if they become members and let us know that they are alive and progressive. All will find it a good advertisement to be associated with a body that is trying to live on its merits, and meet the ever-changing conditions. We do not offer specials to keep some of our old members interested. They will breed and exhibit anyway. What we cater to is the other class of admirers. This policy is what led to our adopting the "Official Band Registering System." By this means it is possible for each member to get full credit for his ability as a breeder. I trust by next season we will have members in all the pigeon sections of the country. The dues are $2, and if sent at once you will get on the official list. This is the first year that the Club has offered Silver Spoons for specials. No one can claim that such a prize is not practical. Mr. George Churchman spent a few days in Boston last week. He seemed to think that if he won a spoon at New York his children and grandchildren would prize it highly in years to come.

Mr. Nester's Checker again won the special offered by the Club. This time at Hagerstown. Members should make an extra effort to secure entries for New York and Boston, also send a good liberal one from your own lofts. This is a substantial way to manifest your interest for the welfare of the Dragoon.

Mr. F. R. Fletcher Chesthunt, England, has joined the club, also Mr. Geo. B. Smith, Albany, N. Y. I trust that we will have as successful a meeting at the Garden as was held last year. Mr. John Smith writes that his father has gone to England. Whether he has gone for the goods or not he failed to state. However, it will be well to send along your best birds and take no chances. Mr. Opsann writes that he has two good youngsters, and it takes only one to do the trick. The General Meeting of the club will be held Saturday, December 21st, at 1:00 P. M.

F. W. WRIGHT, Secretary.

THE PIGMY POUTER OF TODAY.

Of all the varieties of fancy pigeons, there is not one which has improved in the past few years to such an extent as the "Little Prince of Pigeons," the Pigmy.

It was not so many years ago that the meaning of Pigmy Pouter was simply a small bird, that blew a globe, and had the markings of the English Pouter. It made no difference what the shape or station of the bird so long as it was small, well marked and inflated its crop, and the larger the crop the better it was liked.

And it was not a century ago that the list of colors was limited to one, blue. In fact, it is in the memory of living man when the Pigmy Pouter was not. But I am delighted to say that it is to-day, and in all its glory, the very essence of the scientific breeder's art, and it will improve, even more in the next few years than it has in the past.

The time has now arrived when the accent will be on the **Pouter** instead of Pigmy, as in the past. The little fellows will be Pouters first and Pigmies after. I can hear the old breeders saying, "Give me the little birds every time," and I say so too, but I should add, "but they must be Pouters, too." These chaps who want little birds, will even now stretch the size a trifle to get the other points that are so dear to the hearts of the English Pouter breeder and they are fast coming around to acknowledge the fact that we cannot get the fine points with the desired contraction in size, in the same bird yet awhile, though it will come, is coming and coming fast.

In all the advance and improvement since it has become the desire of the moulders of the Pigmy to form a Pouter as well as a Pigmy, the success attained was shown to a more marked degree at last year's shows than ever before. There were some birds shown that were truly, Pouters in miniature, and such good Pouters, that the attention of the leading English Pouter breeders of this country and of Canada, was attracted to the extent, that a few pairs of the dwarfs may be found in the lofts of many of these strictly Pouter men, who are for the **Pouter,** first, last and all the time.

There is not the slightest doubt, but that we are fast getting to the point when we can compete with the Pigmy for Pouter points against the old but

Oriental Frills, owned by A. A. Ashley, Taunton, Mass.

stately English Pouter, the Pigmy's ancestor. And when we do reach that perfection, I am very much afraid that it will mark the end of those ancient kings of fancy pigeons, for the Pigmy will have all of the good and noble qualities of its giant parents and none of their objectionable characteristics, which though few, do exist.

From the little, thick, low, squatty, big blowing but perfectly marked, short-legged and long-tailed Pigmy Pouter of but one color a few years ago, a prize winner, we now have the tall, stately, slender, upright narrowly tapering, short-tailed little Pouter with long close limbs set away back, giving that long waist and beautifully formed girth (which gives the impression that a string is tied around the body under the globe), a perfectly round globe, the size in keeping with the contour of the bird, forming the head of that mostly desired wedge which terminates with the tip of the tail as its apex, the legs gracefully bending at the knee, covered from body to foot with soft, smooth stocking boots, then spreading out into a charming slipper.

This, in six colors, black, blue, silver, red, yellow, cream and white, the colored birds perfectly marked, in connection with exceptional breeding qualities and a most amiable and responsive disposition, is the perfection of fancy pigeons, THE PIGMY POUTER OF TODAY.

E. C. DUFFY,
Secretary Pigmy Pouter Club.

AMERICAN ORIENTAL FRILL CLUB.

In looking over the premium lists of the New York Poultry, Pigeon and Pet Stock Association, I find there are a few errors. Mr. Hart's name is left off the list of judges. This is evidently a mistake, as I have a letter accepting our choice.

In the classification there are two slight errors. Black Laced and Dark Satinette should be Black or Dun Laced Satinette. Black Laced or Dun Blondinette should be Black or Dun Laced Blondinette.

Did you have any trouble in locating the Specials? Several have, but you will find them at the bottom of page 51 and top of 52. We have twenty-four members, and we should have about 124 birds at meet.

New York coming this year, Boston should also have a good entry. There will probably be two Cups on Orientals at this Show. I understand that the management has been trying to secure the services of Mr. Oliphant to place the ribbons. He should draw a good entry.

Who will show a few birds at Chicago and boom the Orientals of the West? I will for one. Who will have courage enough to say two?

A few matters which should be brought up at our meeting in December are as follows: Shall we reduce dues or drop initiation fees? Standard for Oriental Turbits should be made clearer. Shall we offer certificates to first prize birds at club meets? Shall we nominate candidates for Judge at our annual meeting? The above have been mentioned during the year and it would be well to bring up these questions and have them settled at our meeting. Let every member who possibly can be at our annual meeting, New York, December 21st. A. A. Ashley, the Secretary and Treasurer.

THE POLISH LYNX PIGEON.

The Polish Lynx Pigeon, which was first introduced into Germany a few years ago by Prof. von Rozwadowsky, of Krakow, is described by him as a useful variety of the very first order aside from the beauty of the birds themselves. He esteemed the Polish Lynx Pigeon as, in fact, the only species which really deserves the name of useful Pigeon, because, he says, it is in relation to quantity of flesh produced, absolutely the greatest and most easily capable of feeding. In their home they are accustomed to a raw climate, and are everywhere acclimatable, being hardy birds, which lay, brood, and feed in an industrious way to be depended upon. The genuine Polish Lynx Pigeon occurs only in the surroundings of Krakow. A kind of field Pigeon, bred in the vicinity of Bochnin, and similar in marking,, because they occur mostly with bars and spangled, has been falsely designated Lynx Pigeon. This false Lynx Pigeon is considerably smaller than the genuine, and they have colored flights and are usually crested.

The genuine Lynx never occur in yellow and red, but only in black and blue, and that is to say there are:

1. Self-colored blacks, with white bars and white flight feathers.
2. Self-colored blues, with the same markings.
3. Blacks and blues spangled.

The genuine Lynx should be of short, but strong, thick-set, and compact figure. The bars and spangling should be correct in perfect specimens. The most bred are birds of black spangling—that is, black ground color, with a glistening violet neck. According to Prof. Baldamus, if white rump or black feathers occur, or an unequal number of white spangles, they are counted as varieties of beauty. Faults are slim or long body, foul feathers on the head, neck. and breast, and crest or boots. Marten, in describing the Lynx Pigeon, says: "The forehead is rather high and wide. The back is rather long; eyes yellow-red, throat sharply bent, neck short and wide, breast very wide; back quite short, very wide, and somewhat arched; wings rather short but wide; the ends of the wings rest on top of the tail. Tail rather short, somewhat wide, and carried nearly horizontal; feet not feathered. Color and marking entirely in black and blue. There are self-colored blues and blacks, with white flights and white wing bars, and the same with spangled wing shields. The best spangled are the blues.—Pigeons and Poultry.

* * *

Because "the other fellow" don't believe as you do is not a sure proof he's wrong. You may be mistaken. Anybody is liable now and then to be mistaken. Let's be fair in all discussions if we discuss at all.

BARGAINS PIGEONS MUST SELL

1 Pair **White Homers** $2.50, 1 Pair **Polish Lynx**, also **1907 bred** (imported winners) $7.00, **10 Maltese** $30.00, **10 Carneaux** $25.00, **16 Carneaux Maltese Homer Crosses** $25.00, **3 Red Strassers** $7.00, **20 Helmets** (crested and plain) $20.00, **1 Yellow Dragoon Hen** $2.00.

PHEASANTS

DO YOU WANT TO GET RICH. 50 BEAUtiful souvenir postals of Pheasants, Game Birds, etc., for 35 cents, including scheme "How to Make Money Quick by Mail." Pheasant breeding pays 100 per cent. better than chickens, easily raised. Price catalogue, interesting information, 150 pages, 250 illustrations, colored pictures, exchanges, all about breeding, 25 cents. U. S. Pheasantry, Poughkeepsie, N. Y.

PHEASANTS, ALL VARIETIES, HUNGARian Partridge, Quail, Red Jungle Owl, ducks, geese, swans, deer, elk, etc. No catalogue: write for what you want. Get "DENLEY'S" Bird book, the best published, giving foreign breeders' secrets for breeding game and ornamental birds. Postpaid 25 cents. C. A. Denley, 72 Hicks St., Brooklyn, N. Y.

AMHEREST AND GOLDEN PHEASANTS guaranteed pure. Bred from imported birds. Partridge, Cochin Bantams. Little beauties. Winners wherever shown. Prices low. Enterprise Pheasantry, Yoe, Pa.

GOLDEN, SILVER, REEVE AND LADY Amherst Pheasants. My Pheasants have been exhibited at many of the largest shows and have never been beaten. A few choice birds for sale. M. H. Coffin, Whitinsville, Mass.

FOR SALE—30 LARGE EARLY CHINESE Ring Neck Pheasants, commonly called Mongolian. In Paris and trios not related. Part by the Oregon bird. Bought of Mr. Homer Davenport last Spring. A pure Chinese. No finer stock than the ones I breed. Prices reasonable. Stamp for reply. C. Russell, Conesville, N. Y.

DUCKS

INDIAN RUNNER DUCKS—THE GREATest of all ducks. Stock for sale from a prizewinning and wonderful egg producing strain. Prices to suit the buyer. Can furnish any grade, from $1 to $5 each, according to the quality of the birds. Write for free descriptive circular. W. M. Sawyer, Lancaster, Mo.

INDIAN RUNNER DUCKS—THREE OF these laid 308 eggs in 120 days. A trio will stock your farm and cost $5.00. Single and Rose Comb Rhode Island Reds May Cockerels, 7½ lbs. Eggs in season. $1.50 per 13. Satisfaction guaranteed. Wib. F. Clements, Agency, Iowa.

WE HAVE 175 HEAD OF MAMMOTH Pekins of good quality and size to offer you and will expose some facts concerning them. They are from five to seven months old, and will lay nearly as early as two-year-olds and keep at it as long as the old ones. Then these eggs are worth more per dozen on the market than Hens' eggs and the young ducks bring from 15 cents to 20 cents per pound when 10 weeks old, selling for 60 cents to $1 each. They are raised easy, too. Can you make money easier? Now, we know you want some, and so will charge you $1.50 each and give you a discount on 3 or more. If they are not as represented or don't please you, send them back at our expense, and your money will be refunded. When ordering please state just what you want. Joyce Bros., Penfield, N. Y.

MAMMOTH TOULOUSE, EMBDEN AND White China Geese. Black Cayuga and Rouen Ducks. White Plymouth Rocks. Pure Guineas, Bronze Turkeys all bred from my first prize winners at Madison Square Garden, New York. If you want prize winners or breeders I can please you. Clarence W. King, Romulus, N. Y.

WILD MALLARD DUCKS (VERY NEAR pure). Greatest layers and decoys. Finest of eating—2 Ducks, 1 Drake, $4, 3 Ducks and 1 Drake, $5. Now booking orders for Spring delivery of eggs at $1.50 per 15. Satisfaction guaranteed. Correspondence a pleasure. Ed. Rousey, Manchester, Ills.

JERSEY STRAIN PEKIN DUCKS—WON first prizes last season at Bridgeton, Paterson and Philadelphia Shows. We now have some very choice, extra large young Drakes to offer at $2.50 to $3.50 each, that will surely please you. Also White Rock Cockerels. Springer Bros., Route 4A, Bridgeton, N. J.

INDIAN RUNNER DUCKS. CHAMPION layers. White egg strain. Raven Ducks (Domesticated Mallard), best table Duck. Mammoth Pekin Ducks, best general market Duck because of size and color. Eggs, dollar for twelve single or assorted varities. Forward money order with order for eggs. Order early. John M. Mott, South Haven, Mich.

RHODE ISLAND REDS

FOR SALE—20 ROSE COMB AND 20 SINGLE Comb Rhode Island Red Pullets at $1 each, April hatch, now laying. They are dandies; order early and get the pick of the flock. L. O. Mayer, Millersville, Pa. Route 2—Box 32.

R. C. R. I. REDS TUTTLE STRAIN. 100 Pullets, 50 Cockerels. Breeding and exhibition birds, $2 and up. Also 25 utility Pullets, $1 each. Farm raised. Shipped on approval. M. B. Gould, Granville, New York.

ANCONAS

MAINS' STRAIN OF ANCONAS HAVE proven their quality at Madison Square Garden, N. Y., Hagerstown, Md., Allentown, Pa., Newark, Dover and Morristown, N. J. Finest exhibtion stock a specialty for the fall and winter shows. Frank W. Mains, Morris Plains, N. J.

PET STOCK

MARL RIDGE RABBITRY OFFERS A FEW choice breeders imported stock in Belgian Hares, Flemish Giants, Angoras, Himalayans, and Dutch Rabbits. Peruvian smooth, Dutch-marked and tortoise and white Cavies cheap. Am closing out all Cavies. R. M. Wills, Hornerstown, N. J.

BRAHAMS

EAST VIEW POULTRY YARDS, Box F. Ballston Spa, N. Y., have Light Brahmas of quality, scientifically bred for exhibition and business and win at many of the leading shows. They have color, style, size and feathering fit to grace any yard and will give satisfaction, we guarantee. Prices promptly mailed.

DOMINIQUES

AMERICAN DOMINIQUES—I BELIEVE I now have in my yards the best strains of American Dominiques in the world. The purest blood that Washington County, N. Y., can produce (and this breed has been kept there for well-nigh 100 years). The L. M. Jones Strain, bred in Oneida County, N. Y., for over 50 years. The Darlington-Yerkes Strain, bred in the vicinity of Philadelphia, over 65 years. And last but not least, the W. H. Davenport Strain, which represents the best that New England has to offer. I have carefully mated up six Pens from the above strains, and will offer eggs for hatching during the season of 1908. The Dominiques, the oldest American breed, and the best all-purpose fowl, are rapidly coming to the front again; a club has been organized, and at least 100 breeders have now taken them up, and we are looking for a big sale of eggs and stock during the coming year. Cut out this advertisement, and keep it for future reference. No surplus stock on hand now. Dr. W. H. Harwood, Chasm Falls, Malone, N. Y.

MISCELLANEOUS

SHADY LAWN POULTRY FARM—IF YOU want the very best stock or eggs of White, Silver, Golden, Partridge, Buff, Columbian, Silver Penciled Wyandottes; Barred, Buff Rocks; Langshans, Hamburgs, White, Brown, Buff Leghorns; Guineas, White Turkeys, Pekin, White and Colored Moscovey Ducks; Toulouse, White China Geese. At the Lycoming county fair on 40 entries won 27 firsts, 10 seconds in a large class. Fine catalogue for stamp. B. F. Kahler, Hughesville, Pa.

WHITE ORPINGTONS AND WHITE ULYmouth Rocks. Pullets and Cockerels, from leading strains; strong, healthy and well matured, some yearling Hens, pair Ring Neck Pheasants. Prices reasonable for quality of stock. J. Rosenthal, Dumont, N. J.

RARE BREEDS AND POPULAR FOWLS and early chicks for the Fall fairs and early shows. I have them at a fair price, one bird or a hundred, or a complete show. I have won more prizes in competition in the largest shows than any breeder in America. Printed list free. W. A. Hoyt, Whitewater, Wis.

HEADQUARTERS FOR ALL KINDS OF Pets and Poultry, etc., such as singing Canaries, Parrots, Gold Fishes, Aquariums, Rabbits, Guinea Pigs, Monkeys, Swans, Pigeons, Peafowls, Ducks, Chickens, Dogs, Cats, Ferrets, etc. Send 5 cents for catalogue. Edw. S. Schmid, 712 12th Street, N. W., Washington, D. C.

DR. HARWOOD, CHASM FALLS, MALONE, N. Y., breeds the best in American Dominiques (the real old Dominique); Columbian Wyandottes (McIntosh's & Parrish's Strains); Silver Penciled Wyandottes (Wyckoff's and Arnold's Strains); and Light Brahma Bantams (Frede's and Hoyt's Strains); new circular in January. Surplus stock for this season all sold except some grand Dominique Cockerels and Light Brohma Bantams.

AS WE ARE NOW THROUGH OUR EXhibiting 1,000 Prizes won. Each variety of Plymouth Rocks. Each variety of Wyandottes. Each variety of Leghorns. All at $3.00 and $4.00 trio. Each variety of Ducks and Geese at $4.00 and $5.00 pair. Wood & Freeman, Fitchburg, Mass.

ORPINGTONS

Black, Jubilee, White and Buff

At the Brockton Fair, the Madison Square Garden of the Fall shows, I won on the above varieties, 5 firsts, 4 seconds, 5 thirds, 2 fourths, and 1 fifth, besides specials, winning more points than any two competitors combiued, ten exhibitors competing.

A few more cockerels to spare at honest prices, and I can fit you out on any grade you may desire, from a bird fit to show in fast company, to one bred just as good, but lacking in fancy points—in other words, a utility breeder. No more pullets for sale at any price. Write for quotations.

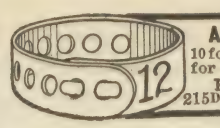
"FEED, TEN CENTS A BUSHEL"

Is your main feed for producing eggs and growing young stock costing you more than 10 to 15 cents a bushel. If so, you want my new book, title, ***Profits in Poultry Keeping Solved,*** which tells you how to make this great feed and gives you every detail in laying out and running a poultry plant. Gives you my life time experience. You can save $25 a year on every 100 hens you feed as well as increase your egg yield 30 to 40 per cent. No mashes under my new system. I have put hundreds of plants on a paying basis and can yours. Write to-day and stop that big feed bill. Circulars and testimonials free. My second edition of 3000 copies now ready.



EDGAR BRIGGS, BOX O, NEW ROCHELLE, N. Y.

Poultry Shows

Are a great place to sell these Punches. They are all steel, nickel plated. Punch a clean hole of the right size. Not less than three dozen sold in every show where they were on sale last winter. Show Secretaries write for "Special Premium" offer. *Agents wanted.* Price 25c. by mail.

PARTRIDGE PLYMOUTH ROCKS.

THE BREED THAT IT PAYS TO BREED, GRANDLY BEAUTIFUL AND GREAT IN UTILITY.

The World's best two Cocks, winners of both first and second last Madison Square show mated to the best to be had females. First N. Y. Pullet included—have produced a lot of youngsters, that stand a gunshot ahead over all competition. Only a few choice birds to sell. A few extra fine Cockerels, $5.00 and up, fit to win anywhere, will improve any yard, worth double amount asked.

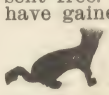
One choice young pen, $20.00, a grand start for a beginner.

Six trios of Indian Runner Ducks, 212 egg strain, $6.00 per trio.

Four trios, Mallard Ducks, half wild blood fully domesticated $5.00.

One pair Grey Call Ducks, good breeders, tested, $6.00.

Single Drakes in above varieties. $2.00.



A few White Muscovy Drakes, young, at $2.50 apiece.

All transactions subject to approval. Birds back brings money back to you, we pay the return express. It proves our birds stay sold and that *our stock is right.*

MEADOWCREEK FARM - PITTSFORD, N. Y.

10,000 FERRETS. *Finest strain of stock in the land.*

Perfect workers. They clear buildings of rats, drive rabbits from burrows. 48p. illus'd book sent free. This book tells how my ferrets have gained a world wide reputation and carefully explains all points in breeding and working these little animals. Send at once for this free book and price list.

VOL. XXVII NEW YORK CITY, DECEMBER 1, 1907 No. 692

Things Neglected in Poultry Culture

Success or failure in the poultry business depends largely upon the attention paid to the little details which are quite apt to be considered insignificant. There are so many of these "little things" that some are often neglected. While some, perhaps, do not seem important, neglect of any of them may result seriously. Too few people are sufficiently impressed with the fact that one neglect in poultry breeding may counteract the effects of a dozen carefully observed requirements. The essentials in poultry culture are the countless little things that one can scarcely teach another, and they have more to do with results than general rules.

Beginners often have exaggerated ideas of what can be accomplished with poultry. Thinking they are using foresight and economy that will aid them to success, they pack the eggs in their incubator as closely as possible, even piling them on top of one another in places, and put 150 eggs in a machine intended to hold about 120. Other persons, belonging to this same class, put 18 or 20 eggs under a hen that could comfortably cover few, if any, more than a dozen. This is a poor kind of economy—indeed, it is really extravagance, for the desired results are never secured.

Many poultry raisers possess a rather surprisingly large amount of timidity when it comes to weeding out their fowls. Quality is a more potent factor than quantity in success. Not a single fowl should be retained after it ceases to be useful, nor should pullets be kept long after they should begin to lay if they do not fulfil expectations. So far as prolificacy or standard requirements are concerned, the degree of merit does not lie so much in the breed as in the strain or flock. When hens become overfat, lay eggs with soft shells, or have vices, such as feather-pulling and egg-eating, it is an unnecessary waste of time and money to keep them.

In feeding, a little care and attention mean much—frequently the difference between an expense-paying and a profit-paying egg yield. Your fowls will well repay you for any studying you may do along the line of finding out just what they need to enable them to successfully produce eggs. Different breeds of fowls, different climatic conditions, etc., make an infallible formula for the feeding of poultry impossible. I believe that the best food ration (all theories to the contrary) is the one experience shows you will give the best results in your own particular flock. Experiment along this line, and then feed what your experiment proves to be the best, regardless of scientific theories, "wideness" or "narrowness" of ration, etc. Science is all right, and I am a firm believer in the good being accomplished along the lines of foods and feeding by scientific research and investigation; but it has been my experience that it is quite advisable for the poultry man to do some independent and individual thinking along these lines.

The drinking water and vessels generally receive less attention than they should. Frequently the feeder is in a hurry. He sees that some water is remaining in the drinking vessel, and thinks that it would be unnecessary to supply other water until the fowls have consumed all that is now before them. This is a mistake, for pure, fresh drinking water is just as necessary as pure feed and fresh air to the health and comfort of fowls. When fresh water is given, it should not merely be added to that already in the vessel; but all the old water should be thrown away and the vessel thoroughly cleaned before the fresh water is pourned in. When water is supplied, see that the drinking vessels are clean. Scald them out with boiling water, to which have been added a few drops of carbolic acid, about once a week. Keeping the water supply and the drinking vessels clear and pure at all times may appear to be an unimportant matter, but some day it will prevent a serious disease from getting a foothold in your flock. Diseases are frequently communicated from one fowl to another through tne medium of drinking water. If a bird has the roup, or just a mere cold, the discharge from the nostrils contaminates the water; and when the other fowls partake of it, they, too, are liable to become affected with the disease. To be sure, a sick fowl should be promptly removed from the flock to some isolated place; but there are times when the presence of a sick fowl cannot be detected until the disease has reached a serious stage.

Keep fowls and chicks free from lice. Sometimes it is a difficult matter to know whether one's fowls are afflicted with lice and mites or not; then the fowls should be given the benefit of the doubt. There may be uncounted thousands of mites hidden in the cracks and crevices about the house before one is seen, for they are night-workers, and remain in hiding during the day. A little lice-powder and a little time are all that is necessary for improved appearance of your birds and the increased profits they will return will tell you whether or not the observance of these little things pays.

Cleaning the poultry-house is a duty often put off from day to day, until foul odours poisen the air and breed germs of deadly disease. The rank ammoniacal odours arising from fermenting droppings are the forerunners of serious diseases of the mucous membranes, and many a case of canker or roup comes as the direct result of filthy houses.

The soil is sometimes neglected until the yard becomes an unfit place for poultry to congregate. It does not take long for a small flock of poultry to defile a large run.

Strict attention to these little details, as well as others too numerous to mention, requires work; but I am assuming that the poultryman desires to do his whole duty by his birds. This being the case, labour will not prevent him from performing necessary tasks.—Feathered Life.

ARTIFICIAL INCUBATION.

The success of artificial incubation depends to a very large extent upon maintaining the proper moisture conditions in the egg chamber. In the past operators have been compeled to rely almost entirely upon experience to determine whether the proper conditions are being maintained.

Some reliable means of controlling moisture conditions which may be safely employed by inexperienced as well as experienced operators is especially important in view of the rapid extension of artificial incubation. The West Virginia Experiment Station, taking as a basis for such a method the normal loss of weight of eggs during incubation under brooding hens, made a series of observations which showed that the eggs which hatched under hens lost on an average 16.5 per cent. of their weight in nineteen days, while the infertile eggs and those which did not hatch lost from 1 to 2 per cent. less. The normal loss of 100 eggs was found to be about 10 ounces in six days, 20 ounces in twelve days, and 31 ounces in eighteen days. By weighing the eggs in the tray at the beginning of incubation and at intervals thereafter the progress of evaporation may be observed, and the ventilation and moisture supply so regulated as to make the loss of weight conform to these normal figures.

White Wyandotte, Hen and Chicks.

THE wintry winds will soon sing their sad requiems. The fancier that is a fancier, denoting one that has a taste for his pets, one that lives and feels with them, will make haste now, if he has not already prepared his winter quarters, that his webfoots may enter and go through the coming inclement season without any unnecessary hardships. Ducks and geese are naturally hardy birds. They have a coat of feathers that will withstand almost any kind of severity, if only their bedding is dry and the house tight enough to keep the wind from blowing through. This will prove true in all cases where the birds are not weakened by inbreeding or excessive kindnesses in rearing. It means, that to birds endowed with vigor, that nature intended they should have, but little preparations need be made. But, alas, how many of them have we?

Are we not all of us more or less at fault in breeding for certain points, for certain little peculiarities, for certain shades of feathers, to loose sight of the far more desirable attributes of health and vigor, are we not all of us at fault at times in closely housing our pets to keep them from hustling and in that way allowing them to reduce their muscle through disuse? In just such measure as we have allowed the birds to become our pets and charges, in just such proportion as we have allowed them to grow away from their former natural modes of living, in just such measure must we furnish additional protection. The highest bred ornamental bantam duck, because she was bred for smallness of size, needs more protection than the vigorous market breeder, selected from thousands probably, that has proven the very acme of health and strength.

Let us study our breeds, our birds and grant them the protection their mode of breeding demands.

Wise is he, however, who never forgets, that fresh air is more essential than feed. Ducks and geese need plenty of fresh air at all times. The quarters for the latter had best be left entirely open to the south. The houses for the former should have ample ventilating facilities, that their keeper can use his good judgment as to the state of the weather.

Let the house for the ducks fit the number of the ducks. Ducks, having great bodily heat, will warm a house of the right proportions and make it comfortable in even the coldest of weather. Avoid the putrid smell, that confronts you upon entering in the morning by giving more air or clean beding or both. The only delicate point about a duck is their feet and even they are rather cold resisting. Clean, dry bedding, however, and the chance to bathe, even if the ice has to be chopped, will make them forget their feet. Allow ducks a bath at all times, if it does not blow or freeze while bathing.

We have ten standard varieties of ducks and some others, that have either been left out, like the Mandarian and Wood, or that have never had kind keepers apply for them, like the Mallards, the Bishops and the Sheldrakes. We have them large as Aylesburys and Rouens, and we have them as small as a bantam. They are made or can be made to suit individual tastes and fancies. They are bred for market purely, as the Pekin, or they combine high market and fancy value as the Rouen, or, finally they are kept for ornamentation alone, like the East Indias. The nonstandard Mallards, a variety domesticated from the wild variety of that name and increased in size since domestication, are often bred for fancy as well as for hunting purposes. Right here it may not be out of place to add, that if records could be had, we would find the Mallards to be a very good market bird. Their meat, having much of the wild flavor about it, is in great demand; they are always in good condition, breed freely and true and are frugale feeders. If all things, cost of housing, feed and care, and the number of pounds of meat raised pro old female in a season were to be considered, we are not afraid, that the Mallard would not outclass our every-where-to-be-found Pekin. It may seem strange, but it is true. Mallards will raise two clusters of young per season, do their own hatching and raising and the percentages of loss in infertile eggs or died-before-maturity ducklings cannot be excelled for lowness by any other breed of ducks, excepting probably the Muscovys.

A drake and two or three ducks of them would produce a bunch of youngsters in a year, that would mean all profit, if the old had the run of the place and for feed the leavings of the henyard or the pick from the barn.

In mating let us caution again against inbreeding. Inbred ducks are patience spoilers. No bird shows the effect so strongly and so quickly as a duck. Inbred ducks are subject to weak legs, running eyes and getting thin, the forerunner to consumption. Avoid troubles and get fresh drakes as often as possible.

Remember here, that it is not the large, the over large and heavy-fed and heavy bird, that produces the large youngsters, that grow quickly. Far from it. Large birds are as a rule only partly productive. Select the medium active fellows, birds with a large, deep-colored eye, full of vigor. From such birds you will raise youngsters in sound health, and sound health and a good frame will allow you to put feed into them, that will make them large ones for the oven. Activity, hunting, swimming and roaming the fields for the breeders or the birds intended to become breeders; close confinement and heavy feeding for those intended for market. Never mix the two methods and troubles will stay away from your duckyard.

A question was put to us the other day by an embryonic fancier as to what variety to select. We said in substance: Select a breed that is rare, a breed that is either new or so old, that it has become almost extinct. Bring it back into its glory and more joy will be yours than if you breed with an army of other more common varieties. The East Indias are of such almost dead breed. But few good birds have ever been seen and in late years the shows fail to coax any of them out, no matter what the quality may be.

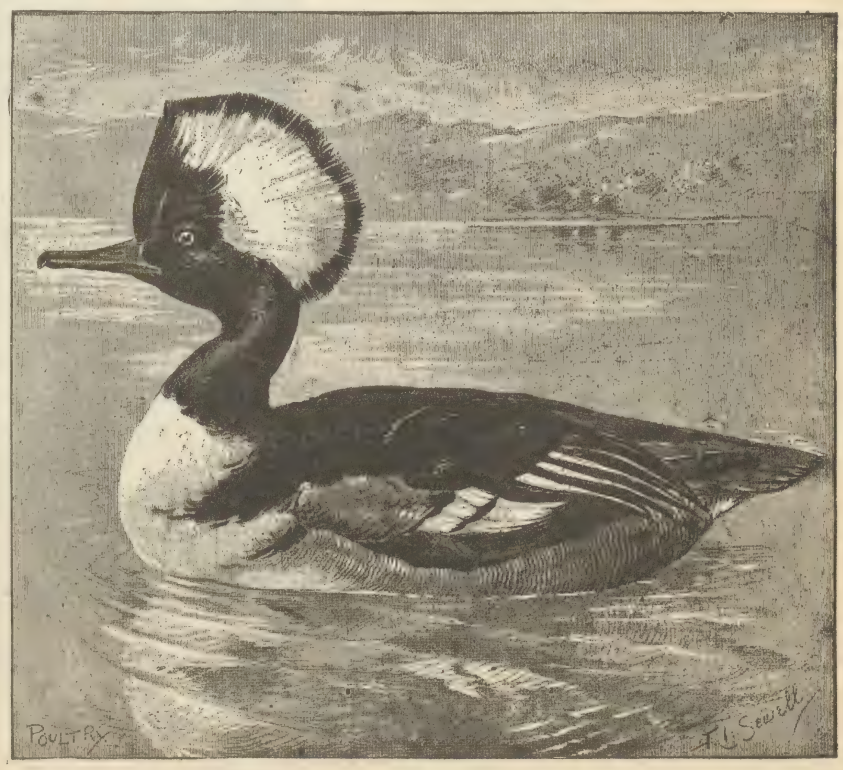
East Indias should be very small, just as small as any Call duck ever was, they should be pure black all over and in the sun shine a beautiful lustrous green. It has been said, that they originally came from Holland. But even there they are now unknown in quality such as we demand. What we get palmed off on us to-day is a crossbred specimen from Cayugas, having neither the good meat points of them nor the sheen on the plumage.

Is it not queer how names will be made? The East Indias are supposed to come from East India, at least so some English cousin told us, when he tried to make hay while the sun shone, in selling their eggs and the stock. It was a cute story and a captain of an East India sailing vessel figured prominently in the deal to give color to the story. All the water, however, that the first birds in England crossed in getting to that land, was the Channel, when they came from Holland. East Indias are a child of the lowlands of Holland, the veldts, where they are produced haphazardly in breeding for market.

The Indian Runners—they too were named by an Englishman—came from Holland also, where they still can be seen in all colors and shades of colors. It took England, however, to select from all colors two, the fawn and white and the grey and white and to perfect them. We at last adopted the fawn and white and kept them sailing on the well-known but wrong-impressions-giving name.

The pleasures and profits of duck raising are exceeding other branches of poultry culture, if all things are just right; on the other hand a duck will eat its head off, as farmers are apt to say, if not managed rightly. The man with experience knows it, however that ducks are dollar-makers. Let those keep ducks who never kept ducks before.

And those who have kept ducks, keep ducks the more.



ADVANTAGES OF A RUN.

The advantages of a run attached to a portable house cannot be too strongly emphasized. Such a contrivance reduces the labor bill very considerably, as it dispenses with the necessity of someone going round at night to close down the trap doors, by no means a light task when the houses are scattered far and wide about the fields, says Feathered Life. When the birds are fed in the afternoon the grain should be scattered in this run, the door closed, and in this manner they will require no more attention that day. Another advantage is that the birds can get out of the house into the run at what hour they like in the morning, which means that during the summer months they obtain several hours' more sunshine and exercise than would otherwise be the case.

* * *

It will not now be very long ere crops are required for the accommodation of the hens and their broods, and a question that is frequently being asked is whether it is advisable to have a wooden floor, or whether the chickens thrive better when sleeping on the earth. The answer to this question must depend upon where the coop is to be placed, and if in the open air then upon the state of the weather. If the coop can be placed under a cart-shed, or some such building, it is better to have no floor; but if it is to be placed out in the open a floor must be provided, as otherwise cramp will be almost certain to ensue. The best plan is to have a movable floor —one that can be put in or taken out at will, so that it can be used or not, according to the conditions. When the dry system of feeding is adopted it is necessary to board the whole or part of the run, in order that it may be covered with chaff, among which the grain can be scattered. It does not do for evident reasons to throw the chaff upon the ground, as for one thing it makes the place very untidy; besides, the chaff quickly becomes wet and unsuitable.

*

THE HOODED MERGAUSER.

RICHMOND HILL SHOW.

The first annual exhibition of the Empire Poultry Association, November 19th to 22d, at Richmond Hill, L. I., was a success, and Mr. Robert Seaman, the Secretary, is to be congratulated.

More than enough money was received by the second day to pay all bills and all the premiums were paid on the last day.

Certain large breeders regret that they did not exhibit at this show, as the quality was high. Billard & Middleton, Sinclair Smith, W. W. Rapelye, Wm. W. Titus, J. E. Willmarth, Robt. Seaman, Paul W. Doll and others showed birds of such high quality that there should be no hesitancy in entering some of their Richmond Hill winners at Madison Square Garden.

W. E. Willmarth was kind enough to report for us the following two classes:

Buff Wyandottes—Quality good all way through; Cock and Pullet classes competition very close, but Hen and Cockerel winners have things easy.

First Cock—A handsome bird, beautiful, even surface color, medium light shade, poor undercolor, shown in good feather, fine comb, except trifle large; body fairly good shape, a trifle too long in back, small size.

Second Cock—Large size, good shape, even, rich buff, fair comb, good undercolor, shown in poor feather.

Third Cock—Good size, very blocky, very even, rich buff all over, fine comb, shows some dark in tail, in poor feather.

Fourth Cock—Good shape, good comb, medium size, nearly solid buff except shows mealy on wing bows, poor eyes.

First Hen—A Buff Wyandotte all over, good size, shape, comb and color, wins easily.

Second Hen—Good size, very typical, even shade, soft buff, shows little dark in tail.

Third Hen—Medium size, fair shape, in poor feather, even, dark buff all over, fine comb, but too large.

Fourth Hen—Fair color, poor shape and small size.

Fifth Hen—Similar to second, smaller, poor eyes.

First Cockerel—Almost perfect in color, good shape, not quite developed yet, fine comb, wins easily.

Second Cockerel—Very blocky, good size, nice even color of right shade, good comb.

Third Cockerel—Light buff, very nearly solid, poor shape, not developed yet.

Fourth Cockerel—good color, fair shape and comb, good size.

Fifth Cockerel—Fair color, poor shape, too young.

First Pullet—Large, well developed, even, rich color, good shape, eyes a trifle light.

Second Pullet—Very blocky, medium shade of buff, little uneven on surface, good size, good comb.

Third Pullet—Rich golden buff, nice shape, good comb, good size.

Fourth Pullet—Similar to second, not quite so large and blocky.

Fifth Pullet—Solid buff all way through, too young, not developed yet.

Buff Rocks seem to be scarce on Long Island, none at Mineola and only five at this show.

First Cock—Good shape, very dark, nearly solid tail and wing, but red on wing bow, good comb, good size.

Second Cock—Nice even, medium shade of buff, small size, fair shape, in poor feather.

First Cockerel—Fine color and shape, good comb, large size.

First Pullet—Solid buff, small, not developed yet.

Second Pullet—Good shape, large, even shade buff surface color.

AWARDS.

BARRED PLYMOUTH ROCKS—c. 1, W. W. Rapelye; 2, Geo. Murman; 3, Bayview Farm; 4, C. J. Singer; h. 1, Bayview Farm; 2-4, Singer; 3, W. E. Robinson; 5, F. H. Wells; ck. 1, Chas. DUCK, 1907—1-3, Westlook; 2-4, Sinclair Smith.

GEESE.

TOULOUSE GOOSE PRIOR TO 1907—1, Rev. Wm. P. Mackey.

GANDER, 1907—1, Goose, 1907; 1, Robt. Seaman.

TURKEYS.

BRONZE TURKEY—Cock, F. H. Wells.

AUGUSTA, GA., SHOW.

I am sending you a report of our show, which has just closed. We had one of the most successful ever held in the South. It was indeed the quality show of the South. Birds of rare quality competed for many loving cups and cash specials. There were 126 White Wyandottes that were so excellent in all that goes to make a perfect bird it was indeed hard to select the winners, and down to fifth place were "stars." In S. C. Rhode Island Reds the birds were simply of the highest class possible, a hundred in number and as red as June apples, and it took good ones to get a place. The display of White Leghorns was one of the best seen in years, about one hundred contending for the beautiful silver cup offered by Poultry Success, and it was a close race, the Pen winning, being only one point ahead of the second best and so down to the fifth, just about a point difference. The White Rocks were also a grand lot of fine birds, there being many superb specimens among the goodly number on dress parade. Our exhibit of Barred Rocks contained some gems that could win at the largest shows of our country, the barring and shape of the winners a dream of delight to the lover of this beautiful breed, and so on down the line to the little blue-blooded, bred in the purple, aristocratic Game Bantam. In this company of proud, high-stepping birds were some of the finest specimens that ever wore a feather, there being at least seven that had crossed the ocean to take part in this contest of merit and beauty. The highest scoring bird in the entire show, all varieties competing, fell to the lot of a little Pullet in the Black Red Class. She was a dream in color, style and shape. The ten highest scoring birds in the show also fell to the Black Red Game Bantam Class. Special mention should also be made of the Buff Rocks, Columbian Wyandottes, Buff Orpingtons and Black Minorcas classes. Our show was the talk of the town and the best feature of the Georgia Carolina Fair. Next year we hope to do still better, give larger prizes, employ more judges and have an up-to-date show in every detail.

Yours in love with the fancy,
W. C. CLECKLEY, President.

AWARDS.

BARRED ROCKS—H. 1, ck. 1, B. Frank Kelly, Cup for Best Dislpay; c 1, h. 5, ck. 3-4-5, pul. 1, pen 1, Jno. F. West, Cup for Best Display; c. 2, ck. 2, pen 2, Geo. J. Verdevey; c. 3, pul. 5, pen 3, W. R. Munday; h. 2, pul. 2-3, W. E. Wall; h. 4, Stewart & Coleman.

LIGHT BRAHMA BANTAMS—c. 1, h. 1, Belvedere Poultry Farm.

Painesville, Ohio, 12th annual exhibition January 6 to 11. W. C. Denny, judge; John J. Lynch, Secretary.

The illustration on the title page of this issue is the Black Orpington "Pride of Kent," owned by Sunswick Poultry Farm, South Plainfield, N. J. This bird was imported last year before the Madison Square Garden Show and had the honor of capturing the silver cup for the best Orpington in the show.

Mr. George May, manager of this farm, called at the office and states he expects to show a good string at the coming Madison Square Garden Exhibition, and by the quality exhibited heretofore Mr. May is a most worthy competitor.

* * *

For a show of such importance (?) as Jamestown, it is certainly too bad no catalogue was printed, as it deprived those who took the trouble to send their birds the advertising they should have had. Every mail brings us complaints regarding this exhibition. The awards in full were published in the November 15th issue of THE AMERICAN FANCIER.

In Single Comb White Orpingtons, 1st prize in the Pullet class was given to two parties, Frank S. Bullington and Ernest Kellerdass, and as our awards were taken from the official book by Judge W. C. Denny, we cannot account for the mistake. We trust that the 1st prize money did not go to both exhibitors, nor the ribbons. We have written to the Secretary for a correction in this class, but as yet have received no reply.

The November 1st issue of THE AMERICAN FANCIER gave the reason why the catalogue was not printed. We believe Mr. T. Farrar Rackham offered to print the catalogue and have it at the exhibition by Friday, but for some reason or other this was not accepted. We cannot understand why an exhibition the size of Jamestown did not arrange beforehand for their catalogue work. Surely this could have been printed on a few pages, and we should think it would have sold at a profit.

We are sorry to state that we have no copies left over of the November 15th issue containing the awards in full. We have had hundreds of letters from different parts of the country requesting this issue.

* * *

Two noted poultry plants will be disposed of during the next month or so. The Gedney Farm of White Plains, N. Y., of which Mr. Frank Gaylor is manager of the poultry department, and the Willow Brook Farm, owned by Mr. Davis. These two farms have both been prominent in the poultry world and have shown extensively during the last few years.

* * *

The Live Stock Tribune of Los Angeles, Cali., have announced that in the handling of poultry show awards they will give the full list in accordance with the show records, regardless of who makes the winnings. We are glad to learn that they are going to do this. Of course a paper cannot publish the awards of all the shows, but when a show is reported the list should be complete without favor to anyone. Get quality and quantity in your subscription list and you will not have to write puffs and give exclusive winnings of advertisers only to bring them returns. It is the subscribers of a publication which make the advertisements pay.

The Live Stock Tribune received the following letter from one of their subscribers who is an advertiser: "Let me congratulate the Live Stock Tribune on its square and sensible attitude toward the subject of publishing complete reports of poultry show awards, as stated editorially in the October issue. The policy followed by many poultry journals of printing garbled, incomplete lists of prize winnings, excluding the names of all who do not happen to be among their advertisers, is dishonest in principle and disgusting in practice. It is an imposition on subscribers, reflects discredit on advertisers, tends to belittle the standing of shows, and is in all respects thoroughly contemptible and unsportsmanlike."

THE AMERICAN FANCIER publishes only complete list of awards, and many of our subscribers and advertisers have endorsed our method. The following is an extract from a long letter written us by Mr. Henry M. Collier, Tacoma, Wash., a well-known Western fancier and poultry judge: "Some papers only publish the winnings of their advertisers. This may look like a good business policy on their part, but as far as I am concerned I want to say, as an advertiser, I would much prefer that the whole report of the show went in than to just have my awards printed." Mr. Collier writes considerably more on the subject, but space will not permit our quoting any further.

* * *

While the prices of railway and other stocks and bonds are going down, the price of eggs is going up, and in some cases has gone up to 75 cents a dozen. There is no reason for any retailer to charge this price. A number of new-laid eggs come to the New York market from near-by poultry farms for which high prices are obtained, but these do not form 1 per cent. of the egg supply. The great bulk of fresh gathered eggs come from the far South and West. They are a mixed quality and sell from 25 cents to 33 cents a dozen wholesale. When handled by dealers the full, fresh eggs bring about 35 cents to 39 cents to retailers, and they should retail at about 40 cents to 45 cents a dozen. This market is now consuming between 45,000 and 60,000 cases of storage eggs a week, wholesale prices ranging chiefly from 17 cents to 18½ cents.

* * *

Dr. W. C. Cleckly, well known in Bantam circles, has imported a few Black Breasted Red Games.

The doctor has shown at New York before and maybe will spring a surprise this year.

* * *

In the awards of the Allentown Fair published in THE AMERICAN FANCIER, we by mistake gave D. J. Koons 1st cockerel White Plymouth Rocks. this prize was captured by C. C. Burrough who captured the $5.00 special for best White cockerel and silver cup for the best Rock in the show.

Secretary Poultry Show:
Dear Sir:

In accordance with resolutions adopted by the American Poultry Association, you are invited to send to me as Secretary of this Association, a certified list of the number of entries of each breed shown at your show this season, for which the regular entry fee shall have been paid.

In order to make this more convenient for you and to have these lists in uniform shape, I take pleasure in enclosing a blank form, which I am going to ask you to fill out and send to me just as soon as you have the necessary information.

On April 1, 1908, all lists coming in to me shall be added up and the breed that was exhibited in the largest number of shows thus reported on, all standard varieties of each breed to count, shall be supplied with the first separate breed standard by the American Poultry Association.

Thanking you in advance for your attention to this, I am

Very truly yours,
Ross C. H. Hallock,
Secretary American Poultry Asso.

THE BOSTON SHOW.

Many of the strong specialty clubs will meet at Boston this year, among them being the American White Wyandotte Club, the American Buff Wyandotte Club, the National Houdan Club, the Rhode Island Red Club, the Hamburg Club, and the Eastern Langshan Club. All of these clubs and many others offer valuable specials.

While the judge's list is not complete, the following have already been decided upon: Miss Sophia Pitchlynn, Leghorns; T. F. Rigg, Houdans and Rhode Island Reds; C. A. Wheeler, Light Brahmas; W. R. Graves, White Wyandottes, Sharp Butterfield, Cochins, Dorkings and ornamental Bantams; E. H. George, White Plymouth Rocks; F. W. Rogers, Partridge Wyandottes; George H. Dexter, Black Minorcas; R. Oke, Orpingtons and Langshans, and J. M. Cutting, Waterfowl.

Premium lists and entry blanks may be obtained by addressing the Boston Poultry Association, 30 Broad St., Boston, Mass.

The Philadelphia Poultry, Pigeon and Pet Stock Association will hold its second annual show at Philadelphia January 21st to 25th, inclusive. Each member of the association is working hard to make it a success, and as there are about 135 active members in the association, it means that they are doing things. Liberal cash and special prizes will be given. This year the fee has been raised to $2, on account of last year more entries being received than could be accommodated. The increase in entry fee will mean quality in preference to quantity. The prizes won at the Philadelphian Show will be worthy of the endeavor and will be good advertisements for any breeder to get. The judges have been carefully selected and each one is competent to judge the class on which he will place the awards. Many requests for premium lists have been sent the Secretary from the eastern states and as far west as Indiana. Those desiring premium lists should write at once to Leslie Jeffries, Bridgeport, Pa.

* * *

The Kingston Poultry Show, December 18, 19 and 20, will be larger and better than any one in the past. Twenty dollars is offered in special cash prizes for B. B. R. Game Bantams as follows: Five dollars best pen, $5 largest and best exhibit, $3 best Cock, $3 best Cockerel, $2 best Hen, $2 best Pullet. Five dollars is also offered for largest and best display of Game Bantams of all varieties. Clarence S. Rowe is secretary.

ROCHESTER SHOW.

The regular monthly meeting of the Genesee Valley Poultry and Pigeon Association was held at Lathrop Poultry and Pet Shop on November 8, 1907.

From present indication I can safely say that our coming show, which will be held during the week of January 13th to 18th, 1908, will be an event never before equaled in this vicinity.

Enthusiasm is at its highest pitch, and the members are leaving nothing undone to make the show a success in every way.

Arrangements have already been completed to hold a Poultry Institute in connection with the show, and every visiting fancier will be assured of a good time. A banquet will be given during the show, and every exhibitor is most cordially invited to be present.

The coming premium list will be ready for mailing on December 1, and it is a book worth having, and we earnestly request you to send for one to F. A. Newman, Box 472, Rochester, N. Y.

They are free for the asking and furthermore they will prove to you that it is worth your while to come to Rochester yourself. Send your best specimens and win some of the valuable specials and the numerous silver cups and cash specials offered.

The Lynn Poultry Association will hold its eleventh annual show January 7, 8, 9 and 10, in Casino Hall, Summer Street, one of the best lighted halls in the state. In connection with the poultry show we will hold one of the best pigeon shows in New England, the American Pigeon rules to govern. Mr. George Feather will judge fancy pigeons; the Homer judge will be announced later. Mr. A. C. Smith, W. B. Atherton, W. B. Card and George P. Coffin will judge poultry.

Yours truly,
Chas. E. Waterhouse.

The Fence Town Fanciers Club, of Adrian, Mich., was the first Michigan poultry organization to join the American Poultry Association. They offer you, Mr. Exhibitor, many new reasons for making an exhibit at their show. The grand silver medal and diplomas of the American Poultry Association should be a much-coveted prize, and in addition they have many special prizes, some of which are a Victor talking machine, an incubator, silver cups, clocks, silverware and merchandise in great variety. At the same time liberal cash premiums are paid and the ribbons are of a special design, different from any ever offered by any club heretofore, something that everyone will want on their banner of ribbons. J. E. Holyoke is Secretary.

The American Plymouth Rock Club will hold its seventeenth annual meeting in connection with the New York Show at Madison Square Garden on Wednesday, December 18, 1907. All members and fanciers are cordially invited to attend. H. P. Schwab, Secretary, Irondequoit, N. Y.; Dr. O. P. Bennett, President, Washington, Ill.

* * *

The National Golden Wyandotte Club of America will give four ribbons at each of twenty-five of the leading shows of the United States and Canada this winter. These ribbons are to be competed for by club members only. All breeders of this variety are urged to join the club now and compete for these prizes. A. W. Davis, Secretary, Big Rock, Ill.; Ira C. Keller, President, Prospect, O.

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

NOTICE TO ALL BUFF WYANDOTTE BREEDERS.

The American Buff Wyandotte Club calls attention to the fact that the annual meeting of the club will be held at Boston, Mass., January 16, 1908, in connection with the great Boston Show. We desire to make this the banner club meeting and to get out the largest and best class of Buff Wyandottes ever seen together, and as an inducement to breeders to show there we will offer a large list of cash specials, silver cup for best Cock, Hen, Cockerel, Pullet and Pen, ribbons, etc. All members of the club should do something to insure the success of the meeting by sending birds or donating to the specials. Those not members should join the club and help us push our favorite breed to the front.

Our annual catalog will soon be out, and it will be by far the best one the club has ever put out. Every breeder of Buff Wyandottes should send for a copy, for it will be worth having. Those who will join at once will have their names in the book, and it is certainly worth something to be on this list of select and active breeders of Buff Wyandottes.

Members of the club who have not sent in their dues should remit at once and save the secretary a lot of work and the club a lot of expense. None should drop out of the club unless they have a particularly good reason for so doing. If there are any who are not going to stay with the club they should write at once to the secretary resigning and give their reasons for so doing.

We trust that the Buff Wyandotte fanciers of this country will rally to the support of the club, for we are making an earnest effort to advance the interests of the breed, and desire and deserve the support of every breeder. Send $1 to the secretary and become a member and thus get a proper standing before the fanciers of America. For particulars in regard to the club address the secretary, Henry R. Ingalls, Greenville, N. Y.

RECEIVED ORDERS FOR ALL SURPLUS STOCK.

Granville, N. Y.

I have received orders for all my surplus stock through the ad. in your paper. Think it money well invested.

Yours respectfully,
CHARLES ANDRUS.

AMERICAN BLACK MINORCA CLUB MEETS WITH THE CLEVELAND, OHIO, POULTRY SHOW.

At a recent meeting of the Board of Directors of the American Black Minorca Club the vote was unanimous in favor of holding the next annual meeting of the club with the Cleveland Poultry Show. Thirty-nine new members were added to the club, and we now have another long list of applications for membership to vote in soon. The club is now collecting specials to offer at its meeting, and all signs point to a profitable and interesting gathering. All reliable breeders of Single Comb Black Minorcas are invited to join the club, share its benefits, exhibit at the annual meeting and compete for its specials. The club also gives many silver cups this winter to be competed for in different states. The secretary will be glad to send application blanks to all who write for them.

Frank M. Grann, President; George H. Northup, Secretary-Treasurer, Raceville, N. Y.

AMERICAN POULTRY ASSOCIATION.

Executive Board Meeting.

By order of President C. M. Bryant, a meeting of the Executive Board of the American Poultry Association will be held in New York City Friday morning, December 20, at 10 o'clock.

It is expected that some very important work will be planned at this meeting. Also all applications for membership received up to that time will be acted upon by the board.

Ross C. H. Hallock, Sec'y.

The Auburn Association will hold their show at Auburn, N. Y., January 27 to February 1, 1908. The following judges have been engaged: Geo. W. Webb, H. J. Quilhot, D. M. Green, M. Davenport, Allan F. Hill and Clarence W. King. J. H. Scott is Secretary.

INCUBATOR COMPANIES CONSOLIDATED.

The companies entering the consolidation are the Star Incubator & Brooder Company, Pineland Incubator & Brooder Co., Excelsior Wire & Poultry Supply Co., Empire Star Incubator Co., Great Eastern Incubator Co., Star Manufacturing Co., and the North Western Poultry Supply Co. We are informed that several other concerns are now under consideration.

The manufacturing places of the different companies will all be closed with the exception of that of the Star, and all the manufacturing will be done at Lincoln, N. J., where they have a large tract of land adjacent to the railroads. The retail business and general offices of the company will be at 26-28 Vesey Street, New York City. The officers are: L. S. Bache, President; C. E. Paxton, Vice-President, and Wm. V. Russ, Treasurer.

The ill-effects and anxiety caused by frost-bitten combs in the CURTAIN FRONT POULTRY HOUSES OF UP-TO-DATE POULTRYMEN are entirely eliminated by the following mixture:

℞	Laudanum,	- -	30 drops.
*	Creogum Compound,	-	60 drops.
	Goulard's Cerate,	-	1 ounce.

Mix. Apply to the effected parts 2 or 3 times daily.

* Creogum Compound is a scientific combination of antiseptic organic substances combined in the proper proportions to form an entirely new medicinal compound. It is put up only in 60 drop vials, and use only according to the above formula. Price, postpaid, 35 cents.

MANUFACTURED ONLY BY
GEO. A. SIMMONS, PH. G.,
P. O. BOX 1094 **PENN YAN, N. Y.**

During the month of December many of the large shows will be held. Providence has for the past few years brought together a good entry in the pigeon section. Mr. C. E. Twombly will place the awards and should have his hands full, especially in the Dragoon Fantail and Homer classes.

Paterson, N. J., holds their exhibition the same dates as Providence, December 3 to 7. W. J. Stanton has been selected to judge the pigeons.

* * *

Considerable comment regarding the judge and judging of Homers have appeared in recent issues of most all pigeon publications.

True, the Homer is a hard bird to judge, but for one qualified it is the same as any other variety of the pigeon fancy. The real cause of dissatisfaction among the fanciers in this variety is their selection. New York and Boston should both have judges who are up-to-date and capable of passing opinion on the real Homer of 1907.

The present typical specimen is certainly a new creation, and unless one is well read on this type it is useless to believe he can please the majority at our coming exhibitions. Around Boston Homers have been imported and bred to a great extent and one would believe there should be at least two who can creditably handle the stick.

* * *

We have just received a letter from Mr. George E. Gray, of London, stating it will be impossible for him to judge the fantails at New York this year, but if nothing unforeseen happens he will come to America in 1908.

We only hope it will be possible for Mr. Gray to come to America next season, as we believe he would be a factor in bringing together a grand display of fantails.

* * *

Magpies a few years back was one of the leading varieties. Last year at New York some really good specimens were shown, but the number was nothing alarming. Mr. George E. Rowland entered Magpie alley with some grand specimens. Since that time the variety has greatly fallen off. It appears in most all varieties when an exhibitor imports noted winners and purchases the best on this side, it has a most disastrous effect on the fancy instead of benefiting it.

* * *

We understand four of the best White Fantails in England will be imported for the coming New York Show. Every year we have the pleasure of comparing a few of the best raised in England with our home-bred birds.

* * *

The American Swallow Club will hold its annual meeting and exhibition at Cleveland, O. Already numerous specials have been offered and a grand display is expected. All breeders of swallows should join the club. Mr. L. A. Jansen, of Milwaukee, Wis., is Secretary and Treasurer.

* * *

The newly formed Helmet Club has elected the following as officers: President, C. Krueger; Vice-President, L. Lincoln, Jr.; Secretary and Treasurer, A. E. Robst. The first meeting will be held at the coming Boston Show. The annual dues are only $2, and $1 initiation fee. We hope every fancier interested in Helmets will join the club.

* * *

The Philadelphia Show promises to bring out a good entry in the pigeon section. Messrs. Erbe, Oliphant, Scholes and Diston will place the awards in this department.

Philadelphia has held some fine exhibitions and this year will be no exception. Mr. Leslie Jefferis, 35 North 20th Street, Philadelphia, is Secretary, to whom all should write for premium list.

* * *

THE WESTERN TUMBLER CLUB.

The result of the election for judges for our next meet in January, 1908, at Chicago, is as follows: For judge—Muffs, George J. Asman, Detroit, Mich.; for judge—Clean Legs, Howard J. Young, Buffalo, N. Y. Everything points to a large and successful show. All Tumbler breeders are invited to join us. The fee is $1 and the annual dues $2. Send your name and address and money order for $3 and you will be cordially received, and will be allowed to compete for club specials if you act promptly.

D. W. JOHNSON, Sec'y,
2683 N. Ashland Ave.,
Chicago, Ill.

CHICAGO POUTER CLUB MEET.

Last year after the New York Show some fancier undertaker wrote the obituary of this club. Fact was, it did seem as if it had started down the toboggan, but when the writer gave up a few hours' time to it why I was truly, very truly surprised at the response given my calls. Members came in from everywhere, until 'twas truly a national organization. Now with its two dozen real, live, progressive members are going to show at Chicago, and they are going to show the fancy at large that this is the most animate dead 'un that ever existed. The special offerings are going to be such that every one is going to have a chance, and while they are not all in at this writing, they are coming in, and will be served up to the members as a whole when the offering is complete. Now, fellow-members, I have given up a few hours to the benefit of this club and I am going to ask you (and I know you are going to respond most liberally with entries for this show) if you cannot attend. You can send your birds, and in sending them you can rest assured that they will be well cared for. Cages will all be locked after judging and remain locked during the show.

From the present outlook this show will be the best ever held by the Pouter Club, and promises to be a record-breaker. That means that we expect to muster in an entry of 265 birds. If it falls below that I will be disappointed; but with "Ohio" on the spot with entry exceeding 100 birds I think a record-breaker is in order. Now boys don't have any previous obligations; you owe your entry to the Pouter Club and if you give it, I shall consider my work has not been in vain.

E. B. PAGE, Sec'y,
Everett, Mass.

THE TRUE MAGPIE.

It seems to be generally admitted amongst fanciers that the Magpie was originally of the Tumbler family. In fact, one only needs to give a few Magpies their liberty, and after a few weeks it will be noticed that many of them have the same flight, and go through similar maneuvres as would a group of young Tumblers just before they learn to tumble properly. I do not, however, intend to go into the past history of the breed, or to say to what fanciers we are most indebted for the excellent Magpies one sees at the principal shows of the present day, but there is no doubt this variety is one of the most beautiful and popular breeds now before the public, says W. R. McCreath, in the first issue of Pigeons, being the pigeon department taken from that excellent publication, Pigeons and Poultry, England.

It might be interesting to note Mr. McCreath was the breeder of the sensational $250 Magpie Hen.

Some years ago the only colors of Magpies known to most fanciers were blacks, red, and yellows. These are still the leading colors, but to them have been added blues, silvers, duns, and creams. The type for all colors is, of course, the same. To begin with, the Magpie should be small or medium in size. A big, coarse bird, no matter how good it is in its different points, never takes my eye the same as the smart, well-proportioned lively little one. One of the dangers to be guarded against in the Magpie Fancy, as in many others, is the going in for monstrosities! Let the bird be neat and smart in appearance, and thoroughly well proportioned. There is a tendency with some men for extra long faces, while others want long necks and stilty legs. These qualities are all very necessary in their way, but care must be taken to prevent this rage for the different points turning one of the prettiest fancy Pigeons into a bird which is more of a curiosity than an attraction to the fancier. The Magpie is naturally a graceful bird, and, to use the term of some previous writers, must be ladylike and smart in its appearance.

The club has issued a standard which every Magpie fancier should read and study carefully. From this it will be seen that the head and beak should be long and fine, the former devoid of any stop or bump, and the crown as low as possible. The beak must not on any account point downwards. A down-faced bird is, in my opinion, a rank bad specimen. What is wanted is the point pointing horizontally. If the beak is well carried it goes a long way to improve the expression and general appearance of the bird. The wattle must be fine and silky in texture, and, together with the beak, should be of a pinky hue. The eye should be fairly well back in the head, and as nearly in a line with the end of the beak as possible. The pupil should be jet black, surrounded by a white iris.

The finishing touch to a Magpie, provided, of course, all other points are good, is its eye cere. This should be of a bright coral color, and fine in texture. Pale-cered, dull-eyed birds, no matter how excellent in other respects, never have the same finished and atractive appearance as their more brightly furnished opponents in the show pen. The head should be narrow between the eyes, and, in fact, when looked at with the beak pointing straight at you, should look like a very fine wedge. The space between the eyes and end of the beak should be well filled in, and devoid of any hollow, or what is usually called "pinched face." One does not want the strong muzzle of a Show Homer. The face should be similar filled in, but on finer and more delicate lines, always remembering to avoid any tendency to a Roman nose or down-face.

The neck must be long and slender, joining the head in one unbroken curve at the back. There must be no semblance of gullet or throatiness. What is wanted is a bird cleanly cut out below the beak, and, if possible, showing its cheek bones prominently. This is rather a curious expression to use with regard to a pigeon. All the same, if the skin of the head appears tightly drawn from the base of the under mandible, it gives the head the lean, smart appearance which is wanted.

Now I come to what I consider one of the most important points of a magpie. That is, the way the base of the neck joins into the body. Many good birds are, in my opinion, spoiled entirely for show purposes because their necks run right down into the middle of their backs; in fact, they are what I call bell necked. The base of the neck should fit into the top of the shoulders, almost as if it had been placed in a hole bored for it. But, at the same time, it should join the body without any sharpness or angle. The way the neck joins the body has more to do with the smart appearance of the magpie than many points on which greater stress are laid.

The carriage of the magpie is another very important feature. The bird must be lively and alert in its appearance, carrying its shoulders well forward, with the wing butts standing out from its side. A bird with its wings tucked tight in by its side is not, in my opinion, correct. From the shoulders the body should gradually taper away towards the tail. The latter must be tightly folded, and with the tips of the wings resting on it, carried just clear of the ground. The body should be set on a pair of legs of rather more than average length; but this point must not be carried to extremes. The legs want to be just of a sufficient length to enable the bird to show off the shape of its body and carriage, and take away all appearance of heaviness or clumsiness. A short-legged, heavy-bodied bird is to be avoided at all costs.

In obtaining the points just mentioned, one must not forget that the color in a magpie is one of its most beautiful properties. The marking of the bird is well adapted for showing off the contrast between the white and colored portions of the plumage. It is, therefore, essential that the color of the bird should be of the best. In blacks one really gets the finest specimens of the breed, and it is generally admitted that they are still a good way in advance of the other colors.

(To be continued.)

THE WORKING HOMER FOR THE SHOW PEN.

I take the following characteristic properties for the worker from birds that I have seen in the show pen, says Mr. J. O. Cresswell in Feathered World. As there is quite some comment on the judging, etc., of this bird at the present time, we publish this article—birds that have won and are still winning at the present day, and readers will say the same when they read this article carefully.

For instance, a Working Homer's headpiece should be as shapely as can be, no flatness on top whatever, with a nice straight face but not a long face. A straight, long face is no use,

for that is too much after the Exhibition Flying Homer type. I may here say that I am an admirer of the Exhibition Flying Homer, also the genuine Flying Homer, the Show Homer, and the Working Homer for the basket. My experience emanated from the true Working Homer, having kept them when a boy.

The beak should be fairly stout, straight set, both mandibles of nearly equal substance, the wattle to be fine, and one that will last, not go coarse quickly. The eye to be of a sparkling pearl, very bright. A white eye I do not like, and it is most objectionable, especially in blues, and when they have a pale cere it gives the bird a sickly look. The cere should be small, hard, finely laced. Birds heavy in cere are greatly handicapped. It makes the exhibit look heavy about the head.

The neck should be of medium length and thickness; a reachy, racky bird is of no use for the show pen. The back short, tapering off to the tail. Body: This is a most important item that goes towards making up of a perfect specimen. The body should have plenty of muscle, not fat; plenty of front, as hard as iron; feathering to be tight and short about the body; no looseness whatever; not such a bird that when you get hold of it appears as if you had nothing else but a bundle of feather, like a feather bed. You know how soft that is. Many exhibitors make a mistake here, more to their sorrow.

Then again, the wings should be powerful, and have prominent, substantial butts. The wings should not be shallow, but a nice shape, with plenty of cover; and do not forget the cover, for it is an important item. The flights to be short and broad, not too short, the quills of flights strong. Weak quills are a great failing.

A very important item—in fact, the most important characteristic of a Working Homer—is tightness of feather. Many fanciers are at a loss to know what tightness of feather means. Some may say it is ridiculous for me to say such a thing, but it is an absolute fact. If you want to see if a bird is tight feathered, handle him, have a feel, pull his wing out, and if this does not go back into its place as quick as lightning with every flight feather in its proper place, it is a sure sign that the bird is not in condition, and if the bird is not in condition it cannot show its tight-featheredness.

The Working Homer is noted for its tightness of feather, and if any judge overlooks this important item I do not think much of his experience.

With regard to the tail, it should neither be long nor short, but of medium length. A long-tailed bird in the show pen does not look well; in fact, it carries too much extra luggage, as I term it, and as regards a short tail, it does not suit the Working Homer, and gives ground for suspicion that there has been faking, which is done, as I have detected cases. As regards the number of feathers in the tail, some fanciers may not have taken particular notice as to how many there should be, but if they handle any Working Homer and find less than twelve feathers in the tail, and those not their natural length, there is something wrong. Again, when you see birds exceedingly short-tailed (especially in two-year-olds) in comparison to the length of body, wings, and flights, have a good look at them. Experience puts one up to the tricks of the trade, and I am always open to tell a wrinkle or two, picked up in my travels round the shows, at which I have had the pleasure of handling some of the finest specimens that ever went into the show pen.

But, to get back to our subject, the legs of the Working Homer should be muscular, clean, and medium length, not leggy. The carriage should be erect and soldier-like, a crouching, sulky-looking bird looks too much like a bundle of feathers. The Working Homer is a very alert bird, so he should look business-like in the pen.

If you possess a good bird that has the great failing of poking its head through the pen wires on all sides of the pen, put it between two cocks, two old stagers, they will soon teach it to give up the habit.

A very important item in the making up of a good bird is size. I like a big bird, but not too big, let its size be in keeping with its other properties When a judge takes a Working Homer out of the pen he likes something to handle, or it is a case of "not enough of it." Color, again, I like to see good and very distinct on a bird, the chequering on the reds and blue chequers to be bold, and not poorly chequered, the blues and mealies to be of a nice, clean, bright color, the bars to be wide and well defined, with a beautiful gloss on the feathering, showing the condition and quality of the bird. I have often seen badly-colored birds at shows, a very bad fault, and one that the fancier when mating up should take into consideration, and by selective mating bring out the good color. I always make it a rule to see to the colors striking properly, so as not to get badly-colored birds, and every bird that I have exhibited is of good color, especially in red chequers.

MICE IN THE LOFT.

RED PEPPER AS A DISPERSER.

Almost every Pigeon fancier has had his experience with mice in the pigeon lofts—he is lucky if he has not had more serious experience with rats also. Where Pigeons nest, mice like to nest, and they build rather more prettily than the pigeons, who as nest builders are not very artistic. It is well to have no closed-up crannies in the pigeon lofts. The simpler the plan the better, and the more thoroughly every part of the loft is cleaned out on cleaning day, the better. Cats, of course, cannot be introduced into the room where pigeons are, nor can poison. Traps may be set in the places where the pigeons cannot meddle with them, but the mice are often so well fed (on the pigeon's food) that they do not readily go into the traps, says Pigeon and Poultry.

The writer has found red pepper to be a simple and harmless disperser of mice. A mouse has no other way of cleaning its paws but by licking them, and the paw that is peppered soon finds its way to mouth and eyes, with results that may be imagined. If you find a mouse or rat hole, blow into it a little red pepper with an insect powder gun. It is a good plan to mix a liberal dose of red pepper in thick whitewash, and to whitewash a band a few inches wide, where the floor and walls meet. Mice are sure to run along the floor close to the wall, and the pepper will stick to their feet. Or a mixture composed of an ounce of red pepper in a quart of boiling water may be made, and will be as effective as the whitewash described above.

Neither mice nor rats gnaw wood that is smeared with it. If the pepper is sprinkled dry about the floor, the wind of the pigeons' wings will fan it about, and the pigeons will not like it, but it is safe to use it in solution. Rats are a much more serious problem than mice, and a neighborhood infested by them is a very bad place for pigeons. With care and the use of red pepper, mice need never gain much headway. S. M. H.

DUCKS

WE HAVE 175 HEAD OF MAMMOTH Pekins of good quality and size to offer you and will expose some facts concerning them. They are from five to seven months old, and will lay nearly as early as two-year-olds and keep at it as long as the old ones. Then these eggs are worth more per dozen on the market than Hens' eggs and the young ducks bring from 15 cents to 20 cents per pound when 10 weeks old, selling for 60 cents to $1 each. They are raised easy, too. Can you make money easier? Now, we know you want some, and so will charge you $1.50 each and give you a discount on 3 or more. If they are not as represented or don't please you, send them back at our expense, and your money will be refunded. When ordering please state just what you want. Joyce Bros., Penfield, N. Y.

MAMMOTH TOULOUSE, EMBDEN AND White China Geese. Black Cayuga and Rouen Ducks. White Plymouth Rocks. Pure Guineas, Bronze Turkeys all bred from my first prize winners at Madison Square Garden, New York. If you want prize winners or breeders I can please you. Clarence W. King, Romulus, N. Y.

JERSEY STRAIN PEKIN DUCKS—WON first prizes last season at Bridgeton, Paterson and Philadelphia Shows. We now have some very choice, extra large young Drakes to offer at $2.50 to $3.50 each, that will surely please you. Also White Rock Cockerels. Springer Bros., Route 4A, Bridgeton, N. J.

MAMMOTH PEKIN DUCKS FOR SALE, $1.25 each, $2.25 per pair, $3 trio. H. Dotzert, Petersburg, Ill.

MAMMOTH PEKINS. UNEXCELLED IN size. Winners for myself at Auburn, Rochester, Waterloo and New York State Fairs. For my customers at dozens of Fairs and Shows, including Madison Square Garden and Jamestown Exposition. No better Pekins in America. Drakes, $1.50 to $5 each. Le Roy W. Seigfried, Waterloo, N. Y.

INDIAN RUNNER DUCKS. CHAMPION layers. White egg strain. Rouen Ducks (Domesticated Mallard), best table Duck. Mammoth Pekin Ducks, best general market Duck because of size and color. Eggs, $1 for twelve, single or assorted varieties. Forward money order with order for eggs. Order early. John M. Mott, South Haven, Mich.

RHODE ISLAND REDS

FOR SALE—20 ROSE COMB AND 20 SINGLE Comb Rhode Island Red Pullets at $1 each, April hatch, now laying. They are dandies; order early and get the pick of the flock. L. O. Mayer, Millersville, Pa. Route 2—Box 32.

R. C. R. I. REDS TUTTLE STRAIN. 100 Pullets, 50 Cockerels. Breeding and exhibition birds, $2 and up. Also 25 utility Pullets, $1 each. Farm raised. Shipped on approval. M. B. Gould, Granville, New York.

SINGLE COMB RHODE ISLAND REDS, AS good as the world produces. Tompkins strain, grand surface and under color. Fine every way. Low prices to immediate buyers. Can give you more quality for less money than any breeder in America. Enclose stamp. Geo. Wolf, Seneca Falls, N. Y.

THOSE INTERESTED IN REDS SHOULD write Mr. Fattig their wants. He has a strong show record to his credit, winning the "lion's share" wherever shown. All stock sent on approval. Mention American Fancier when writing. Thiells, N. Y.

ANCONAS

MAINS' STRAIN OF ANCONAS HAVE proven their quality at Madison Square Garden, N. Y., Hagerstown, Md., Allentown, Pa., Newark, Dover and Morristown, N. J. Finest exhibtion stock a specialty for the fall and winter shows. Frank W. Mains, Morris Plains, N. J.

PET STOCK

MARL RIDGE RABBITRY OFFERS A FEW choice breeders imported stock in Belgian Hares, Flemish Giants, Angoras, Himalayans, and Dutch Rabbits. Peruvian smooth, Dutch-marked and tortoise and white Cavies cheap. Am closing out all Cavies. R. M. Wills, Hornerstown, N. J.

BRAHAMS

EAST VIEW POULTRY YARDS, Box F. Ballston Spa, N. Y., have Light Brahmas of quality, scientifically bred for exhibition and business and win at many of the leading shows. They have color, style, size and feathering fit to grace any yard and will give satisfaction, we guarantee. Prices promptly mailed.

DOMINIQUES

AMERICAN DOMINIQUES—I BELIEVE I now have in my yards the best strains of American Dominiques in the world. The purest blood that Washington County, N. Y., can produce (and this breed has been kept there for well-nigh 100 years). The L. M. Jones Strain, bred in Oneida County, N. Y., for over 50 years. The Darlington-Yerkes Strain, bred in the vicinity of Philadelphia, over 65 years. And last but not least, the W. H. Davenport Strain, which represents the best that New England has to offer. I have carefully mated up six Pens from the above strains, and will offer eggs for hatching during the season of 1908. The Dominiques, the oldest American breed, and the best all-purpose fowl, are rapidly coming to the front again; a club has been organized, and at least 100 breeders have now taken them up, and we are looking for a big sale of eggs and stock during the coming year. Cut out this advertisement, and keep it for future reference. No surplus stock on hand now. Dr. W. H. Harwood, Chasm Falls, Malone, N. Y.

TURKEYS

BRONZE TURKEY RAISERS WHO WANT quality. More finely marked, more vigorous specimens never grew. Quality or no sale. Your money back if not highly pleased. Must be seen to be appreciated. Your order solicited. J. Bert McConnell, Ligonier, Ind.

BRONZE TURKEYS. WINNERS OF MORE first prizes at Madison Square Garden than any 4 strains in America. 200 young birds of grand size and color. Mated not a kin. Stamp for reply. Geo. Wolf, Seneca Falls, N. Y.

JAVAS

BLACK JAVAS—ONE GOOD COCK AND A fine lot of big, growthy Cockerels. Bred from winners, fed right, hatched early and for sale at moderate prices. Write me your wants. Charles Gilmore, York, Livingston Co., N. Y.

COCHINS

WHITE, BLACK AND PARTRIDGE COCHins. Winners at Madison Square Garden, New York, January, 1906. (Black) Cock 1st, Hen 1st, Cockerel 2nd, Pullet 1st. Indianapolis, Ind., January, 1907. (Partridge) Cock 1st and 2nd; Hen, 1st and 2nd; Cockerel, 2nd; Pullet, 1st; Black Cock, 1st; Hen, 1st; Cockerel, 1st; Pullet, 1st. Grand lot to offer for show room or breeders. Address for circular. Mention American Fancier. D. C. Peoples, Uhrichsville, Ohio. Lock Box 1197.

HOUDANS

MY HOUDANS WON AT TOLEDO, 1ST AND 2nd Cockerel, 1st and 2nd Pullet, 1st and 3rd Hen, 1st Pen and Silver Cup. At Pittsburg 1st Cockerel, 1st Pullet, 1st Hen, 1st Pen. Scored by McClave 96½, 96, 95½, 94½ and 94. Cockerels to sell. No females. Scott Clark, Sullivan, Ohio.

MISCELLANEOUS

SHADY LAWN POULTRY FARM—IF YOU want the very best stock or eggs of White, Silver, Golden, Partridge, Buff, Columbian, Silver Penciled Wyandottes; Barred, Buff Rocks; Langshans, Hamburgs, White, Brown, Buff Leghorns; Guineas, White Turkeys, Pekin, White and Colored Moscovey Ducks; Toulouse, White China Geese. At the Lycoming county fair on 40 entries won 27 firsts, 10 seconds in a large class. Fine catalogue for stamp. B. F. Kahler, Hughesville, Pa.

WHITE ORPINGTONS AND WHITE ULYmouth Rocks. Pullets and Cockerels, from leading strains; strong, healthy and well matured, some yearling Hens, pair Ring Neck Pheasants. Prices reasonable for quality of stock. J. Rosenthal, Dumont, N. J.

DR. HARWOOD, CHASM FALLS, MALONE, N. Y., breeds the best in American Dominiques (the real old Dominique); Columbian Wyandottes (McIntosh's & Parrish's Strains); Silver Penciled Wyandottes (Wyckoff's and Arnold's Strains); and Light Brahma Bantams (Frede's and Hoyt's Strains); new circular in January. Surplus stock for this season all sold except some grand Dominique Cockerels and Light Brohma Bantams.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans wefe awaded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got Two regular and one special Prize, including 1st Cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at ***Madison Square, Toronto, Guelph, Chicago*** and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, Drawer F, Penbrooke, Maine.

President, American Houdan Club, From 1900 to 1907.

The American Fancier

VOL. XXVII NEW YORK CITY, DECEMBER 15, 1907 No. 693

Some Interesting Experiments on the Use of Grit for Fowls

(Written expressly for the American Fancier)

BY REV. C. E. PETERSEN
President American Houdan Club, 1906-1907

IT has been stated again and again that the common fowl is graminivorous; and the general belief that this statement is correct has led to more than half of the failures recorded in the poultry business, and particularly so, when the procuring of as many eggs as possible was the chief and only object worked for.

The fowl, however, is not only omnivorous, but, unlike many other omnivorous creatures, it cannot keep in good health, and at the same time be a profit to its owners on any one kind of food.

A pig will flourish on grain alone, grass and almost on meat, but poultry must have all of these three to do well at all, and besides, mineral matters must be added as well.

When poultry has been closed up for any length of time, and grit has been withheld, the first thing they will do as soon as liberty is regained, is to greedily devour anything that will supply the mineral matter that they have been without during the confinement, gravel, stones, broken pieces of crockery ware, and even glass.

That grit is necessary for the welfare of poultry we all know, but curious as it seems, it took a great many years and some of the world's noted scientists to find out the whys and the wherefores of this matter, and even with the information we have today still opinions differ.

The commonly accepted opinion, that it is a means by which the fowl grinds up its food, which largely consists of hard grain, does not seem to be the conclusion that experimenters arrived at, for in the many experiments made it was proved that the food would be ground up and assimilated without any grit deposit in the gizzard.

Though it would be of more than passing interest to know the difference in time between grain assimilation with and without grit.

"Hens teeth" we all understand to mean grit, but in reality the hen's teeth is her gizzard, for as fowls are not furnished with the necessary apparatus for the mastication of its food, they require other means for its trituration. Therefore any substance that has gone through the crop in a solid form, is again acted upon by the gizzard by so bruising them that they become digestible.

The unbroken grains passing from the crop into the proventriculus cannot be acted upon by the gastric juice as this secretion is incapable of dissolving their coating of cellulose.

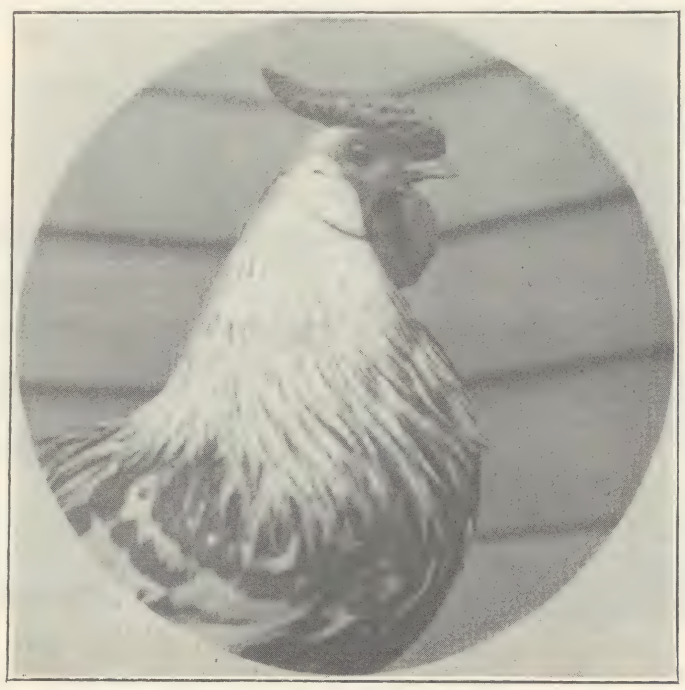
(The gastric juice contains hydrocloric acid, pepsin and a milk curdling ferment.)

The grains then pass into the gizzard, where they are comminuted between the muscular walls, while the gastric juice secreted by the proventriculus, flowing down into the gizzard, acts readily upon the proteids exposed by the breaking up of the grain envelopes.

A great many interesting experiments made to discover the causes and effects of the small stones which goes by the common name of grit, swallowed by most all of the Gallinaceous birds, including the domestic fowls, and though some of these experiments seems very cruel, it is only seeming, as the consequent results did not injure the birds.

There were, however, one Italian physician by the name of Redi, that the above statement does not apply, for to say the least, his experiments on the fowl race was not only extremely cruel, but of no particular use in the general economy of fowl keeping.

It had been stated by a good many poultry keepers at that day that grit made a part of the fowl's nourishment, and to refute this theory Redi shut up two capons with nothing but water and little pebbles for food. He found that they drank much water, but died, one in twenty the other in twenty-four days, neither one of them having swallowed a single stone.



In order to ascertain the peculiar powers of the gizzard in the grinding and the digesting of the food consumed, Lazaro Spallanzani, one of the most important figures in the history of science during the 18th century, did not think it beneath his notice to make a series of experiments that finally settled the matter as to what purpose the small stones were swallowed by Gallinaceous birds.

The following experiments are found in his two volumes of Dissertations on The Process of Digestion and published in 1780. In order to ascertain the peculiar powers of the gizzard in grinding and in digesting, Spallanzani, repeating and extending the experiments of Reaumur, procured small glass and metal balls and tubes, perforated with numerous holes, and filling them with different kinds of food, he caused them to be swallowed by our common fowls, turkeys, and other birds.

The balls having been filled with barley and other grain in their entire unbruised state, he allowed them to remain from twenty-four to forty-eight hours in the gizzard, when they were taken out and examined.

In all such cases he could not, after the most attentive examination, discover that the digestive fluid had effected the least change on the grains, though from the numerous holes in the balls they were fully exposed to its action.

The grains indeed had suffered no dimunition of size and exhibited no marks of dissolution.

Typical Head of Silver Spangled Hamburg Owned by Dr. J. S. Wolfe, Hamburg Judge at Madison Square Garden.

Similar experiments were repeatedly tried upon birds furnished with strong muscular gizzards, and the result was uniformly the same—on effect, in any instance, being produced by the digestive fluid upon the grain contained in the balls.

From these experiments proving unsuccessful, Spallanzani was led to suspect that, though the digestive fluid was incapable of dissolving the grains in their entire state, it might probably act upon them when sufficiently bruised or comminuted.

To ascertain this point, accordingly, he filled his balls with bruised grains, introducing them as before into the gizzards of various fowls; and his conjecture was partly verified, for in all the numerous trials which he made he invariably found that the grains were more or less dissolved in proportion to the time the balls were permitted to remain in the gizzard.

This goes to show that before the progress of digestion can commence the grain must be macerated, and such as are not macerated or bruised before passing into the gizzard are there subject to the action of the two strong muscular walls, with their horny firm layer on their internal surface which answers in function to a **radula;** which taken literally means a scraper.

Grew, the anatomist, long before had investigated the action of the gizzard, so far as being a mechanical structure containing great muscular power, and in his Comparative Anatomy of The Stomach, he describes it as an organ "wherein the meat, as in a mill, is ground to pieces, and then pressed by degrees into the guts as a pulp; for which purpose the deductor serves to deliver the meat from the echinus to the laboratory, as a hopper to a mill; the four grinders, or chief operators, are the millstones."

Spallanzani, again, found that when tin tubes were introduced into the stomachs of turkeys and allowed to continue there a considerable time, they were broken, crushed or distorted in a most singular manner.

"I have seen," says Spallanzani, "instances without number of such contusions, one of which I cannot forbear here relating.

"Having found that the tin tubes which I used for common fowls were incapable of resisting the stomachs of turkeys, and not happening at the time to be provided with any tin plate of greater thickness, I tried to strengthen them by soldering to the ends two circular plates of the same metal, perforated only with a few holes for the admission of the gastric fluid.

"But this contrivance was ineffectual; for after the tubes had been twenty hours in the stomach of a turkey the circular plates were driven in, and some of the tubes were broken, some compressed, and some distorted in the most irregular manner.

"I then tried the following means of preventing this inconvenience. Having perforated the circular plates in the centres, I passed a wire through the holes, and bound it tight round outside of the tubes; when the two ends met, they were twisted together; consequently, though the soldering should be destroyed, yet this contrivance would prevent the circular plates from receding from the ends of the tube, unless the wire passing through them should be broken.

"I prepared four tubes in this manner, and gave them to a turkey six months old. After they had remained a whole day in the stomach I killed the bird; and my astonishment was extreme at finding that the tubes, in spite of my expedient, were very much damaged. All the iron wires were broken, two where they were twisted, and the two others at their entrance into the tubes; the plates, so far from remaining soldered to the tubes, were found amongst the food; they were not flat as at first, but some were bent so as to form an angle, some curved, and in others one part was pressed close to the other.

"The tubes had sustained equal in-

jury; two of them were flattened as if they had been struck by a hammer, the third was moulted into the shape of a gutter, the soldering of the fourth was destroyed, and it was expanded like a wafer.

"These phenomena will less surprise those who have learned from Redi and Magalotti how ducks, fowls, and pigeons pulverize hollow globules of glass in a very short space, and even solid ones in a few days.

"I have already observed that I repeated these experiments with the greatest success. Some spherules of glass blown by the lamp, and so thick that they would seldom break when thrown on the ground, were generally reduced to small fragments, after remaining three hours in the stomachs of hens or capons; the fragments were not sharp as when they were broken by the efforts of the hand, but as obtuse as if their edges and points had been abraded by a grinding stone.

"The longer the spherules remained in the stomach, the more minutely were they triturated; so that in a few hours they were reduced to a mass of particles, not larger than grains of sand.

"The rapidity of this process appears in some measure to be proportional to the size of the bird, a wood pigeon generally breaks them less speedily than a chicken, a chicken than a capon, but a goose the soonest of all. The reason is plain since the larger the bird, the larger the stomach, and as a consequence the thicker and more powerful the grinding apparatus."

It appeared from these experiments that smooth and blunt substances, though thus violently acted upon, did not nijure the texture of the stomach, and so Spallanzani continuing his experiments, but in a different direction, however, bethought himself of trying what the effect would be if sharp pointed and angular substances were introduced into the gizzard.

A piece of rough jagged glass was introduced into the gizzard of a cockbird and he found upon examination that after twenty-four hours the angles were all broken off, without having wounded, or scratched even, any part of the stomach.

When we take this into consideration, therefore, we should not consider the subsequent experiments either revolting or cruel as no harm was done to the birds by these experiments, yet we don't doubt that this would have mattered little to the experimenter, in the pursuit of his researches to establish the extent of the power of the gizzard to break up sharp points without sustaining injury.

"Twelve strong tin needles," says Spallanzani, "were firmly fixed in a ball of lead, the points projecting about a quarter of an inch from the surface. Thus armed, it was covered with a case of paper and forced down the throat of a turkey. The bird retained it for a day and a half without showing the least symptoms of uneasiness. Why the stomach should have received no injury from so horrid an instrument I cannot explain; the points of the twelve needles were broken off close to the surface of the ball, except two or three of which the stumps projected a little higher. Two of the points of the needles were found among the food; the other ten I could not discover, either in the stomach or the long track of the intestines; and therefore concluded that they had passed out."

In another experiment, which without knowing the previous facts we might justly have deemed still more cruel, Spallanzani tells us he fixed "twelve small lancets, very sharp both at the points and edges, in a similar ball of lead. They were such as I use for the dissection of small animals.

Lawrence County Poultry Association will hold its next show on Jany. 1st to 4th at New Castle, Pa. W. C. Denny will judge, D. R. Bloodard, Secy.

American Market Duck Culture

(Written expressly for the American Fancier)

By Theo. F. Jager

If an enterprise can be done equally well along two or more differing lines or under two or more differing methods, it is as a matter of course good policy, to adopt the line of least expense in cash or labor, which is the biggest expense of all, because it never runs out. Applied to our subject, it means, that if we consider two or more farms or waste lands or tracts suitable for duck culture, we should invariably select the one that is cheapest, if all other conditions are equal. Not many persons are supposed to err in this, but strangely to relate, how many do buy and use expensive tracts, that had better produce other crops and allow waste lands within sight to remain wasted. Aside from low laying wet and sour grounds, sadly in need of draining, there is not a piece of land that can not be used successfully to grow ducks on. Of course we have good locations, others that are better, and some few that are ideal. The very best that can be had would be a southeastern slope, inclining at an angle of about fifteen to twenty-five degrees towards the plant proper from the water running at the base of the slope. The ground should be as sandy as possible to allow absorption of all impurities that cannot be washed down and away. A coarse gravel would add to the income by allowing the ducks to take a part of their grit from nature.

Shade, so essential to stock of all kinds in hot weather, is of greatest importance to ducks, who have more than any other bird perhaps cold-resisting coats of feathers and who, on the other hand, are more than any other bird perhaps, subject to the enervating influences of excessive heat. The feed we furnish them is, as a rule, strongly endowed with heat-forming elements and for this additional reason we should see to it that plenty of the deepest shade from natural sources is at their disposal. If shade of high trees, allowing a natural undercurrent of fresh air can be had, we approach the near ideal in this line. A cooling breeze will do wonders to a flock of ducks in the egg production line, when they have theretofore been compelled to suffer from the direct rays of the sun.

Some of our best duck locations have been on cut down timber tracts, where the second growth of the woods had reached a height, affording a free undercurrent of air. Lands of this kind can be bought at times for a song and it will pay anybody thinking of buying to think well before he leapeth. In the tracts devastated by lumber men and match companies we often find localities that can be bought for a fraction of what the buildings on the same would cost to erect. If they should happen to be within reaching distance of depot and post office, other inconveniences had better be forgotten in the fact that capital saved means less interest on same to charge and more profit.

The character of the soil should be as mentioned above, as sandy as possible, if the duck crop only is to be considered. On the other hand, if it is aimed to raise some feed or green stuff for home consumption, a more nutritious soil will have to be found, a soil that will take and make manure values reach further. Fish, the greatest tonic food for stock ducks, if they can be had for a price not exceeding much the value of green cut bone or beefscrap and in a quantity to be sufficient for the entire length of the breeding season, let us say, from December till August, may also form a strong drawing card towards a particular locality. The fame gained by Long Island ducks, for instance, rests on the large number of birds sent to the metropolis from that island in high-class condition. It is true, they had the best of the deal from the start, being next to the pioneer in this line and being so closely situated to New York City, a natural call from there came to them. But—and here is the point to be impressed—if Long Island did not have such a freely absorbing sandy soil, that unfits it in certain sections for any other pursuit, and if fresh fish could not be had so cheaply along the shores of its great bays, as well as the fresh water greens, that can be had for the harvesting from the bottom of all creeks and shallow waterways, we doubt if duck culture would have been able to get such a strong foothold there. Cheap ice, plenty of fish, originally cheap lands unfit for almost any other pursuit, nearness to market, the best one in the western hemisphere, and a perseverance inherited from their Dutch ancestors, slow to adopt anything new, but persisting in holding on to the old and tried, has made in Long Island out of a formerly common farming population a regular market duck aristocracy.

Large convenient houses, often better be termed mansions, heated and lighted by their own gas or electric plants, containing all modern conveniences; their owners living on the fat of the land, sending their sons and daughters to colleges, not a few of them actively engaged in the policy shaping of local banks, such are the fruits of sticking to market ducks and of improving with seasons. Their plants, often in the beginning managed on leased lands, are today ideal and ample in all proportions and kept in the best kind of repairs and paint. They represent to their owners a steady income, hardly ever influenced by outside price-cutting of the article furnished or by the values of grain. The total income from year to year remains about the same.

As all ducks marketed are shipped dressed, and during a season where the heat would quickly deteriorate the article, ice in large quantities must be harvested by every duck farmer. In studying out a location, bear in mind, that a pond or sluggish water, free from impurities, should be near, that the harvesting of this necessary adjunct is not made unnecessarily difficult. In summing up all points embracing location would say, that personal ties on the home farm should not make us forget that a sandy sloping soil, plenty of fresh running water for stock ducks, cheapness of land generally, nearness to market, and good roads to as close as possible post office and shipping station, are some of the main factors in determining success or failure. Minor points are competing gristmills, labor, amount available and value of same, available future pickers, adjoining truckers, who may dispose at times of large tracts of picked-over vegetables at nominal figures, and the general character of the neighborhood and the population. Do not crowd a duckplant into a thickly settled community, for trouble is sure to come, stay away from well frequented roads, avoid neighborhoods where "Mine and Thine" are often misunderstood, in short, try and be as far as possible alone with your work and your ducks and yet close enough to the rest of mankind that the common communications as from man to man can be had without hardships or difficulty.

(To be continued.)

N. V. Witbeck Replies to Judge W. C. Denny's Letter.

Ballston Lake, N. Y.,
Nov. 25, 1907.

To the American Fancier:

In answer to Judge Denny's objections in the November issue of The American Fancier in reference to my report on Buff Plymouth Rocks at New York State Fair published in October 1st issue of The American Fancier, will say this Buff Rock cock was pronounced the ideal color by four of the best buff breeders in the country, and Judge Graves placed him first at Schenectady Show in a large class, competing against the same birds which Mr. Denny put the blue on at Syracuse. Had Judge Denny applied to the Standard he couldn't cut this bird severe enough to have left him out, for the cock bird he placed second was in very bad condition, and as one breeder said, three colors on surface and a disqualified comb, and was two weeks later at Poughkeepsie disqualified by Judge Drevenstedt. Judges do not judge according to the Standard, for the birds that have won at the other large shows, were never taken out of the coop at Boston last winter, and when Judge A. C. Hawkins' attention was called to it, he said they were Red, not Buff. But they had won under Denny and others, as the ideal color. If our judges would judge the birds and not the men who own them, the color question could soon be settled, but as it is we are having a different color of buff for every show. The Standard is plain; soft golden buff, even throughout. Mr. Geo. Fox has complained rightfully in his letter in the Buff Rock Quarterly of November. Judges pay no attention to the Standard in judging Buff Rocks. After 14 years of exclusive breeding the Buff Rocks, from 300 to 500 each year, I know the Standard is the guide to go by, for the judging of today, if applied to the breeding Buff P. Rocks would be a thing of the past in five years.

Meeting of the American Polish Club.

The seventh annual meeting of the American Polish Club will be held at Meriden, Conn., on Thursday, January 2nd, at 2 P. M., 1908, and a good attendance of members is desired as the election of officers takes place at this time. Arrange now to attend the meeting and exhibit your birds, and see the greatest display of Polish ever brought together at any show in America.

We already have $149.00 in cash and cups as specials on the different varieties of Polish, with more to follow, and the beauty of it is that nearly all of it is cash.

Don't forget the Meriden Show, December 31 to January 3. Come and bring your Polish and win your share of the cash and cups. If not a member of the club send $1.00 at once and join the army of successful Polish breeders. Many new members are now coming in, so why not start on the road to success along with the others and get your name in the new club catalogue for 1908. Now is the time, don't delay, or you may get left.

For list of specials, club catalogue or membership blanks, address M. V. Caldwell, Secretary and Treasurer, Route No. 5, Lisbon, Ohio.

Judging as Done To-day

By George Fox
Eastern Vice-President of the American Buff Plymouth Rock Club

As a breeder of thoroughbred poultry, I wish to take up and discuss the manner and unreliableness of awarding premiums as practiced by the judges at some of the leading shows this past season. We have an "American Standard of Perfection" printed and published by the A. P. A. as late as 1905, and which remains our standard until the year 1910, no matter who may object.

Careful and successful breeders *must* have as their guide and model this universally recognized and adopted Standard, there is nothing else. Now, if they breed to this Standard, their birds must be judged by its requirements, otherwise all of their skill and efforts are thrown away, and an award at a show amounts to nothing. It has no comparative value at all. For example: A bird winning first honors under one Judge at a New York show, though in equally as good condition, may not even be placed or considered by another Judge at a Chicago show. One Judge lays the greatest stress on *size*, ignoring color, symmetry, type and sectional qualities. Another Judge considers nothing but color and markings, ignoring type and size and other qualities. And still another Judge is all for size and type, and an idea of color that changes with his every whim.

Of course none of us can control nature to such an extent as to reproduce in every detail in an animate object just what our model calls for. But we can, taking section by section, as given in the Standard scale of points for each breed, produce birds that will score up a total of from 90 to 97 points out of the 100 points of perfection. Just here is a point I wish to take up and discuss as forcibly as I can.

The Standard says, in applying the comparison system of judging: "Valuation" in awarding prizes under this system, every section of each *specimen must* be given full consideration, *valuing same,* both in *shape* and *color* as provided by the Standard "Scale of Points" for the breed, no more, no less. No Judge in applying the Standard by this system shall give *any one* section undue prominence in arriving at his decision. Now, if the Standard requirements were carried out conscientiously by the Judges, eliminating all personal prejudices and fancies, whether good or bad, both comparison judging and score card judging would give the same results and be equally satisfactory, though I would certainly be in favor of comparison judging to get accurate and quick decisions. But, unfortunately, today many of our present Judges pay no attention to our Standard requirements, they have their own personal standards, prejudices and fancies, each Judge different ones, and it is rarely they ever see twice alike; they are liable to change continually. Score card judging would take a very long time, especially at our large shows, the Judges would get tired out and in the end do very poor work. And besides the time consumed in awarding the prizes would have a decidedly doubtful effect on the financial success of the show. It would practically stop the publishing of the official premium marked catalogues, which would be most disastrous. The cataloguing at the large shows is usually done by some enterprising printer for what he can make out of it, and not by the management of the show. Cut out the sale of the Premium Marked Catalogues and the printers would throw up their jobs unless paid for all their work by the show management. This is such a serious condition that we are practically compelled to have our judging done by the comparison system.

This past season at some of our leading shows I was particularly struck by the entire lack of system, and especially uniform system and consistency of the Judges. One Judge considered nothing but size—over-size—he paid no attention to the rulings of the Standard of Perfection; so far as I could see, his judging was most inconsistent. In a fine class of White Rocks he placed some of the awards on hog-fat, loose feathered, high cushioned, twisted winged birds, wings that could not be folded in, when numbers of other fine white standard weight birds were passed unnoticed. And again in other classes of same variety he cut severely birds whose wings were not folded firmly into the body and who were not closely feathered. Another Judge disqualified whole classes of birds with the slightest suspicion of down (not a quilled feather) on or between the toes and out they went. One such piece of down disqualified whole pens in some instances, leaving none at all for prizes. In my opinion to disqualify is a very serious thing and it should not be done lightly. It puts the exhibitor and his stock in a very bad light and without doubt encourages faking. It certainly is a very easy way for a Judge to dispose of his classes. Another Judge in a Buff Rock class took one cockerel out of his coop five times to look for feathers on shanks. When asked what he was looking for, he replied he was not quite sure there were not some feathers he could *not* see under some of the scales on the shanks, that he had a mind to throw him out as he was not quite certain about it. Again the same Judge in a very large and strong class placed a high award on a pullet, good in color, but absolutely off in the type, head and size. When asked about the award and if that was his interpretation of Standard type (the pullet with a rose comb would have won as a Wyandotte, and a typical one at that) he replied he did not care about type, that she was Buff in color and that was his reason for giving her the award. To show the inconsistency of this same Judge, in going over the pens he was asked why one certain pen won over another certain pen. His answer was that the comb of the male bird in the lower award pen was too much like a Leghorn's (his other points were overlooked), he admitted the females were the best, but the male bird was half the pen, so he gave the first award to the pen whose male bird's comb did not look so much like a Leghorn's, and this irrespective of the other qualities and the other half of the pen. And still another Judge, "one of our very best," overlooks the Standard requirements for Buff Rocks and yet has not an established type of his own. One year he lectures and proclaims the "Light Lemon Golden Buff" as our Standard color. The next year he adopts a richer and deeper shade as the ideal. And then again, without any warning, the following season comes out with the "Red Mahogany" as the ideal and judges on these lines, and further says he has made up his mind that in breeding, under color has nothing to do with success in producing good surfaces. His latest ideal was size, type and rich mahogany Buff surface color.

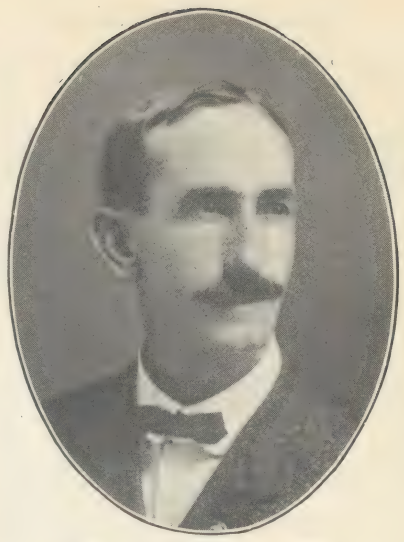
To sum up: Our whole system of judging as now practiced is wrong; it is inconsistent, very uncertain and very misleading, and we, as breeders, are the ones who suffer by it. As a Specialty Club we should, in my opinion, select several good, intelligent Judges to act in the different sections of the country, and instruct them that when judging they *must* judge absolutely by our *present* "Standard of Perfection," both in score card and comparison judging, taking proper value *only* of each section as set forth and that they must eliminate absolutely all *personal* theories and prejudices and apply *only* the Standard requirements *to the letter.*

* * *

Boothstown, Lancaster, England,
Nov. 26, 1907.

Dear Sirs:

Having taken The American Fancier in the U. S. A., now that I am over here I should like to continue to have it, knowing that your paper gives the best information.



J. LITTLE.

Hon. D. A. Nichols,
Judge at Madison Square Garden.

Mr. Geo. H. Northup,
Minorca Judge at Madison Square Garden.
Mr. Northup will report the Minorca Classes for the American Fancier.

Geo. H. Burgott, Esq.,
Leghorn Judge at Madison Square Garden.

The Philadelphia Show.

Many of the specialty clubs will give their state cups at the Philadelphia Show held this year Jan. 21 to 25 and all of them are offering club ribbons. The Association is offering many cups as specials as well as giving liberal cash prizes. The following judges have been engaged:

H. B. Schwob, Irondequoit, N. Y. —Barred Rocks.

J. H. Drevenstadt, Red Bank, N. J. —White Rocks and all Wyandottes.

George Fox, Torresdale, Pa.—Buff Rocks.

Al. Ingram, West Chester, Pa.—Brahmas, Cochins and Cochin Bantams.

J. D. Nevius, Philadelphia, Pa.—Langshans, Minorcas, Dorkings, Partridge and Sliver Pencil Rocks and Javas.

A. C. Smith, Waltham, Mass.—All Mediterraneans except Minorcas.

Louis Graham, Glenolden, Pa.—Polish. All Bantams except Cochin. All Ornamental.

John J. Ritz, Elkins Park, Pa., —Water Fowl and Turkeys.

The following are Pigeon judges: W. Dunlop Diston, Geo. F. Erbe, Thos. Scholes, Jos. Gavin, R. N. Oliphant.

Applications for Premium Lists and Entry Blanks should be addressed to Leslie Jefferis, Secy., 248 Mint Arcade Bldg., Phila.

* * *

The annual meeting of the F. D. & Q. Club was held at the White Plains Poultry Show, Nov. 29th, 1907, and the following named officers were elected for the ensuing year: George Murman, Brooklyn, N. Y., President; J. H. Drevenstedt, Red Bank, N. J., 1st Vice-President; W. J. Stanton, New York City, N. Y., 2d Vice-President; Jonas Hayner, Livingston, Mass., 3d Vice-President; H. W. Billard, Brooklyn Hills, L. I., Sergt.-at-Arms. Board of Directors—Jas. B. N. Fitch, Mt. Vernon, N. Y.; Geo. W. Weed, East Lee, Mass.; J. Hart Welch, Douglasston, L. I.; F. W. Corey, Ossining, N. Y.; F. H. Davey, Greystone, Yonkers, N. Y. Law Committee—J. H. Drevenstedt, Geo. W. Weed, W. J. Stanton. Mr. Jas. B. N. Fitch was appointed as a committee of one to make arrangements for the annual dinner given by the club during the New York Show. Messrs. Geo. Young, W. Bailey, Frank Gaylor, B. F. Briggs and Geo. A. Middleton were elected members.—H. W. BILLARD, Secy. and Treas.

* * *

Notice to Show Secretaries.

The American Rose Comb Brown Leghorn Club offers diplomas at all shows in United States and Canada for best exhibit, also Silver Cup at New York, Indianapolis, Chicago, Oshkosh, and Cedar Rapids for best exhibit. Membership blanks can be had by writing the Club Secretary, Fred Alger, Waukau, Wisc.

Complete list of awards of the Madison Square Garden exhibition with report will be published in our issue of Jany. 1st.

The Buff Wyandotte.

By Henry R. Ingalls

Secretary of the American Buff Wyandotte Club

THERE seems to be a great craze nowadays for something new in the poultry line. The reason for this, as I see it, is that those breeders who have been only partially successful in breeding one of the older varieties think that in a new breed they see a chance to make some money, because owing to the demand for the new variety they can get good prices for almost any sort of a bird. Look at the Orpington craze; see what a lot of trash was sent out as Orpingtons, and the Columbian Wyandottes are being dealt with the same way. The papers are full of puffs for them, written by people who have them for sale, and those who are looking for another good variety to breed take them up. They are a good variety all right and deserve to succeed, but good conservative judges agree that they were placed on the market ten years too soon. In writing the above I have no desire to do any harm to the varieties mentioned, but wish to compare them with the Buff Wyandotte and the way it has been handled. If it has ever been boomed the way the above mentioned varieties have I do not know it, on the contrary, it seems to me they are in the hands of a most quiet lot of breeders, for they never write anything for the papers in regard to them, and even in the club they seem to be indifferent about the welfare and advancement of the breed. So it is evident that what progress the Buffs have made is due entirely to their good qualities.

They are not a new breed as their origin dates back more than twenty years or to 1885, when Mr. W. H. Nicholoy, of Newark, N. J., first started a series of crosses and matings to produce a buff Wyandotte. He was followed a year later by Mr. George H. Brackenbury, of Auburn, N. Y., and he by a number of others soon after, chief among whom were Clarence J. Reddig, R. G. Buffington, Charles P. Pond, J. H. Drevenstedt and J. O. Joslin. The principal crosses used by the originators were a Buff Cochin and Golden Wyandotte cross except in the case of Mr. Buffington, who used the R. I. Red. The present day strains of Buff Wyandottes are the result of the crossing of the Buff Cochin cross with the R. I. Red strain. It is certain that as a profitable utility fowl the Buff Wyandotte has all the points possessed by any breed of fowls on earth, fine layers, hardy, quick growers and always plump, a quiet disposition, and as a fancy fowl they are the fancier's delight. There is nothing that wears feathers that is more pleasing to the eye than a real good Buff Wyandotte. There is something in their makeup that causes them to be a good winter layer. In my own experience they are the best of many varieties tried, and I have before me a letter from a breeder of White Wyandottes in which he says he has bred the Whites for years, breeding for eggs alone and he has had good success, getting hens with a record of 225 eggs per year; he also breeds Buffs on the side and these for exhibition only, paying no attention to eggs at all, but even at that his Buffs have reached 182 eggs per year. He uses trap nests and his records show that the Buffs "lay more eggs on less feed during winter when eggs are high."

Buff fowls are all good winter layers; even the Buff Leghorn will beat their sisters, the Whites, and we call these "egg machines." I find my White Wyandottes are hard to keep in proper condition, they being very liable to liver troubles and looseness of the bowels and they will not stand forcing like the Buffs. White Wyandottes are prone to lay poor eggs, rough and ridgy, chalky and weak shells, and poor in size and uneven in color. I have incubated thousands of their eggs, from many different strains of stock, and they have all shown the same defects. A broiler raiser of my acquaintance says: "White Wyandotte chicks are the quickest and best growers up to a pound and a half in weight and I would use nothing else, but you can't get the eggs to hatch; there is always something the matter with the hens."

I sold a party a pen of Buffs, a fancy pen at a fancy price, one of the hens, as a pullet, won second at Herald Square and third at Madison Square Garden. After nearly two I ever knew of. For nearly two years years this man writes: "That best hen you sold me is by far the best layer she has laid continually, in season and out of season, and has never been broody. I have set most of her eggs and not one has been infertile and almost every one has hatched." Other breeds have been advertised as the best layer in the world and all of that sort of thing, and it may not be amiss to state that as a rule it is more in the care and feeding than it is in the breed, but when it comes to a fair trial under the same conditions it will be found that the Buff Wyandotte will be near the top every time as a layer of "eggs when eggs are high."

As a market fowl they have no superior. Our markets demand a plump body, bright yellow skin and legs. Where is there anything that can beat them when it comes to these very points? Let me quote another White Wyandotte breeder. He is, or always has been, unable to see anything but a White Wyandotte. For the past two years he has been breeding a few Buffs too. In a recent letter from him I find this: "I want to tell you, if I was in it for strictly market poultry I would raise nothing but Buff Wyandottes. They made the finest looking poultry I ever saw." Another breeder of Buffs took some young Cockerels to his market man. They were nicely dressed. The market man had a lot of "fancy" birds of Barred Rocks, Reds and White Wyandottes hung up in his show window. He looked at these Buff Cockerels, then looked at his "fancy" Rocks, etc. in the window and said: "I guess I will take those things down and hang these up in the window; we cannot get half enough of such poultry." They are of just such appearance and quality from the "squab broiler" stage up to the "good fat old hen"—always sell on sight and never disappoint their buyers. They grow up quickly and are easily fattened. It would be a good thing for the market poultry business if more Buff Wyandottes found their way to market.

It is as a fancy fowl that the Buff Wyandotte shines. They are a beautiful bird when bred up to the standard by breeders who know what the proper color and shape is. The Wyandotte "travels on its shape." We all know and admire the distinctive Wyandotte form, and when we have this covered with a coat of the real rich golden buff feathers we have a bird of rare beauty; a bird that will give anyone a bad case of hen fever. I get discouraged sometimes trying to produce the proper thing and think I will give it up, but just as soon as I see a real crack-a-jack my fever goes right back to its old point, as bad as ever. I suppose all fanciers, real fanciers that is, have had the same feelings and experience, we never get as good as we want. Too many of our birds are coarse in head points and we should all strive to remedy this; it is a very hard task, I will admit. Suppose we succeed in producing a cockerel of exactly the right shade of color, perfect shape and solid buff, but he has a poor comb. What shall we do with him? Shall we kill and eat him or sell him for a dollar? The safe guess is that we will breed him, that is the proper thing to do, and in the face of such difficulties we have done well to get as good heads and combs as we have. When we get the correct shape and color we cannot stop for a minor defect. Uneven color is too common and a strictly even color from end to end is hard to get. If we get it on a bird I am sure we should breed that bird even if it is not exactly the proper shade of color. In breeding Buffs we cannot be too strict, for if we are we will not have any birds to breed from. We have to allow a little both as to shape and color. It is well to breed those specimens which are well balanced in all sections even if they have very slight defects in several sections. The model breeding bird is one that is good all around with slight defects in several points rather than one that is perfect, or nearly so, in all sections but one, and that one all wrong.

How to produce the proper color is a question often asked and answered in different ways. I think the best way is to breed together birds of the proper color and they will produce it for they are it themselves. Keep just as near to it as possible. It is safe to say, never mate extremes in color, it is unsatisfactory all around and seldom produces any good birds. Keep the white out even if you get a little dark. White tends to destroy while in many cases black intensifies buff color and makes it stronger. Get wings and tails as clean as possible, but look to evenness of color first.

In general the Buff Wyandotte fails in shape owing to the craze for clean tails and wings and color in general. Just look! What have you if you have a bird of grand color and no Wyandotte shape at all; you have a Buff that is not a Wyandotte instead of a Buff Wyandotte. To get the proper shape we must not go much over the standard weight. The very large birds are generally coarse, and long and straight where they should be fine and short and curved. I have had experience with the big ones. Several times I have purchased extremely large males thinking to increase the size of my birds and in every case these large males have been worse than useless. They all seemed to lack vigor; they did not fertilize the eggs, the chicks from them were weak and as a rule never showed any of the Wyandotte qualities at all. Many say the Buffs run a little under size, and as a rule they do and the reason for it is as I have stated above, the large birds lack in shape and do not breed shape. Most breeders are striving for vigor, activeness and shape and the medium-sized birds are nearly always best in these points. Breeders should make it a point to banish all birds that show white in ear lobes. This deficit is persistent and unsightly and should be overcome, the sooner the better.

The Buff Wyandotte as well as other buff breeds have been injured in popularity by the great difference of opinion among judges and breeders as to what was the correct shade of color. I have heard many say: "I like Buffs but will never breed them until there is some guide to go by to show us the proper color." I am having a very extensive correspondence with breeders of Buff Wyandottes from all over the United States and I find they are waking up on the color question and they are getting together on it. The West has favored the dark birds and the East the light, but at present the tendency in the West is toward a lighter shade and here in the East this year some of our Buff breeders have been very much put out because their lemon buff birds were turned down by the judges. I hardly see how there can be any great difference of opinion as to what the standard means when it says "a rich golden buff," there is nothing at all hard to understand about that. It means just what it says, "a rich golden buff" not red or any shade of red or a lemon or straw color. Breeders should breed the proper color and show it and make the judge get down to business and apply the standard and not a fad of his own.

Which shall be favored in placing awards, shape or color? That seems like a simple question, but really it is a hard one to answer. We all want god color, and birds with the right color and clean wings and tails are in great demand and bring good prices even if they are defective in shape. Without the proper shape we have no Wyandotte, so I am inclined to think it would be a good thing if the judges favored shape in placing awards. It is much easier to tell how to do it than to do it, so let us give the judges crdeit for being as careful and honest as they are.

To those who are going into the poultry business and are looking for a first-class variety of fowls, I ask that they consider the Buff Wyandotte. Do not think you can take up some new and much boomed breed and succeed with it; you will not. It takes too much experience to get a new variety into shape. Try Buff Wyandottes for either fancy or utility. There is nothing better in any way. If you are successful in producing good birds there will be a ready sale for all you can raise and at your own prices.

To those who are breeding them and are interested in their welfare, I will invite them to join our Buff Wyandotte Club and help us bring the breed to the front. It seems to me as if breeders of Buff Wyandottes are not so energetic and wide-awake as the breeders of other varieties. Every popular breed has a strong club behind it, and I am sure there is no reason why the Buff Wyandottes Club can not be as large and successful as the rest.

We are interested in the breed and want to see it among the leaders and that is why we have written this article and if it calls the attention of the public to the breed, I shall be glad I made this weak effort in their behalf.

The Sunswick Poultry Farm.

American Dominiques

(Written Expressly for the American Fancier)

By Dr. W. H. Harwood

THE American Dominique, the oldest American breed of fowl in existence, was doubtless in its origin a combination of the several varieties of chickens brought to America by the early English colonists of New England, and Dutch settlers of New York. At a little later date it would seem that the blood of some variety from the West Indies entered into the combination and gave the breed the name of Dominique. We are not to suppose that there were poultry fanciers among the colonists of those days who kept any breed pure; rather did they exchange eggs and chickens and mix all the varieties within their reach, just as do many farmers in our day. And out of all this crossing of English and Dutch and West Indian breeds we believe the American Dominique was evolved. This is the true old American breed, descended from the fowls kept by the early colonists of New England and New York.

The Dominique had its origin and development in the needs and requirements of our pioneer ancestry; we do not wonder then at finding it the best, or one of the best, all-purpose breeds. In the early days of our country the farmers had no nice, warm poultry houses. The hens roosted nights in a cold, open shed, and ran days on the big barn floor. A hundred years of such treatment proved a fine demonstration of the doctrine of "the survival of the fittest," and it is doubtless due to this treatment that the Dominiques are still the most hardy and healthy of fowls. Then, in those good old days, the selection and care of the poultry was mostly left to the women. Our grandmothers had a keen eye for handsome and well-shaped birds, as well as for vigor and profits. The handsomest and most shapely cockerels were selected to "winter," and the hens that did not prove excellent layers lost their heads. All of this tended to the development of a breed noted for beauty, sprightliness and useful qualities.

Time was when the Dominiques were extensively bred—in fact, were the "common fowls" of New England, New York and some parts of New Jersey and Pennsylvania. But with the coming of the Asiatics, and breeds from various parts of Europe, and the formation by crosses, intentional and accidental, of a score of new varieties, most people were carried away with the "something new" fever; and the old true and tried, (and not found wanting) Dominique was neglected. Had it not been for a few people of uncommon good sense, we would have today only a memory of this grand old breed; but thanks to these few, who clung to the breed and kept it pure, we still have it in its purity; and a hundred intelligent breeders are now working to push it to the front again, and that with good success. An American Dominique Club has been formed, and we confidently expect the old breed will ere long be placed where it belongs, both by age and merit, at the head of the American varieties of fowl.

In closing this brief article, let me add that in selecting your Dominique stock, avoid above everything else any possible contamination with Barred Rock blood. I would much rather use a cock with plumage half white, and feathers tipped with red and gold (in fact, the bird of our great grandmothers often had these markings), than one with even one-eighth part Rock blood. It ruins the active, up-and-a-coming Dominique style, and gives us coarse, beefy birds that are an abomination to every genuine Dominique fancier. True, a Barred Rock was in the beginning half Dominique, but it was also half Java, the very antithesis of the Dominique. Have no bird in your yards but has come from stock certified by one of the old reliable Dominique breeders.

W. H. Harwood, M. D.

Chasm Falls, N. Y., Nov. 20, 1907.

Why I Prefer Buff Rocks

By R. B. Sando

BUFF ROCKS are, to my notion, the most versatile breed of poultry in existence today. They will readily adapt themselves to any environment, any climate, and any purpose; that is, any branch of the poultry business, such as producing eggs, broilers, roasters, capons, etc. They are suitable alike for the broad acres of the farm and the narrow confines of the city backyard. They never fail to make good use of all the range provided for them; they are "rustlers" in every sense of the word, but they are not pernicious mischief makers that some breeds are. They are of a quiet disposition, and not inclined to get excited over trifles, making good companions and pleasurable pets for children; in addition, this trait endears them to the heart of many a village or city poultry keeper whose Leghorns, Minorcas, or other "nervous" breed would soon have the profit all scared out of them. They stand confinement well, and some of the most profitable Buff Rocks I know of have nothing but a back yard for a "range."

Buff Rocks have yellow skin and legs and yellow plumage which perfectly matches the former; therefore, there are no unsightly pin-feathers on the dressed carcass. That is a point which one cannot afford to overlook if he is hunting a good market breed! For what presents a more unappetizing appearance than a carcass all speckled with black or variously colored pin-feathers! And, I might add in this connection, don't let anybody persuade you that white pin-feathers will match a yellow skin. Fowls with white feathers are somewhat better than those with black feathers for market purposes, but not much. No "red" breed of chickens can take the place of the Buff Rock in this respect, for black feathers in wings and tails are requisites of all the present red breeds of chickens. Besides this, the Reds have not the size of the Plymouth Rock and do not breed nearly so true to feather.

A Prize-Winning Buff Rock Owned by R. B. Sando.

Then there is their color, which is one of their most important points of superiority. What fowl has a more handsome plumage than the one clothed in rich, golden buff? And then, above even this, what color is more practical for chicken plumage than buff? White fowls are an abomination on most farms and in nearly every city. They present a dirty, blotched-up appearance, besides making elegant marks for hawks and other varmints, as well as midnight marauders. Then, too, the sun makes the plumage of white fowls turn "brassy," and yellow corn has the same effect. But no breeder of buff fowls ever lost any sleep on this score.

The Buff Rock is the most popular buff breed in existence today, and is the largest, with the exception of the Buff Orpington, but the difference here is very slight. However, not much hesitancy need be indulged in when comparing these two breeds. The Orpingtons were originated in England and make excellent fowl for that country, but in America they are just as poor as they are good in that country. Yellow-skinned and yellow-legged fowls are first choice in every market in the U. S., and the Orpingtons have very white skin and legs. People prefer yellow-skinned carcasses to white ones just as much as they prefer yellow butter to white butter. Certain it is that the rich-looking Buff Rock carcass will sell much more readily any old time than will the carcass that has dressed out with an unhealthy-looking white or dirty-blue skin. Besides this, there is something about the white legs of a live fowl that seems out of place, almost suggesting a poor circulation of live blood in that part of the system.

The Buff Rocks are good layers, as well as good market fowls. Flocks that have been carefully bred often rival the smaller egg-producing breeds in this respect. The eggs are of good size, nice brown color, and present a most attractive and uniform appearance. The hens make good mothers, but are not particularly obstinate in their desire to sit and one does not have to waste weeks' of time and worry trying to "break them up." The young stock grows fast; they arrive at the broiler size in eight to twelve weeks, or as soon as any breed, and then if one wants to let them grow for roasters or capons he is certain of having an extra large fowl of high quality in a comparatively short time. The pullets commence laying early and March and April hatched pullets usually commence laying in the late fall and keep it up all winter long if cared for right.

I think I've said enough to show that I have considerable reason for preferring Buff Rocks. And I am only one among thousands with a similar preference. I never yet heard of the man who got good Buff Rocks and failed to like them if he cared for them in the right way. And nobody can make a success with any breed unless he does that. Beginner, or older breeder, if you are undecided as to the merits of the Buff Rock, take my word for it and give them a trial. Don't waste time and money trying to save money by buying inferior stock; you can't make a success with any breed of chickens on earth by pursuing such a course. But get stock that are fair representatives of the breed they represent, give them "half a chance," and you will never condemn the Buff Rock.

Dominique Hens (L. M. Jones' Strain) in Dr. W. H. Harwood's Yards.

Millersville, Pa.,
Dec. 5th, 1907.

Leonard W. Lott & Co.,
Dear Sirs:

The ad. has sold nearly all the Reds already. Made one shipment to London Canada. Will send a new one for about January 15th issue.

I am well pleased with results obtained through the American Fancier.

Yours truly,
LEWIS O. MAYER.

* * *

Lakewood, New Jersey,
Dec. 6th, 1907.

Leonard W. Lott & Co.,
Dear Sirs:

Will you kindly stop my ad. in the Fancier for a while at least as I have sold all the pigeons.

Yours sincerely,
CARL WENTZIEN.

* * *

The Richmond Hill list of awards gave F. H. Wells first on pen Barred Rocks instead of W. H. Hearsfield, who won the first award. Wells was fourth.

* * *

Columbia County Poultry, Pigeon and Pet Stock Association will hold their show at Hudson, New York, January 14th to 17th. Geo. W. Cookingham, Secy., Philmont, N. Y.

* * *

Ohio State Branch Show at Columbus, Feby. 10th to 15th. Cash and other Specials amounting to $500 or more. H. P. Schwab, and Thos. F. Riggs, Judges. Chas. E. Cram, Secy., Carey, Ohio.

The illustration on the title page of this issue represents four aristocrats of the Columbian Wyandotte family owned by the Sunny Brook Farm, West Orange, N. J., of which Mr. Chas. D. Cleveland is proprietor. 1st pen of Columbian Wyandottes at Jamestown. In this pen there is a pullet (on window ledge) which took five ribbons at Trenton. Pen was pronounced by August D. Arnold, Judge Parish, Judge Denny and others to be the finest shape ever shown. Two color specials and shape specials went with the first ribbon on this pen at Jamestown. This pen is on view at the Garden this week. Mr. Cleveland states the condition of these birds could not be maintained because the pullets have been laying since Nov. 1st. Another pullet in the pen (standing back, on the right hand side of illustration) won second at Trenton and is almost as good in shape as the first Trenton pullet. From this pen the Sunny Brook Farm sold at Jamestown to August D. Arnold three settings of eggs at $25 a setting. In addition to showing exhibition pen, the Sunnybrook Farm have an entry in Columbian Wyandotte alley of 10 birds, only one of which was on exhibition at Jamestown.

* * *

At Madison Square Garden there will be 2282 in the large poultry classes, 465 bantams, 263 exhibition yards, 92 trukeys and geese on parade. The quality we will tell you about in the January 1st issue.

* * *

The article by the Rev. C. E. Peterson, on page 3 of this issue, is both interesting, practical and instructive.

The present circulation of the American Fancier is reaching out into new fields, appealing to the beginner as well as the older fancier.

We shall endeavor in the present series of articles by the Rev. Peterson to present numerous practical ideas which we trust will be of value.

* * *

Another instructive article in this issue is from the pen of Dr. W. H. Harwood, a most enthusiastic fancier of the American Dominique.

His ideas should carry considerable weight as the doctor has bred this variety for years and has made a most careful study of their peculiarities.

* * *

Although the Ducks Were Not at Jamestown, They Were Credited With Winning.

F. D. Baerman, of Dunellen, N. J., reports that he has been credited in the list of Jamestown awards with winning certain prizes on Rouen Ducks, whereas he had no ducks at the exhibition. He made an entry, but as he could get no acknowledgment or replies to the letters he wrote and as he did not receive any shipping tags, he was under the impression that his letters had gone astray, and stopped payment on the check that he had sent to cover the fees. And he also wrote the superintendent that on account of the uncertainty about the matter, he would not send his birds but would withdraw his entry.

Oftentimes we hear of an exhibitor complaining that the list of awards does not contain his winnings; but Mr. Baerman has called attention to the matter on account of receiving credit which he is not entitled to.

There was no catalogue published and the representatives of the poultry press copied the list of awards from the official book, which is responsible for the mistakes appearing in the different published list of awards. Judge W. C. Denny reported the Jamestown exhibition for us; also furnished us with the awards.

* * *

Many letters have been sent us congratulating Judge W. C. Denny's reports, as published in The American Fancier, of the different poultry exhibitions, and our contemporary, Poultry Success, must have formed a high opinion of the one on the New York State Fair, because they published it in their November issue, but no credit was given The American Fancier. Under Clubs and Associations appeared the following: "Judge Wm. C. Denny's comments on the different classes follows:" The report is a word for word duplicate of the one published by us with the exception that "Rich Golden" is printed in capitals instead of italics, and the brackets contain the following: "Capitals are Mine." In the article published by us we have in the brackets: "Italics are Mine."

Many of the articles written exclusively for The American Fancier have been reprinted in publications of this and foreign countries, and the courtesy of the press has not been overlooked in giving credit.

The November issue of Poultry Success arrived at our office on the 16th and the copied report appeared on page 68. The heading on this page says: "The latest news and announcements." But the New York State Fair of Sept. 9th to 14th is not very late news for a November issue.

Mr. Wm. C. Denny has written exclusively for The American Fancier and did not furnish Poultry Success or any other paper with a report of the New York State Fair or any fair or show that he has attended this season.

* * *

There are hundred, yes thousands, of men and women today who are debating the question whether the poultry industry pays. We receive many letters regarding this question from all parts of the country, and we are perplexed to know just how to answer this question, although there are thousands of poultry plants that pay and pay well, there are a great many that don't. Whether the success or failure is due to the plant or the owner is the question and we are inclined to believe it is the owner.

We have watched, with great interest, the beginning, and in some instances, the ending of many plants, and it is our opinion from personal observations that many of the failures are due to lack of business ability, and a venture in any other line of business would have ended in equal disaster.

* * *

By the time this issue is being read Madison Square Garden will be filled with poultry.

It is the ambition of every owner of thorough-bred stock to capture a premium at this exhibition, no matter if only the "yellow," it is shown with pride.

There is no doubt the poultry exhibitions are the moving factors that incite fanciers to greater effort to produce the best.

Without these exhibitions the poultry business would soon deteriorate into the purest commercialism; therefore it is most important that all exhibitions should be loyally supported.

* * *

The editor's office is always an interesting place and the editorial office of the American Fancier is no exception. Our visitors, which are numerous, consist of all kinds and conditions of men: the beginner, the would-be fancier, the dyed-in-the-wool fancier and last, but not least, the know-italls. From this latter class advice is always freely given.

We are told who we should employ to write on certain subjects and that Mr. H. V. Crawford, who has made Madison Square Garden the Crystal Palace of America, does not select the men best qualified to place the awards, and we should publish their personal controversies, which doesn't interest the public but brings before them a person craving for publicity but not the price to obtain advertising space.

We should add other departments to the American Fancier, as poultry and pigeon literature doesn't interest them.

We thank all for their suggestions, which were only given in a most friendly spirit. But they should remember that the writers in the American Fancier know their subjects and are well qualified to express their knowledge intelligently. Mr. Crawford can successfullv manage the Madison Square Garden exhibition, and last, the publishers of the American Fancier believe themselves to be in a position to judge best what their readers want, as the greatly increased circulation under the present management would tend to show.

* * *

At the coming Scranton Show, to be held Dec. 31st to Jan. 4th, arrangements have been made whereby Secretary A. W. Close will make classes for Buckeyes and the same premiums will be given as the others receive.

The National Red Feather Club will offer ten specials to club members, also one year's membership to the non-member making the best display.

In entering Buckeyes notify Mr. Close what you desire to show and he will give them proper numbers and classification.

* * *

In the December 1st issue of The American Fancier it was stated the Gidney Farm was going to be discontinued. This, we are pleased to say, doesn't apply to the Poultry Department. Mr. Frank Gaylor informs us that he will continue to breed and exhibit as usual.

The Orpington alley can ill-afford to lose the Gidney and Willowbrook Farms both in one season.

Although not entering as many as heretofore, the Gedney Farm will be represented at Madison Square Garden.

* * *

In speaking of Orpingtons at Madison Square Garden reminds us of another exhibitor who has for the past few years held a strong hand, the Sunswick Poultry Farm, of which Mr. George J. May is manager. We understand the breeding season of 1907 has been a most successful one, and judging by quality of the ancestors of these babies they will cause trouble when on parade Tuesday, December 17th.

* * *

Mr. Robert Seaman, well known in poultry circles, especially in Rhode Island Red Alley, has had a successful season both in the breeding yards and the show room and undoubtedly will bring a strong team to New York.

Rhode Island Reds certainly have a great following—in most all the exhibitions they have been the attraction. Both Richmond Hill, L. I., and Paterson, N. J., brought out one or two real "hummers" which will be seen seeking recognition in New York City the week before Christmas.

* * *

The Holiday edition of The Breeders' Gazette, published by the Saunders Pub. Co., of Chicago, Ill., is a most meritorious example of modern fanciers literature. It is safe to say a decade ago such work of art would have been well nigh impossible. The most striking feature of this issue, which comprises ninety pages fully illustrated, is the colored supplement of a Hereford Bull.

The Washington Show.

The annual poultry and pigeon show of the Columbia Poultry and Pigeon Association, of Washington, D. C., will be held during the week of January 6th. Premium lists will be ready for delivery about December 1st. Entries close December 24th. Washington is a good town for a poultry and pigeon display. The poultry and pigeon fanciers of the country are invited to make their entries, and come and visit the national capital. The latch string is always out. There is a world of good fanciers in and about Washington, and everyone can feel certain of a pleasant time, fair treatment and prompt payment of awards. Address Calvin Hicks, Secretary, Rockeville, Md.

* * *

The list of awards for Jamestown Exhibition was copied from the official book and as this contained mistakes, the different poultry papers published in the S. C. White Orpingtons first prize in the Pullet class as being won by two parties—Ernest Kellerstrass and Frank S. Bullington. The winner was Ernest Kellerstrass.

* * *

Philmont, New York. The Columbia County Poultry, Pigeon and Pet Stock Association will hold their annual show in Hudson—Jan. 14th to 17th. Many liberal premiums and a good number of specials will be offered. The secretary is exerting every possible effort to bring out a large entry, and indications are that this will be a quality show. Geo. W. Weed and Geo. H. Northrup will place the awards. Hudson is centrally located for a number of state fanciers, and we trust that they will turn out in good number and help support this show. Write for premium list to Geo. W. Cookingham, Secy., Philmont, New York.

* * *

The article appearing on another page of this issue by Henry R. Ingalls, secretary of the American Buff Wyandotte Club, is one that contains information which will interest all breeders.

* * *

Old Johnstown brought together at their poultry exhibition, Dec. 3 to 6, a lot of high-quality birds. Johnstown always has in the past drawn an entry of quality, and it is to be regretted that the attendance this year was poor. Many of the citizens of Johnstown and Gloversville do not give this show the support that they should. However, we trust that next year they will give a much better support, and if this will be done Johnstown will give a great show. Barred Rocks had a large entry and showed good quality. Also the S. C. I. Reds. Columbian Wyandottes a smaller entry, but some good birds. A number of White Leghorns and Single and Rose Comb Browns with good quality. Quality shown in Game and Ornamental Bantams will be hard to beat even at New York or Boston. Secretary B. W. Mosher worked hard for the show, and is to be congratulated on the quality of the birds exhibited.

* * *

Elmira, N. Y. A lively time is expected during the poultry show, week of Jan. 6 to 11. The exhibition is being conducted under new management, and everything possible is being done to have a quality show equal to the best. It is a central location, with good shipping facilities which should bring out a large entry. Geo. G. Burgott, Judge; E. W. Philo, Secy., Elmira, N. Y.

* * *

Messrs. Fincke and Thornton have disposed of their plant, known as the Short Hills Poultry Farm, to Mr. Walter Jansen, who will carry on the business under the old name.

In a letter to the American Fancier from Messrs. Fincke and Thornton we gleam the following information:

The game Bantams will be bred at Vineland, N. J., where Mr. Thornton has purchased a place.

We are glad to note they will continue breeding and exhibiting bantams, as the fancy can ill afford to lose two such strong supporters of our shows.

January 1st issue will contain Report and Awards at Madison Square Garden.

LOPEZ GRIT

Write J. M. HEAGY, Rockville, Md.

American Buff Wyandotte Club.

Our club is offering special inducements for our members to show their birds at the annual meeting at Boston. We want to get out the best class of birds ever seen. Let every member who possibly can send birds do so. A very large and fine class of Buff Wyandottes at Boston will be a great advertisement for the breed. The club expects every member to do his duty.

The specials include the $100 Challenge Cup and $30 given by the Boston Association, a fine silver cup and a considerable amount of cash by the club, and a $20 cash breeders' prize, offered by Mr. C. S. Mattison, the president of the club, for the best cock, hen, cockerel and pullet bred by the exhibitor. This latter is quite an inducement for the smaller breeder who knows how to breed good birds. The only string to this prize is that the parents of the birds must have been owned by the exhibitor at the time of mating and the winner will be required to make affidavit to the fact.

We want to encourage the breeders and this is the first step taken by the club in that direction. With the help of the members we will be able to carry out this idea on a larger scale in the future. We ask the help of every lover of the grand Buff Wyandotte, and take this opportunity to appeal to all breeders to join our club and help us build up the popularity of the breed.

Many of our members have not yet paid their dues, and to those we wish to say, please send in your dues so we can have them all in by Jan. 1. Our catalog is about ready to mail, and we have it to pay for, and we believe members will find it worth the amount of the dues. Those who do not pay in their dues by the above date will be taken off the membership list of the club. We do not want to lose any of our members and we are sure all will find it to their interest to be known as a member of the American Buff Wyandotte Club.

Those not members should join at once and take advantage of a premium the club is offering. After Dec. 15 every third new member will get a setting of Buff Wyandotte eggs free. This is on the level. Some of these eggs would cost $5 if purchased of the breeder who offers them. Send in for application blanks at once. Address, Henry R. Ingalls, Secy., Greenville, N. Y.

BONE CUTTERS
Every poultry raiser needs a green bone cutter. Cut green bone is a cheap feed extremely rich in egg-forming materials. Prepare it fresh every day with a
Standard Green Bone Cutter
the improved, positive automatic feeding cutter. Made in sizes to suit the needs of poultry men, large or small. Easy to use, and easy to buy. Write today for free catalog and trial plan.

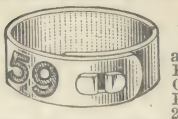
Get Acquainted

December is a very good month to begin the "campaign year," that is, the time when the poultryman takes an account of stock, makes an accounting of income and expenses, and most important of all, maps out his plan of campaign for his poultry operations for the coming year. He can look back over the hatching and growing season just passed, and then ahead over the coming housing time, and the coming breeding season. The mistakes of the year just closed are fresh in his mind, and the needs of the coming season are so close upon him that he sees vividly the need of quick action to avoid making over again the mistakes of the past season. All in all, it is a very good time to draw the line between the past season and the coming season; to consider the operations of one year closed and those of another and a new year just beginning.



And in this connection, the two words forming the subject of this sketch, GET ACQUAINTED, constitute an extremely pertinent suggestion to the poultryman as he starts the new campaign year. That suggestion means a variety of things. To get acquainted with your yards, your stock, your equipment, your books, the poultry magazines, new methods in poultry-keeping, current prices of grain and feed, and a whole lot of other things. But what the writer has specifically in mind in this article is the getting acquainted with each and every specimen of poultry in your yards. And getting acquainted is more than merely knowing the number of hens you have. It is knowing each hen sufficiently well to be able to think of her apart from the others when you are away from your yards, and to be able to distinguish her from her sisters when you want to pick out a certain one. It means that you can take a visitor into your yards, and say, "Do you see that nice-shaped yearling hen standing on the edge of the box? Her leg band is numbered thirty-two." Many a man or woman who keep hens merely as an incident to running their place, and not for profit or pleasure, will laugh at the idea of being able to tell every hen in a flock of twenty or more apart, but hundreds of breeders who enjoy their flock well enough to make it a practice to study it and spend a certain amount of time each day, if only a few minutes, with it, will tell the man who laughs that the laugh is really on the laugher.

LIGHT BRAHMAS
A few good birds for sale
J. A. ROBERTS, Malvern, Pa.

During the Thanksgiving week, the Second Annual Poultry Exhibition was held at White Plains, N. Y. Quality was indeed very good but we regret to say that the attendance was far from what it should be. Located as White Plains is in the very hotbed of the fancy, the attendance should have been larger. We realize that the officers cannot keep advancing money for this exhibition and the result at the last will hardly warrant a continuance.

3 Great Books FREE.

We have just succeeded in completing with a book publishing house one of the greatest contracts for high-class books at EXTREMELY LOW prices yet made. We therefore are now in a position to offer, at a remarkably low figure, such masterpieces as those by the authors of the famous "Sherlock Holmes," "Uncle Tom's Cabin," "The Duchess," "Little Men," "East Lynne," "Count of Monte Cristo," etc., etc. Out of the thousands of books at our disposal when we made up the following list we selected, after careful deliberation, the twelve novels which have been found to have proved most phenomenally popular. For interest-riveting mystery, daring adventure, love and thrilling romance no twelve greater books have ever been assembled. Any TWO of these books will be sent ABSOLUTELY FREE to all who will mail only a dime, 10 cents, for a big trial subscription to what is generally acknowledged the greatest national monthly published at a popular price, the AMERICAN HOME MAGAZINE. This big, new periodical has drawn upon all the almost unlimited resources of a great publishing organization for its endless variety of startling features. Here you will find the provokingly funny color cartoons, and screamingly odd Happy Hooligan, Buster Brown, And Her Name Was Maud, and the dozen and one other marvelous creations of those master minds of mirth and fun—Opper, Dirks, Bunny, Outcault, and all the rest. Of the magazine's great editorial writers only a few of the dozens upon dozens can here be mentioned. Among these are ELLA WHEELER WILCOX, the most brilliant woman in contemporary American life; DINKELSPIEL—the inimitable—the man who has set all the world a-laughing; MAURICE MAETERLINCK, Belgium's foremost living philosopher and litterateur; CLARA MORRIS, the noted actress, who will write of life on the stage and of the busy world; PROFESSOR GARRETT P. SERVISS, who has magically transformed the mysteries of science into tales of marvelous romance, and BEATRICE FAIRFAX, the most brilliant, cleverest woman who has ever written on love, romance, and the things of the heart. These are but a FEW of the master minds who will contribute regularly to the great new monthly. For the strange, the bizarre, the unlike, the fascinating, read the brilliantly interesting new AMERICAN HOME MAGAZINE. (Read below how you can also get a THIRD book free.)

No. L2. The Crime and the Curse. (Mrs. Southworth.)
No. L17. The Old Red House Among the Mountains.
No. L28. On Her Wedding Morn. (C. Braeme.)
No. L37. The Love That Saved Him. (Mrs. Stephens.)
No. L27. The Great Hampton Bank Robbery.
No. L48. Sweet Is True Love. ("The Duchess.")
No. 34. My Mother's Rival. (Braeme.)
No. 6. Lany Gwendolin's Dream. (Braeme.)
No. 26. The Bride of an Hour. (Stephens.)
No. 16. Beauty's Marriage. (Braeme.)
No. 35. Farmer Holt's Daughter. (Garvice.)
No. 25. A Maiden All Forlorn. (Duchess.)

Order (by number) and secure FREE ANY TWO of the above excellent high-class novels, by mailing IMMEDIATELY a dime for the greatest national monthly published at a popular price—AMERICAN HOME MAGAZINE—if you remit AT ONCE you may also select an extra THIRD book FREE. Order all three books BY NUMBER and address at once.

Taylor Bros., Dept. H, Camden, N. J.

When this issue reaches its readers the Madison Square Garden Exhibition will be on. After all, the show room is the center of attraction to the real fancier. The breeding season may be interesting, the late summer and autumn, full of expectations, but the winter exhibitions are the places where all our hopes and fears are decided.

We occasionally hear of one who really has fine stock but doesn't care to show; of course it isn't because he is afraid of competition, but merely because he thinks too much of his pets to risk them to the care of the expressman and the show attendants. This seems to us to be a most ridiculous statement, but we have heard it given.

It is hardly possible that a man will spend $50 to $100 per bird just to have them to look at. The real reason he doesn't put his birds in competition is that he has made so many extravagant claims as to the superior quality of his birds that he fears to put them to the supreme test.

The question of judge is another excuse for the non-appearance of some; this generally is without foundation except they believe he made a mistake at some former exhibition and they didn't fare as well as they expected.

* * *

Seventeen hundred and twenty pigeons on exhibition at Madison Square Garden Dec. 17th to 21st. Don't forget the dates.

* * *

While we have to admit there are plenty of pigeon exhibitions, we at the same time confidently believe that with shows, like everything else, there is plenty of room at the top.

There are plenty of fanciers owning grand studs of birds but only show at one or two exhibitions. Why? Look at most of the premium lists and you can read the answer.

* * *

The Pouter Club is convalescent; it was never dead, but very low, and with the bracing air of Chicago, we hope, will rapidly show improvement.

There are a good many very enthusiastic pouter fanciers left in this country to bring out a strong class in most all colors, and they should all try and show a team this season and bring the variety again to the front ranks.

During the last few years many grand specimens have been imported, and this should show in the young birds of today. It was never lack of quality that hurt the pouter, but rather too much quality.

* * *

Mr. E. C. Duffy, the well-known pigmy pouter fancier of Washington, writes it will be impossible for him to come to New York during the show.

Mr. Duffy will be missed in pigmy alley and we hope it was not on account of the Washington Show coming so close—January 6-11, 1908. We heard he was staying home to train his birds for the annual show at Masonic Temple.

In speaking of Washington always reminds us of the fine pigeon entry this city generally brings out and this year will be no exception. A good list of specials, capable judges, a fine classification, and the best of fanciers will be found at Washington, D. C.

* * *

It has been a number of years since an exclusive pigeon show of all varieties has been held.

In 1896 Boston held an exhibition which brought together a grand display. Louisville also held an exclusive show, the last we believe, was in 1898. This year Rochester will hold the first pigeon show ever held in that city. As there are hundreds of fanciers in and around Rochester they will no doubt hold a fine exhibition.

The management is in the hands of a most capable set of fanciers, which should be the means of bringing out a good display.

* * *

During the past few years various associations have had considerable trouble running their exhibitions under American Pigeon Club rules, especially the rule which requires all entries to be properly banded and the band numbers of the firsts in various classes recorded on blanks of the A. P. C.

The taking of band numbers of these birds is generally left to the judge or judges, and is often neglected although, to our mind, is a most important factor, as it assures one who may purchase the bird thereafter of its winning and the number in competition.

We realize the extra time it requires, but it is the duty of the judge just as much as placing the awards, to see that these blanks are properly filled out.

* * *

The following specialty clubs will hold their annual meetings at Madison Square Garden: American Carrier and Barb, Dragoon, Jacobin, Eastern Fantail, Turbit, Oriental Frill and Owl clubs.

* * *

Don't think any place will do to keep pigeons. Don't think you know more than the judge. You may know as much, but hardly more. Don't cry after you are beat; take it kindly and say you will try and do better next time. Don't say your competitors' exhibit was prepared for the show while yours was not; it is ridiculous. Don't dispense with grit, you need plenty of it, especially in the show room. Don't buy cheap food—nothing is worse. Don't buy cheap stock, as they are useless, except for squab breeding.

Many pigeon fanciers give their birds an inadequate flight in the winter months and then over-feed. The result is that the hens get too fat, and either will not lay at all or else become egg-bound. Many an apparently barren hen that has been separated and got into first-class condition lay well for the rest of the season after being mated up again. Over-feeding at all times is harmful.

To keep the birds really fit for the breeding season give them just enough feed and no more.

* * *

If a hen that is out of condition through illness be mated up, the results will be even more serious. Breeding involves a great draw upon the birds' constitutions, and such hens, even if they do not quickly go light, will be quite unable to properly feed their young, and these will most likely grow up weaklings. So, once more, we would say that when mating up birds condition is most essential to success.

* * *

Those fanciers who do not believe in early breeding must have felt very pleased with themselves during the past week. In the East of England especially so. The rain, sleet, snow, and severe frost coming alternately, wrought terrible havoc amongst the early hatched birds, both chickens and young pigeons. We should think that birds which have stood the various changes in the weather which were constantly taking place last week will grow up hardy enough to stand anything.

* * *

Perhaps, after all, say the English *Stock-Keeper*, it is a case of the survival of the fittest. Most likely every one of the early hatched pigeons still living will be worth several June and July hatched birds from the breeding point of view. Constitution counts for a lot in breeding and rearing highly-bred birds.

Pigmy Poulter Club Specials.

At Boston, Jan. 14-18, 1908.

The following list of specials will be sure to please the eyes of the members of the American Pigmy Pouter Club. They comprise one of the finest lists of cups put out by any club for the annual meet, which takes place in connection with the Boston Show, January 14 to 19, 1908.

Boston Show Challenge Cup, for the best 1907 bred Pigmy Pouter shown by a member of the club. To be won three times before becoming the property of the winner.

Mr. A. E. Smith offers a Challenge Cup, value $25, for the best two 1907 bred Blue Pigmy Pouters, cock and hen. To be won three times before becoming the property of the winner.

American Pigmy Pouter Association offers a silver cup, known as the Young Bird Cup, for the best 1907 bred Pigmy Pouter.

American Pigmy Pouter Association offers a silver cup known as the Novice Cup, for the best 1907 bred Pigmy Pouter shown by an exhibitor who has never won a first at a club meet.

Mr. John Glynn offers a painting for the most typical Pigmy Pouter shown.

Mr. T. J. McIntyre offers a silver cup for the best 1907 bird shown by a novice.

Mr. E. M. Blunt offers a cup for the best A. O. C., any age.

Mr. F. Franz offers a combination knife for the best 1907 bred Silver Hen.

Mr. H. Thornton offers a cup for the best adult Blue Cock.

Mr. Alex Smith offers a cut-glass bowl for the best 1907 bred Yellow Cock.

Mr. Alex Smith offers a cut glass bowl for the best 1907 bred Yellow Hen.

Mr. A. E. Smith offers a cut glass flask for the best adult Blue Cock.

Mr. A. E. Smith, a handsome stein for the smallest Pigmy Pouter shown.

Mr. A. D. Brown offers a cup for the best A. O. C., any age or sex.

Mr. D. H. Jenkins offers a cup for the best Black.

Mr. W. C. Cady offers a cup for the best 1907 Yellow Cock.

Mr. W. J. Kinsley offers a cup for the best Yellow.

Dr. L. H. Jones offers cut glass, value $10, for the best Silver.

Dr. L. H. Jones offers cut glass, value $8, for the best 1907 bred Silver.

Dr. L. H. Jones offers cut glass, value $8, for the best Silver Cock.

Mr. F. W. Gorse offers $2.50 gold for the best adult Pigmy Pouter shown.

Mr. F. W. Gorse offers $2.50 gold for the best 1907 bred Pigmy Pouter shown.

Mr. E. R. Smith offers a cut glass bowl for the best display of 1907 Yellows.

Mr. F. Bissell offers cut glass for the best display of Whites, any age, shown by a novice.

Mr. W. Holloway offers a special for the best display of 1907 bred birds shown by a novice.

Mr. W. E. Smith offers a cut glass dish for the best 1907 Yellow shown by a novice.

Mr. Chas. E. Long offers a set of pigeon remedies for the best Blue Cock, 1907 bred. Also one for the best 1907 Silver Hen.

A Friend offers $2.50 each for the best bird in each of the Blue classes.

The Providnce Show.

For some reason the pigeon display at Providence was not very large The last few years this exhibition has brought together quite an entry, but this year was an exception. Fantails a year ago was a fine display, but this year consisted of eleven birds, with nothing startling in the cages. Andrew J. Stahl owned all by one entry. The Tumbler section was mostly one in a class with the exception of L. F. C. L. Red or Yellow Bald Heads. Cocks, 1 & 2, E. G. Place; 3 R. Toyland. Hen 1 & 2 Place. 3 Toyland, who owned a number and made an entry of one in each of the other classes. B. T. & N. S. Porter exhibited a number of Muffed Tumblers. Jacobins consisted of 1 to 4 in a class. E. G. Place, T. J. McIntyre, and Althea Farm being exhibitors. Turbits brought out a good class. Black or Dun, 8 entries—1st, Jas. Bower; 2d, T. J McIntyre; 3d, A. A. Ashley. Hens, 1st and 2d, McIntyre; 3d, Bower. Youngsters also Blue or Silver all premiums going to T. J. McIntyre. A. A. Ashley showed 4 Satinettes. Horace Rothwell exhibited Blondinettes. Dragoons brought together 54 entries in 19 classes. Quality throughout was fair. Blue or Silver Cocks—1st and 2d, E. S. Parker; 3d, O. M. Nelson. Hens, six in a class, 1st and 3d, Parker; 2d and 4th, F. H. Wright. Youngsters, 1st and 2d, Parker.

Grizzled 4 in a class, 1st and 3d, Parker; 2d, F. A. Wright; 4th, O. M. Nelson. Hens, 1st, O. M. Nelson; 2d and 3d, Parker. Youngsters, 1st and 2d, Parker. Chequers—Cock Class, 1st, F. H. Wright; 2d, E. S. Parker. Hens and Youngsters, all to Parker.

Whites, 1st in both old classes, Althea Farm; T. J. McIntyre came in for 2d. Blacks were captured by O. M. Nelson, who was all alone in his glory. Yellows, 5 in a class, with Joseph Wood running away with 1st, 2d and 3d in both classes; also 1st Red Cock. Wm. Walsh won 1st on Hen with the only entry in the class. Any Standard Color 1907 Cocks, 1st and 3d, E. S. Parker; 2d, F. H. Wright. Hens, 1st, again Parker; Nelson 2d; F. H. Wright a good 3d.

In Helmets Mr. A. E. Robst owned all but two entries, which belonged to E. J. Place, and by the way, Mr. Place succeeded in capturing the blue ribbon in the Black Cock class over the Hawthorne Avaries. A number of Ice Pigeons, Carneaux, Antwerps, Maltese Hen and various sorts and varieties of Squab breeders were on exhibition. They were mostly all owned by one exhibitor, consequently the competition was with himself. The exhibition working Homers brought together a remarkable entry of 58 in 29 classes or an average of 2 per class. George Horseman had the honor of winning the lion's share with the grand team which were capable of standing stronger competition than they had at Providence.

In Whites Joseph Wood showed four in a class. The other exhibitors in exhibition Homers were O. M. Nelson, Althea Farm, R. Lebesque and E. L. Winslow.

As I was Saying—

Snow at last in Washington, D. C. But oh! what a beautiful fall. Birds could be trained very comfortably in the loft, without aching fingers that would not snap but feel like it.

The English Pouter fever seems to have struck Washington. Several fanciers are in the market for good ones. It is about time that some fever besides Pigmy Pouters was epidemic here. There has not been a good stud of pouters in this burg for years. But the pigmies are yet the style and all the fanciers report very good luck. The members of the Columbia Poultry and Pigeon Association are on the jump these days collecting specials and making other arrangements relative to the success of their show which will be held the second week of January, 1908. This will be the second annual for this association, and they have every reason to be happy as things are running

like machinery and everything points to a really first-class exhibition.

The loss of our great and good friend Samuel W. Stinemetz, after a protracted illness, will be deeply felt by all who attend the show, as well as by fanciers all over the country. He was a life-long resident of Washington, most highly respected, both socially and commercially, always a fancier in every sense of the word, and a friend to everybody. During his busy and useful life he found time to improve and elevate many fancies. One could almost say from the horse to the mouse. He was a judge of ability of poultry and pigeons, as well as dogs, rabbits and cavies. A born athlete, of which events he was always selected as judge and when possible to secure his services, manager and director of arrangements. Men of his worth are seldom found, and we all feel the irreparable loss which his death is to each and every one of us.

Quite a flurry was caused among Washington fanciers a few days ago when, through a local dealer the Turkish minister was in the market for ten pairs each of every variety of fancy pigeons that could be had, for shipment to the sultan. Many of the leading lofts were visited and birds selected for early delivery. The minister is a keen judge and he insisted on having the best for which he was willing to pay a fair price. The writer got his finger in the pie for the required ten pairs.

We had a very pleasant visit from Judge George Ewald on his way home from Jamestown. He was healthy and happy and full of news. Our only regret is that his stay was limited.

A wind storm wrecked a large portion of the lofts of Mr. E. C. Duffy some days ago, which is giving him some inconvenience by crowding his Pigmies into a limited space.

Mr. J. F. Bardroff is nibbling at the Pigmy fancy again. Have heard he has a few pairs. Just for company, see!

PIGEON NEWS *and* THE AMERICAN FANCIER *for* ONE DOLLAR

American Fancier, New York City

ALUMINUM PIGEON BANDS
12-20 cts.; 100-$1.00; 6 samples 10 cts.
HARRY E. BLAIR, A. F. Hanover, Pa.

The poultry fanciers never took into consideration the fact that the pigeon exhibit was the most attractive part of the show to the public, and that many a quarter came in at the gate in favor of the pigeon department.

Therefore the Rochester Pigeon Club, without any hard feelings whatever against the poultrymen, decided to take a stand by themselves, and further to promote the interest of the pigeon fancy in Rochester and vicinity by giving an exclusive pigeon show, run entirely by pigeon fanciers.

The members of the club, with the aid of their friends, have contributed the sum of $400 for new Empire coops and cups, besides having a sufficient sum in their treasury to guarantee every exhibitor that he will get all that is coming to him.

Brother fanciers, it's up to you to exhibit with us and show the public that we can stand by ourselves. We have secured the services of Mr. H. D. Kirhover, of Buffalo, and Dr. John Hurdis, of Albany, for judges.

Mr. Alan F. Hill, assisted by Wm. Ehrhardt, will superintend the show, and the fanciers can rest assured that their exhibits are in the hands of competent and reliable fanciers. The premium list will be ready December 15th, and can be had by addressing Geo. J. Eckhardt, Secretary, 101 Merrimac street, Rochester, N. Y.

GEORGE J. ECKHARDT,
Secretary.

Syracuse, N. Y., Dec. 9, 1907.
American Fancier:

I am sure THE AMERICAN FANCIER has a good, wide circulation, as I am receiving inquiries from many states and sold most all my surplus stock.

Wishing THE FANCIER a greater future success I am

Very truly yours,
C. A. DAVIS.

Washington will produce two more Pigmy Novices at this winter's shows in Messrs. Robert Baker and J. L. Shipley, thereby claiming about a third of the exhibiting members of that club.

MANDIBLE.

Rochester Pigeon Club's Exclusive Pigeon Show

The Rochester Pigeon Club will hold an Exclusive Pigeon Show week of Jan. 6-11, 1908.

For the last 14 years the Pigeon Show has been a combination affair with the Poultry Show. There has been comments made from time to time that the pigeon end of it was a losing proposition to the show, although the pigeon fanciers from year to year have secured all specials for the pigeon part of it and have taken care of getting the coops to exhibit in, and whatever pertained to the welfare of the pigeon department.

TUMBLERS

My entire stock of high class Black Muffed Tumblers for sale, including 1st and 2nd old birds and 1st and 2nd bred 1907 at Hagerstown, Md., Oct. 15-18, 1907. All must go, 20 birds in the lot. Will sell Single birds, pairs or the lot. EDW. C. NOLL, 503 Tilgham St., Allentown, Pa.

BIRMINGHAM ROLLERS

The greatest flyers and performers of any variety of pigeons. I have been breeding the above variety for over 35 years and I guarantee them to be good breeders and swift rollers. For want of room I will sell mated pairs at less than half their value

746 W. Court Street **CHARLES LIENHARD** Cincinnati, Ohio

NISEQUOGUE STUD
White **FANTAILS** *Black*

A most select collection. Winners in England and America. A number of grand birds for sale at prices far below the quality.

Explain the quality of the birds you have for sale to a large audience, of well-to-do poultry men and doubtless you will make many sales.

an Ad in

talks to an immense audience of successful poultry fanciers, many of whom are wealthy men who breed merely for pleasure and who subscribe to this paper only. They are big spenders and if the quality of the stock offered is worthy of their attention we know of no better place to advertise it than in THE AMERICAN FANCIER.

In addition to the thousands of fanciers who subscribe to this paper we have thousands of readers who are beginners and just starting to raise poultry.

The Providence Show

THE 22d Annual Exhibition of the Rhode Island Poultry Exhibition was held at Providence, R. I., December 3 to 5. In the Poultry and Water Fowl classes a total of 855 entries were brought together. Barred Plymouth Rocks averaged about 8 to the class. The Whites were the banner classes of the show. Seventy-seven entries in 4 classes. Buff Plymouth Rocks brought out fourteen entries in the four classes. In White Wyandottes 43 entries in the three classes; 18 Buff Wyandottes. Columbian Wyandottes brought out 53 entries in the four classes of exceptional quality. Single Comb Rhode Island Reds, 47 entries in the four classes. Rose Combs, 34. Light Brahmas, 30. Game Bantams brought together Nelson, McIntosh, Hermitage Bantam Yards, W. H. Fitton, E. W. Cook, and J. W. Shonfield, and with such a class of exhibitors showing, the competition was rendered very keen. Following is the list of awards:

Some More Opinions about the Silver-laced Wyandottes of the Present

BY DR. H. A. LITZENBERGER

Having read several articles of the Silver-laced Wyandottes lately, it has become my desire to express my views or opinions of the same.

It is now almost ten years that I have been breeding Silver-laced Wyandottes. Presently I am not breeding the original variety, but am what we might term to a certain extent, a modified variety of this, the noble Wyandotte family.

First Prize, New York, January, 1907.
Owned by
The Brundage Wyandotte Farm.

About six years ago, when the wide-open-lacing craze embarked upon our continent from the British Isles, I wrote an article in The Fanciers' Gazette, published by Pierce Bros., of Indianapolis, informing the breeders of Silvers, the dangers they were going to confront, should they take a hold of this English variety of Wyandottes. But I have since come to the conclusion that very few breeders took my advice. I especially informed them that if they wanted to breed from this English blood, they had to discard type for the sake of color. But as it was everybody became crazed over the open-laced birds. On the contrary, I continued to breed the original variety, but what happened to me when I entered the contest in a show, was that I was knocked to pieces, not because my birds had type, but because they were lacking the open lacing. What had I to do, provided I desired to stay in the game? Why I had to discard of my typical birds, and get possession of the open laced or English variety. I did so and am breeding the English variety to the present day, having some very nicely laced birds. But as stated previously they are deficient in type, etc. They are not of the type that our original Silver-laced Wyandottes were and are, and I must say, that all the shows that I have attended

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st 2d and 4th hen, 1st, 2d, 3d and 5th pullets; $100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel, and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at **Madison Square, Toronto, Guelph, Chicago,** and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

408 WEST 23rd STREET, NEW YORK CITY

We Want Names

We want you to send us the names and addresses of from ten to twenty-five persons living in the United States, each one having twenty-five hens or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you **TWO BEAUTIFUL COLORED PICTURES FREE.** These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you would be pleased and delighted with them; no pictures will be given for a list of less than ten names.

We want to send a free sample copy of a special issue of the HOME MONTHLY (The National Poultry Journal), to a lot of poultry raisers who are not now taking our paper and for that reason we want these names.

Send us immediately a list of at least ten poultry raisers and we will mail you postpaid, **ABSOLUTELY FREE, TWO REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES.** Address, THE HOME MONTHLY, 607 West 43rd Street, New York, N. Y.

$200.00 IN SIX MONTHS FROM 20 HENS.

To the average poultryman that would seem impossible, and when we tell you that we have actually done a $500.00 poultry business with 20 hens on a corner in the city garden 30 feet wide by 40 feet long we are simply stating facts.

It would not be possible to get such returns by any of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new PHILO SYSTEM is adopted.

THE PHILO SYSTEM IS UNLIKE ALL OTHER WAYS OF KEEPING POULTRY

The New System Covers All Branches of the Work Necessary for Success,

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work, and any man or woman that can handle a saw and a hammer can do the work.

Our Six Months Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month.

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, the PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING gives full particulars regarding these wonderful discoveries with simple, easy to understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

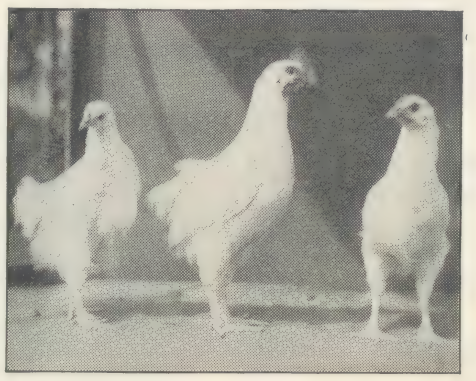
It also tells how to make a brooder for 25 cents that will automatically keep all lice off the chickens, or kill any that may be on them when put in the brooder.

Don't Let the Chickens Die in the Shell.

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 cents a Bushel.

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as to keep a cow without hay or fodder.



Our New Brooder Saves 2 cents on Each Chicken.

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically or kill any that may be on when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

and in many respects is just the reverse accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing here, three cents per pound above the highest market price.

Three pound White Orpington roasters 10 weeks old, raised by the Philo System. Note the large well developed feet and legs, and the width of the pullet showing the front view.

VALLEY FALLS, N. Y., Sept. 5, 1907.

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Poultry Keeping, and was surprised at the results accomplished in a small corner of a city yard. "Seeing is believing," they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

(REV.) W. W. COX.

Your system of poultry keeping should appeal to all poultrymen. The advantages of your system are many, and the quality of the large flock of poultry you have raised on your city lot is the best evidence of its success.

Binghamton, N. Y. GEO. L. HARDING.

ABINGTON, MASS., NOV. 15, 1907.

The Philo System Book received to-day. It is beyond doubt the best thing of its kind that I have ever seen. There are one or two single items that I consider worth the full price of the book. I will begin to-morrow to remodel my plant to follow the lines laid down in your book as nearly as possible, and next fall I hope to have the business reduced to your exact methods to keep a flock of about 150 fowls.

M. R. BOND.

JACOBS CREEK, PA., NOV. 25, 1907.

I received the Philo System Book mailed to my home address, Beechtree, Pa. I am highly pleased with it, and am anxious to spread the good news as far as I can. I am a preacher of the Gospel engaged by the Baptist Ass'n to do Evangelistic work. I am on the road all the time, have about fourteen days in each town. I am very much interested in the hen and will do all I can to help the other fellow to know HOW, and to spread the good tidings received in the Philo System.

(REV.) F. B. WILLIAMS.

The American Fancier

VOL. XXVII NEW YORK CITY, JANUARY 1st, 1908. No. 694

The Great Madison Square Garden Show. Dec. 17–21, 1907

The great Madison Square Garden Poultry Exhibition of December, 1907 has, in every sense, been the most successful ever held.

That it is as popular as ever with all ranks of exhibitors was fully exemplified by the splendid entry. The management is well known, and everything seems to run like clock-work.

Mr. H. V. Crawford was the beginning and the end, always to be found, and always in a position to direct. With such arrangements it was almost impossible for mishaps to occur.

Light Brahmas, which hold the honor of being first to be numbered each year, shows a falling off—only 35 entries in the four classes. The quality throughout was good, but nothing startling appeared. Dark Brahmas mustered together an entry of four in the two classes. Darks have never been a very striking lot at New York, and this year was no exception.

Buff Cochins, once a mighty class at Madison Square Garden, dwindled down to six entries in four classes.

Partridge Cochins brought eight entries, all from the same owner, but the quality was as fine as human skill can produce.

Langshans did better—twenty-four in four classes. They are in good hands, and should improve.

The American classes brought the real goods together, and great interest was shown in the awards.

Barred Rocks, Cocks 38 in number, with all the big ones showing. Hens, 56 in the class. Cockerels, 64 on parade, and the banner class. Pullets, with 75, all eager for the premium.

White Rocks were out in full force—156 entries in the four classes.

Buff Rocks—14 cocks, 13 hens, 19 cockerels, 20 pullets. Partridge turned out 29 in the four classes.

Wyandottes came in for the admiration of all that visited the Garden in all 430 being exhibited in the following varieties: Silvers, Goldens, Whites, Black, Buff, Partridge, Silver Penciled and Columbian.

Ten years ago there was not a Rhode Island Red in the show; this year there were 128 in the single classes.

Other classes that have grown wonderfully at New York are the Orpingtons—237 single entries of the different varieties of Orpingtons is an indication of their great popularity.

Leghorns made a grand display and upheld the reputation already gained. Both Browns and Whites brought out some really grand specimens.

Minorcas held their own, both in quality and number.

Hamburgs, Polish, Houdans, Faverolles and Lakenvelders was real good in quality, but the number was nothing wonderful.

Games and Game Bantams did not appear to be as strong as usual.

Ornamental Bantams alley had quite fine quality, but hardly an improvement on former years.

Water Fowl and Turkeys were out in goodly numbers, and some wonderful birds were shown in these classes.

The different classes will all be thoroughly gone over by those competent to discuss them in further issues of The American Fancier, but at the time of this writing it was simply impossible to give the complete write-up which is necessary at a show of such importance as New York.

Leghorns at Madison Square Garden

(Week of December 17th to 21st, 1907)

By W. Theo. Wittman

In penning this report the writer is thoroughly alive to the fact that his data and impressions were gathered mostly without that paramount privilege of the judges who placed the awards—of handling and comparing the specimens. Therefore, while written without fear or favor, the reader will allow accordingly.

On the other hand, there were some regretable and only too evident errors and other doings which space in this report will not admit of the extended notice and discussion they deserve, and may get later on in these columns.

In S. C. White Leghorns there were more entries even than last year. More good birds, for, as a whole, birds that were exceptional in concave, sweep of back, in comb and in whiteness of plumage were the rule.

1st Cock very clean, smooth in condition, plumage, face and lobes.

S. C. White Leghorn, the property of G. S. Moore.

2nd would not or could not show his quality.

3d out somewhat in length of leg, and might have changed places with 5th by the same owner.

4th, an extra shapely one.

1st hen was ideal Leghorn size, and almost ideal type, but just a bit soiled and short on condition and leg color.

2d was an all-round jewel, a bit small.

4th, same owner, white and very neat, clean, and almost pullet-like in appearance.

5th, same owner, very different from the two others; coarser and was lucky in the place she got.

3d, the ideal size of 1st, with much shapeliness in back and tail.

1st ckl. almost as good as they are able to make them, on paper—which is saying a good deal. Not an angle anywhere, good leg color, lobes as fine as any Hamburg ever carried, and small comb to carry out his perfect proportions. The specimen, as a whole, being on the small order.

2d poor, especially poor in comparison to a whole lot of birds left out.

4th, by same owner, a good one and might have been 2d and no fault found.

3d and 5th well placed, although the former evidently had a trace of straw color.

1st pullet deserves all the praise I give 1st ckl., and perhaps even more, for she was just about correct size.

1st, 2d and 3d, two owners, very much of one type, while 4th was of the type and size of 2d hen, same owner.

15 exhibitions yards, great big in quality, but as I utterly failed to follow the judge in some of the decisions, I omit all remarks.

R. C. White Leghorns just about enough to fill the classes. 1st cock and 1st ckl., by an old, experienced exhibitor, being the bright particular stars.

S. C. Brown Leghorns like White larger classes than even last year, but as to quality it is a question if the males, particularly, are the equal of the grand, richly colored and sized birds of half a dozen years back.

Cocks and ckls. seemed to be lacking in brilliancy of color or in evenness of same, or in size or in type all down the line, with awards practically above criticism.

Hens, 1st was beautifully trained and slim, and a good one.

2d was reddish, shafty and although beautifully even in fineness of stippling, was not to be compared with another hen by same owner, unplaced.

3d not worthy

4th and 5th by two owners, but I doubt if either one could select as his best those selected by the judges (I say judges because of the fact that Browns were judged by a "committee.")

Pullets, 1st went to a beautifully brown backed one; 2d to something radically different; 3d, another jump, winding up at 5th with perhaps as useful a pullet as there was in the whole bunch.

Pen awards were evidently mostly decided by the male birds they contained. Those in 1st and 2d pens easily leading in the order named.

Rose Comb Brown males are about where single combs are. 1st cock was a notable exception. The rose comb classes were good size, and for rose combs included plenty of quality.

Particular mention should be made of those in the money awards in the female classes. They stood high in quality.

S. C. Buff Leghorns (no Rose Comb Buffs shown this year) were slightly short in numbers, as compared to last year, but I understood there were fully as many or more extra good ones. The awards seemed to give good satisfaction, 1st cock being a good golden buff color, and a good all-round bird.

2d very slick appearing and finely finished with one even shade, on the dark order.

3d a very logical decision and so on down the line.

1st hen holds her color well and 2d is very even, while 3d is a fine big, even-colored one. A fine string are the winners, with an extra good colored one or two unplaced.

Ckls., 1st, a most showy color and typical size.

2d on the small order, but a dandy in shape and style. I cannot remember seeing his equal in this in Buffs.

3d a great big one in comparison; very good color.

4th and 5th good birds.

Five pens, same as last year. I liked 1st pen.

S. C. Duckwing Leghorns just about filled the classes. All the old cocks showed too much gold color. The hens were a nice lot, and the ckls. are extra showy, silvery and typically-shaped bunch.

1st pullet grand in size and tip color, but fails woefully in breast color. With a good breast she would be a wonder. Her owner, while something of an amateur in this variety, was the best winner of all in the Leghorn varieties, capturing the five blues.

S. C. Black Leghorns brought out two magnificent cocks in 1st and 2d. A good bunch of hens in the five ribbon winners and ditto some grand ckls. and pullets. There is a reason for Black Leghorns looking up in popularity, now that they show up with typical Leghorn size, grand top and leg color.

Minorcas at Madison Square Garden Show

By Geo. H. Northup, *Judge*

The Minorca entries at Madison Square Garden were as follows: ninety-four Single Comb Blacks, sixty-four Rose Comb Blacks, and nine Single Comb Whites. These classes were all made up of exceptionally fine birds, and out of the whole one hundred and seventy-nine only two were disqualified, which is an unusual occurrence in such a large exhibit. With the two exceptions mentioned every bird was a credit to its owner, and in a score card show each and every specimen would have scored high enough to have won 1st had the competition not prevented it. Thus the Minorca exhibit was a show of goodly numbers and unusually good quality.

There was nothing in this exhibit to demonstrate any object in lowering the standard weights of Minorcas for the birds fitted the new standard weights and would have been at a disadvantage under the old weights and all were sprightly birds and of good type, and none of them could properly come under the head of "Clumsy, Awkward and Ungainly," which some breeders are wont to warn us will happen if we breed Minorcas to the weights of the new standard.

In Single and Rose Comb Blacks, every prize down to and including the fifth was strongly contested for by its

Further reports on the judging of the different classes will appear in the Jan'y 15th issue.

next lower competitor, and in many cases the competition was so close as to make it necessary to hold the contestants side by side and examine them, section by section. In Single Combs the 1st and 2d winners were almost perfection in both color and shape, making a little deviation in one or the other decide the winning.

The Rose Comb Blacks were the largest class of that variety yet seen in Madison Square Garden. If the show had been held a little later some of the awards on the young birds would have been placed differently, and some which did not get a place at all would have been among the winners, because they were not old enough to show at their best, while some of the young Rose Combs were fully matured.

The White Minorcas, while only few in numbers, were excellent in quality and the great favor in which Black Minorcas are being held will certainly extend to the White Minorcas speedily, and I believe the time is not far distant when we shall see large exhibits of the Whites as well as the Blacks in our most important shows. They certainly deserve to stand among the first of all while varieties.

The special meeting of the American Black Minorca Club was pleasant, interesting and instructive to the members present. Much good to the club is sure to result from the discussions which were entered into and many good suggestions were offered in regard to shaping the future plans of the club, which will be brought up for further consideration at the annual meeting at Cleveland.

Indian Games at Madison Square

By Dr. J. S. Wolfe

This display of Indians at the Garden this year reached the grand total of 83 specimens, divided as follows: Cornish, 26 in open class and 4 pens; White, 25 in open class, one pen, and one display of 6 females and one male.

This good display of both Cornish and White shows that this grand breed is coming up to the high position which their many excellent qualities deserve. And the Cornish breeders will have to keep hustling, for the Whites are pressing them hard for true Indian quality, as was shown at this show by the 1st cock, 1st and 2d hens and the fine type shown in the birds in the display.

Cornish Cocks—Six. 1st, an ideal bird in both type and color. His equal has perhaps never been shown at the Garden. A true show bird in coop, being so well trained that he shows himself to best advantage in any position required by judge. Reminds one of Carpenter's old Rajah in this respect. 2d, very similar in all respects to 1st. Does not pose quite as well. Fails to 1st in carriage of tail. 3d, a fine, large bird of correct type and excellent color. Fails only in comb to the two above him. 4th, another bird hard to criticise. Good in type and color. Not shown in quite as hard condition of feather as the others. These four birds are all cracker-jacks and are a credit to the breeders who produced them. 5th, a good, large bird, fails in condition.

Hens—Nine. A beautiful specimen of modern Indian female; standard weight; standard type and the most perfect double lacing in all sections of any Indian female shown at the Garden since Bickwell and Whiting showed their winning hen "Columbia," in 1902. A good head and very fine color throughout. Legs extra good in color. Shanks might be a trifle shorter. 2d and 3d, both large hens, over standard weight. Excellent type and good color. Both inclined to triple lacing in some sections; both shown in good condition of feather. 4th, an old hen, failing with age. Has been an old winner, and is a good hen yet. 5th, a hen of good shape, but fails in distinctness of lacing.

Cockerels—Six. 1st, a grand, large bird of proper type and color. Comb his worst defect. 2d, not quite as good type as 1st; sound in color. 3d, strong in head, good shape and fine in color; would have gone higher but for lameness of left leg, on which he would not stand straight when in repose. 4th, similar to 3d, but not as good in type. 5th, a nice bird in color, not yet matured, therefore lacking in fullness of body.

Pullets—Five. 1st, the gem of the class. A splendid bird in color and lacing; good type and standard size. 2d, similar to 1st in shape, color and type. Fails to 1st in lacing. 3d, 4th and 5th, all good, fair birds, failing in distinctions of markings.

White Indians: Cocks—Six. 1st a grand, low down, blocky bird of true type and white plumage. Perfect in head points. A full, round breast, with thighs set well apart. A beautiful, flowing tail, carried at correct angle. Our only criticism of him is that his back is a little too convex. Such birds as this will surely improve the breed in true Indian type, as the one glaring fault that the white breeders have been trying to cover is too great length of shank. 2d, also a grand bird in shape and pure white color. A larger bodied bird than 1st. Fails to 1st in head and length of leg. 3d, a splendid, large bird; fails in beak and type to 2d. 4th, a good, white bird; fine body; beautiful tail, well carried. A good deal of white in lobe, which put him back of 3d. 5th, a good bird, fails some in true Indian shape.

Hens—Seven. 1st, a fine bird with exceedingly white plumage. Good type; failing some in head. 2d, one of the best in type ever shown. A large, blocky bird; plumage good. Was not in her best show condition the day of judging. 3d, 4th and 5th, all splendid birds with good, white plumage.

Cockerels—Six. The best type bird of the class, with good comb and clean plumage. 2d, much like first in type and color; fails in head points. 3d, 4th and 5th, all good cockerels, but not low enough down to be of correct type.

Pullets—Six. 1st and 2d, both fine birds that look like sisters. 2d fails to first in color or eyes. 3d, 4th and 5th, all nice pullets of fair quality. Will be better when fully matured as hens.

Pen—One. This pen contained 6 of as fine females as was ever shown. One hen in particular took our eye as being a very typical Indian. The male was large and of very fine type, with good, hard, white plumage.

Cornish Indians. Pens—Four. 1st, a pen of four hens of large size and beautiful lacing. Fail some in ground color of feathers. The cock in this pen was a grand specimen of Cornish Indian. 2d—three females in this pen were of extra good quality, the fourth, not so good. Darker birds than females in 1st pen. The cockerel in this pen does not equal the cock in 1st pen, although he is a fine bird. 3d—The four hens all fine, large specimens; extra good type. Fail in color and clearness of lacing in some sections. The cock a fine, large bird; a trifle too red in hackle for a show bird. 4th—Fail to the others in size and color of legs in females. Cockerel a good one.

Hamburgs at New York

By Dr. J. S. Wolfe

The Hamburg display at the Garden Show consisted of forty-seven specimens of which thirty were Silver Spangled. And when we say that the yards of Paine, Tunnecliffe, Oke and Wolfe were represented, the quality of the exhibit is at once assured as being of the highest that could be produced.

Golden Spangled had one entry in each class, all being fine specimens in type and marking.

Silver Spangled: Cocks, three. First, a fine bird of excellent type. Good head points, perfectly spangled breast and a long, flowing tail, carried at correct angle. Failed some in hackle and saddle. 2d—A large, shapely bird, good comb, lobes large, round and very free from wrinkles for an old bird. Tail not yet fully out. 3d— fine, large bird, well marked, but shown in poor condition of tail, both sickles being out. In good condition would have gone higher.

Hens—Five. 1st, a gem in size, type and markings. Only lacks sheen to be a wonder. Shown in fine condition. 2d, a large hen; spangles of correct shape, but smaller than 1st. Not as clear in white on back as 1st hen. 3d, a hen, splendid in color and shape. Spangles too small. 4th, similar to 3d, but fails in spangling. 5th, a good hen, failing in spangling on back.

Cockerels—Five. 1st, the best developed bird in the class; clear tail, good shape. 2d, a younger bird, fine in head points and color. Will be better later. 3d, good clear white, but fails in wing bars and on breast. Hackle remarkably good for light bird. 4th a large bird with coarse comb. Fails badly in spangling of hackle, back and saddle. No. 1972 was the best bird in class, thrown out because of stubs.

Pullets—Seven. 1st, a splendid bird in every respect. Medium in size. Wins color special for females. 2d, similar to 1st, but lacks development, especially of comb. 3d, a good one, of correct type. Fails in spike on comb and spangling on back. 4th and 5th fail in markings, and size of spangles, but both nice females.

Golden Penciled had one good bird in each class except hens, which had two. All five birds of extra quality.

Silver Penciled and Blacks each had one good specimen in each class.

Pens—Two. 1st contained four females of extra fine quality, of large size and good markings of correct shape. Male was a cock of much quality. Had as good hackle, back, saddle and breast as was ever shown in the Garden. Fails in comb. Lobes large and round. Tail very full of coverts, but carried a little high. 2d—Females of good quality. male, a cockerel of very medium quality.

Corfu, N. Y., Show.

The fifth annual exhibition of the Corfu Fancier Club was held in the Opera House, December 3-6, and while the entries were not quite as large as last year on account of the Buffalo show following so close, the quality was gilt-edge in most of the classes, a great many of the birds being tried out for Buffalo and other big shows. The Corfu Association is made up of a hustling lot of fanciers, and reflects great credit on the management, when a town of 500 inhabitants can hold a show five years in succession and come out on the safe side of the balance sheet. The classes were all well filled, the greatest interest being centered in White, Buff and Brown Leghorns, and Rhode Island Reds, the winners in these classes being entered in Buffalo the following week, where the owners will again seek each others scalps.

H. E. Stevens and Chas. Phelps divided the honor in R. C. R. I. Reds. Mr. Phelps, 1st pullet and 2d ckl. having wonderful under color, the pullet also winning club ribbon for shape. Mr. Stevens winning the balance of the specials for shape and color on males.

Mr. Ewald, winner of the State Cup at Auburn last winter, and Mr. Cox, recent winner at Jamestown Exhibition. were each credited with three firsts at Corfu on Buff Leghorns. Each showed magnificent specimens and are slated to fight it out at Buffalo next week. Watch the smoke.

Black Minorcas were shy in numbers, but the quality of the exhibit of Mrs. Ingraham & Son was strictly in line with the biggest shows, their birds showing the correct type and that soft, greenish sheen color so desirable to breeders of minorcas.

That new 20th Century Fowl Buckeye Reds was on exhibition by Franklin E. Phillips of Pembroke, who speaks very highly of their laying qualities and the evenness of color was much better than we have ever handled before.

The Prue Strain of White Wyandotte again showed their winning qualities, taking four first premiums. Mr. Colby recently purchased the entire stock and good-will from Mr. Prue and can show many an older breeder where to get off when it comes to showing birds in condition. A list of awards follows.

ANCONAS—Emory E. Banks, 1st cockerel, 1st pullet, 1st pen.

LIGHT BRAHMAS—Emory E. Banks, 1st cock, 2nd hen, 1st cockerel, 1st pullet, 1st pen. Albert G. Ladd, 2nd cock, 1st hen, 2nd cockerel.

BUCKEYE REDS—Franklin E. Phillips, 1st cockerel, 1st pullet, 2nd cockerel, 2nd pullet.

BLACK JAVAS—Carl Nye, 1st cockerel, 1st, 2nd, 3rd, 4th pullet, 1st pen.

S. C. WHITE LEGHORNS—Eugene Harrington, 1st cock, 1st and 2nd cockerel, 3rd pullet, 2nd pen. Mrs. C. S. Whiting, 2nd, 3rd and 4th cock, 1st, 2nd, 3rd and 4th hen, 3rd and 4th cockerel, 1st, 2nd, 4th pullet, 1st pen fowls, 1st pen chicks. Bert Rowley, 3rd pen.

S. C. BROWN LEGHORNS—James D. Cook, 1st and 2nd hen, 2nd cockerel, 1st and 2nd pullet. E. S. Snider, 3rd hen. Wm. P. Safford, Perry, N. Y., 4th hen, 1st, 3rd and 4th cockerel, 3rd and 4th pullet, 1st pen.

R. C. BROWN LEGHORNS—E. S. Snider, 1st cock, 1st and 2nd hen, 2nd cockerel. H. E. Stevens, Corfu, N. Y., 1st cockerel, 1st pullet.

S. C. BUFF LEGHORNS—Wm. Ewald, Jr., 1st cock, 1st hen, 2nd and 3rd cockerel, 1st and 3rd pullet, 2nd pen. A. B. Cox, 2nd cock, 2nd, 3rd, 4th hen, 1st and 4th cockerel, 2nd and 4th pullet, 1st pen fowls, 1st pen chicks.

S. C. BLACK MINORCAS—Chas. Ingraham, 1st, 2nd and 4th cockerel, 1st and 3rd pullet, 1st pen. Mr. P. Messenger, 2nd and 4th pullet. Mr. Ross, Corfu, N. Y., 3rd cockerel.

S. C. BUFF ORPINGTONS—Wm. Nehrboss, 1st cock, 1st and 2nd hen.

S. C. R. I. REDS—D. W. Schucker, 1st cock, 1st hen, 1st pen fowls. E. S. Snider, 2nd cock, 1st cockerel, 3rd pullet. H. E. Stevens, 2nd and 3rd hen, 2nd cockerel, 1st and 2nd pullet, 1st pen chicks. Chas. Johnson, 3rd cockerel.

R. C. R. I. REDS—H. E. Stevens, 1st cock, 1st and 2nd hen, 1st and 3rd cockerel, 2nd and 3rd pullet, 1st pen fowls, 1st pen chicks. Chas. Phelps, 2nd and 4th cockerel, 1st and 4th pullet, 2nd pen. Franklin E. Phillips, 2nd cock.

BARRED P. ROCKS—C. W. Pfistner, 1st cock, 1st hen. Henry P. Eagan, 2nd and 3rd cock, 3rd and 4th hen, 4th cockerel, 4th pullet, 2nd pen. Frank Smith, 4th cock, 2nd hen, 1st and 2nd cockerel, 1st pullet. Wm. Norton, 3rd cockerel, 2nd and 3rd pullet.

WHITE P. ROCKS—Hiram Holmes, 1st hen, 1st and 2nd cockerel, 3rd pullet. G. M. Soverhill, 1st and 2nd pullet.

BUFF P. ROCKS—George H. Sweet, 1st and 2nd cock, 1st and 2nd hen, 1st and 2nd cockerel, 2nd and 3rd pullet, 1st pen fowls, 1st and 2nd pen chicks. E. T. Summer, 1st pullet.

COLUMBIAN ROCKS—C. S. Whiting, 1st cockerel, 1st and 4th pullet. George H. Sweet, 2nd and 3rd pullet.

WHITE WYANDOTTES—G. R. Colby, 1st and 2nd cock, 2nd, 3rd and 4th hen, 1st and 4th cockerel, 1st and 2nd pullet, 1st pen. E. B. Peck, 1st hen, 2nd cockerel, 3rd and 4th pullet, 2nd pen. Geo. Priersick, 3rd cockerel.

BUFF WYANDOTTES—C. M. Augenstein, 1st and 2nd cock, 1st and 2nd hen, 1st and 2nd cockerel, 1st and 2nd pullet.

COLUMBIAN WYANDOTTES—Mrs. C. S. Whiting, 1st, 3rd and 4th cock, 1st, 2nd. 3rd and 4th hen, 1st, 2nd, 4th cockerel, 1st, 2nd, 3rd and 4th pullet, 1st pen fowls, 1st, 2nd and 3rd pen chicks. Chas. E. Rockwood, 2nd cock, 3rd cockerel.

Geo. W. Webb.

Mr. F. T. Weatheril Complains About Judging.

The American Fancier,

Dear Sir:—

I have taken The American Fancier for a good many years and have enjoyed a good many articles from its columns, and eagerly await the coming of every issue, and when I get it, commence at A and read it clear through to Z. I have been reading of late with great interest the battle of words between Judge Denny and N. V. Witbeck, also the articles on Judges and Judging, their methods, preferences and prejudices, and what has been termed their honesty and dishonesty, which has brought to my mind with great force a case which came under my knowledge and observation. In the Fall of 1906, at the Saratoga Country Fair, held at Ballston Spa, there was a good exhibit of poultry of which John Blunck, Mr. Plantz, Jesse F. Snow, and Chas. Blodgett were the largest exhibitors. There were also a lot of other exhibitors, showing a few birds each. I was attending the show in the capacity of an assistant to the Superintendent, D. D. Hubbs. It was my duty to feed and water the birds and to assist while judging. Also of tieing the premium tags on the winning birds, so that I had a chance to see and hear. The Judge went to work placing the awards, and as his duty progressed, the name of a certain variety was called for by the clerk. There were but two exhibits and the Judge asked where they were. The owner of one bird, said, "Here is mine." The owner of the other said, "My bird is in the house." The Judge then asked, "Which has the better bird." One replied, "His is the better," and therefore the awards were so placed without being looked at. And then another instance. There were two exhibits of a certain variety, and when called for, the Judge happened to be close to one of the birds and after looking through the wires at the bird a moment, asked where the other bird was. He was told it was in the house, some little distance. He said, "Well, give this one 1st, and I will look at the other bird when I go in the other house," but he evidently

never looked at the other bird. When the clerk got down the list and called for Brown Leghorn Hens, of which there were three exhibits, one bird owned by Mr. Plantz, the other two belonged to myself. Mr. Plantz's bird was brought and placed in the exhibition coop by the attendant, W. C. Mort, and the Judge reached out his hand, took one of my birds and immediately handed her back, saying, "The bird is disqualified, owing to crook in breastbone." He then took the other hen and almost immediately, and without taking Mr. Plantz's bird out of the coop, and without seeing if Mr. Plantz's bird had the same failing, he said, pointing to the bird in the coop, "Give her 1st; this one 2d." As further evidence of the dishonesty, inconsistency and ignorance of this Judge, he had but little, if any knowledge of the Standard, as a crook in the breastbone does not disqualify, as the same disqualified Hen had won 1st as a Pullet and four 1sts as a Hen, two of them being at different times, and at two different places was awarded 1st to this same bird by the same Judge. After the awards (not the judging) were completed and while in conversation with the other exhibitors, Mr. Plantz said to me, "You should have had 1st on that Hen. She is the best of the three."
